

0050 Fundamental Quality & Valuation Model v0.1 — Executive Summary

Current constituents only. Historical tests carry survivorship bias, conservative filing-date proxies, and secondary-source adjusted returns.
No Fundamental Score, Quality Score, Technical Score, Total Score, or weighted ranking is produced.

0050 Current State Matrix (no composite score)

1. Price + fundamental-state transitions

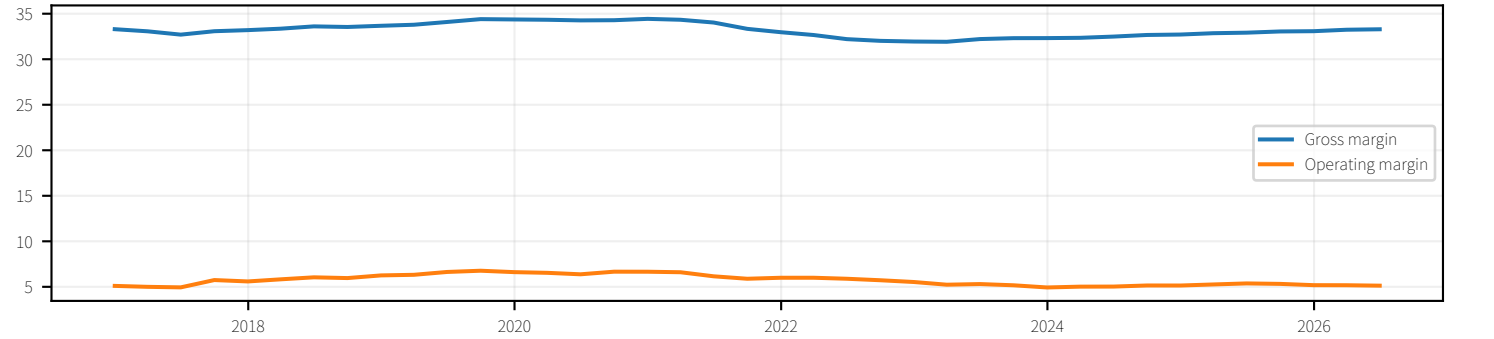

2. Revenue / revenue growth

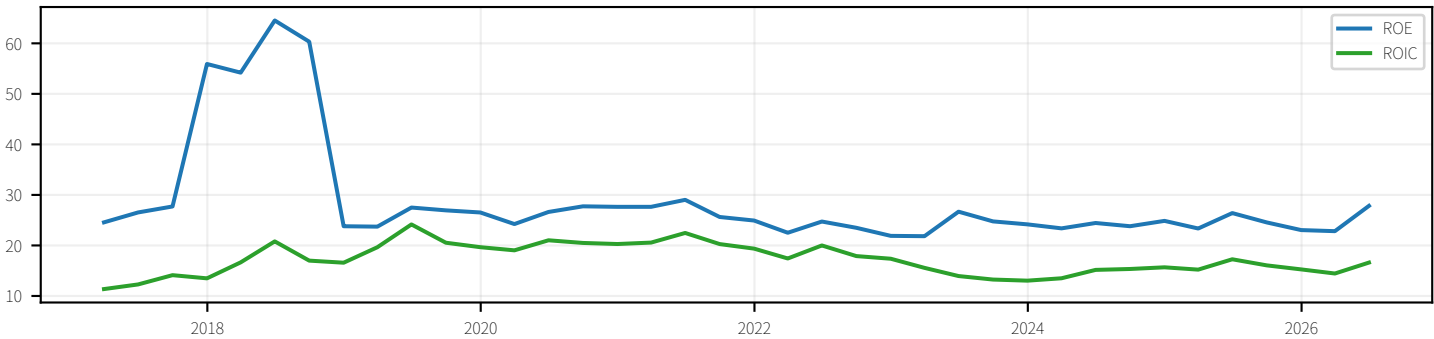

3. EPS / TTM EPS

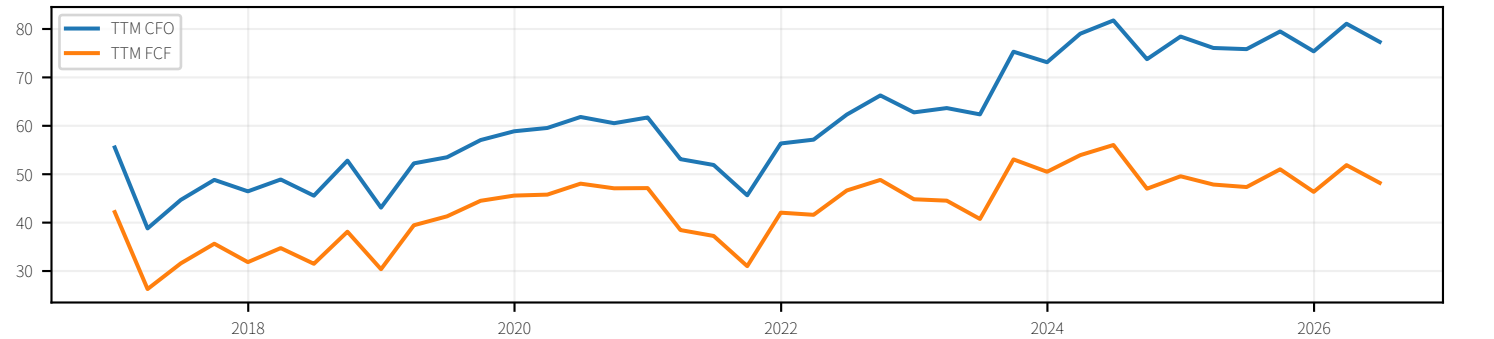

4. Margins (%)

5. ROE / ROIC (%)

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

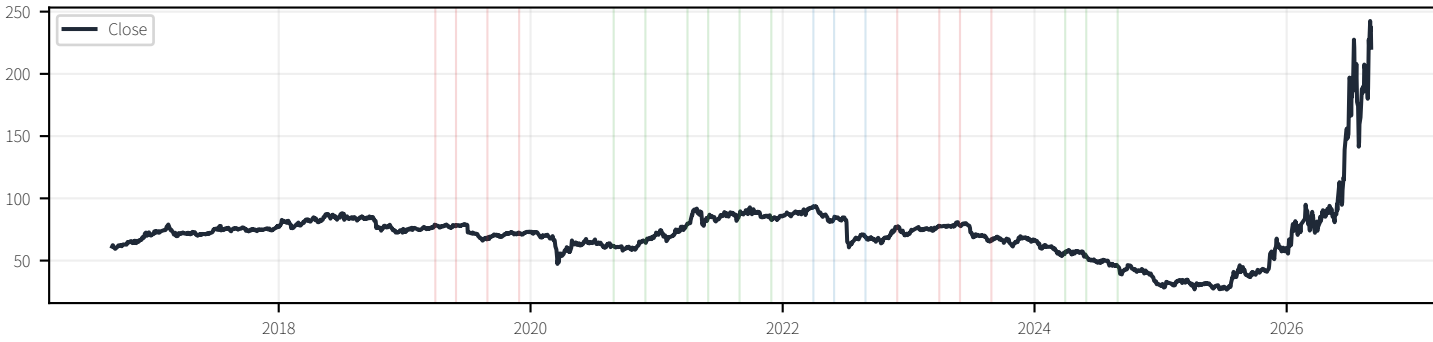

8. P/B / dividend yield

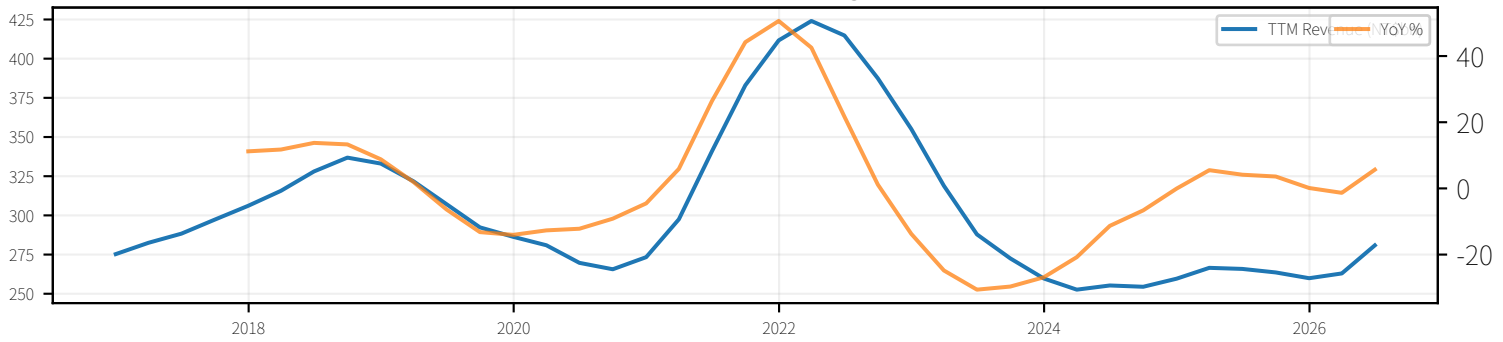

Quality: ROE, ROIC and operating margin meet the durable-profitability gate; Revenue and EPS grew over three years without contradictory FCF evidence; Operating cash flow supports earnings and free cash flow is persistent | State: Revenue direction is weakening with EPS or margin-and-cash-flow deterioration | Valuation: P/E is in the lowest historical quartile with P/B or positive-FCF corroboration

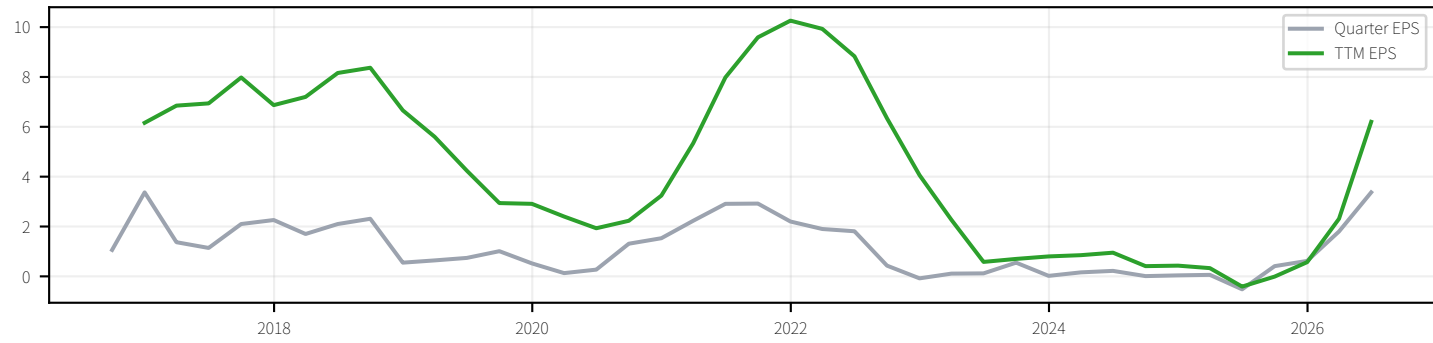

1. Price + fundamental-state transitions

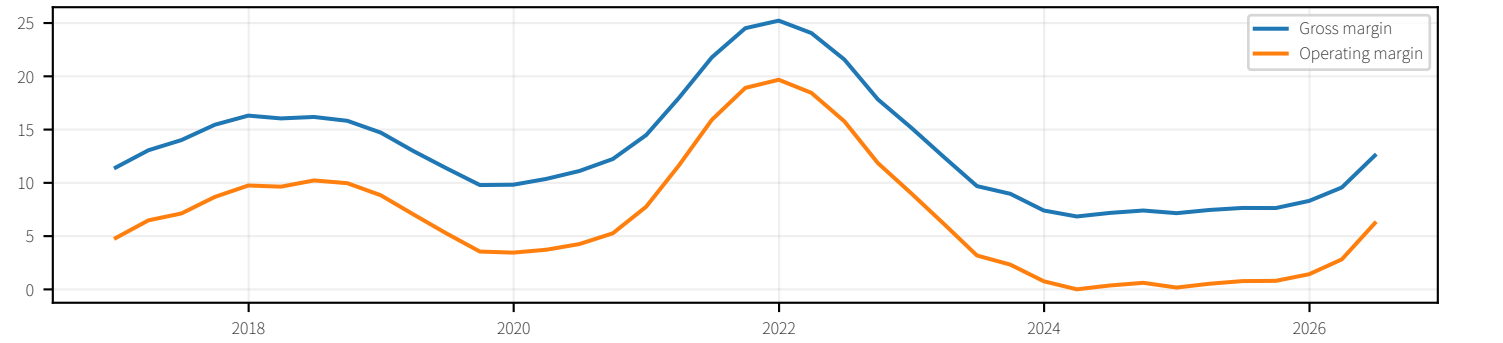

2. Revenue / revenue growth

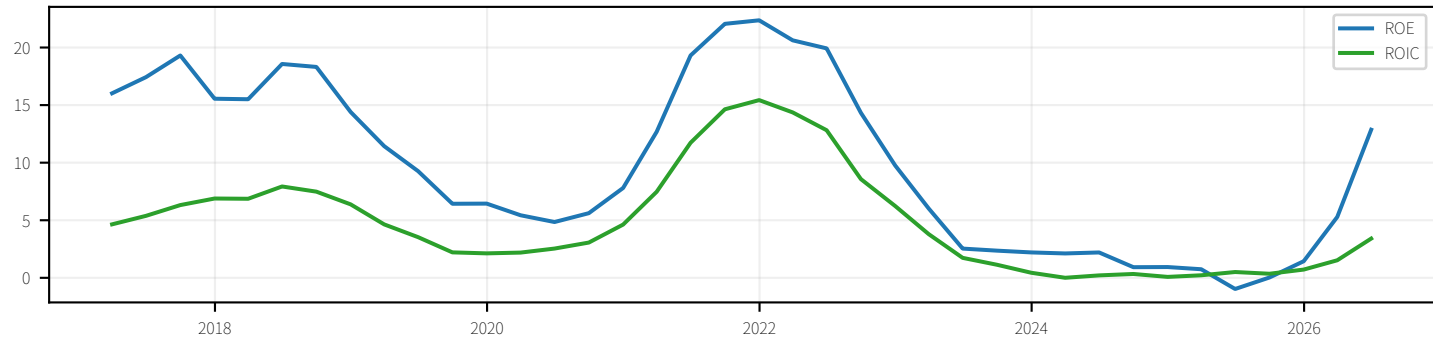

3. EPS / TTM EPS

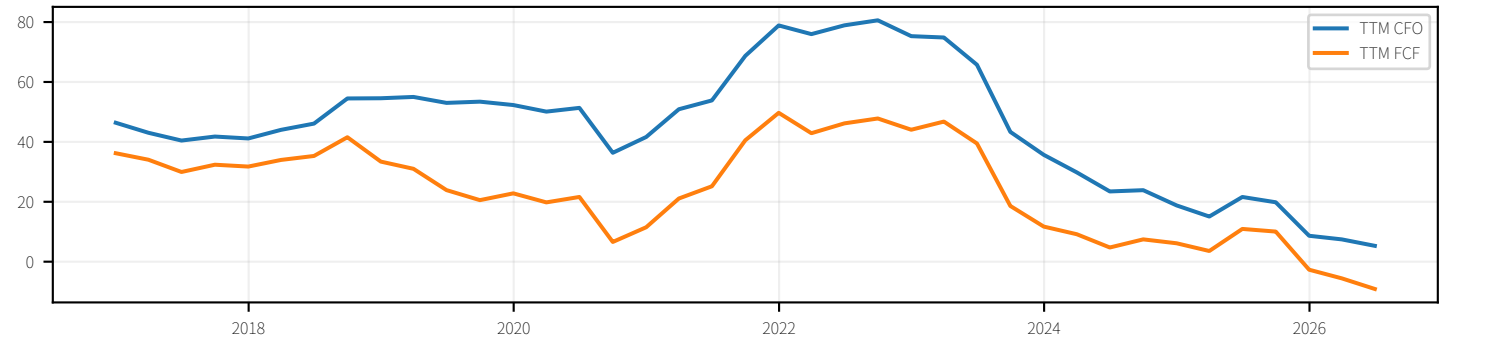

4. Margins (%)

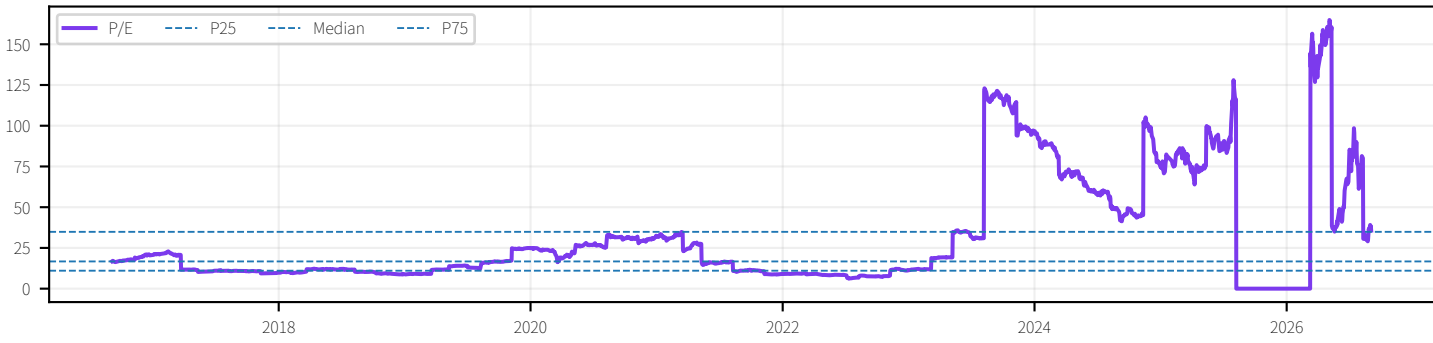

5. ROE / ROIC (%)

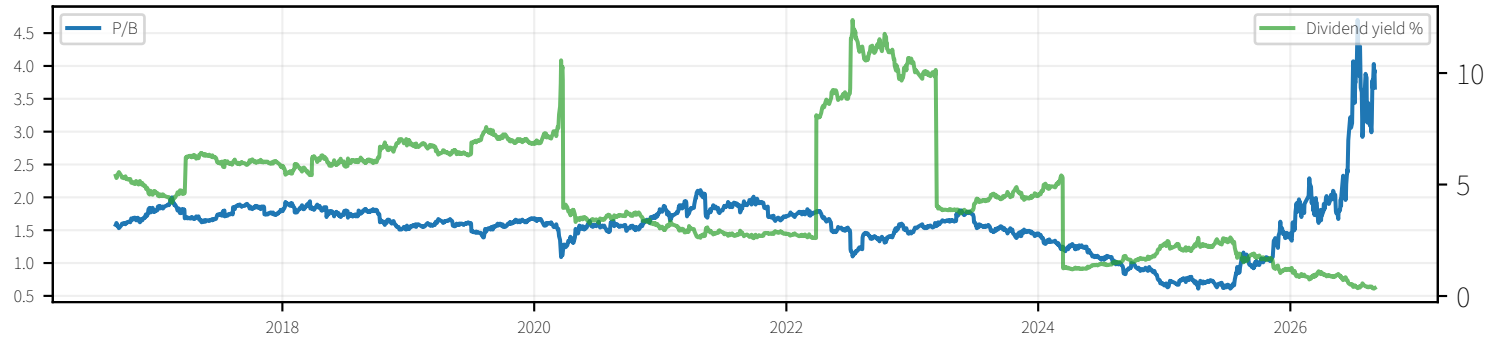

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

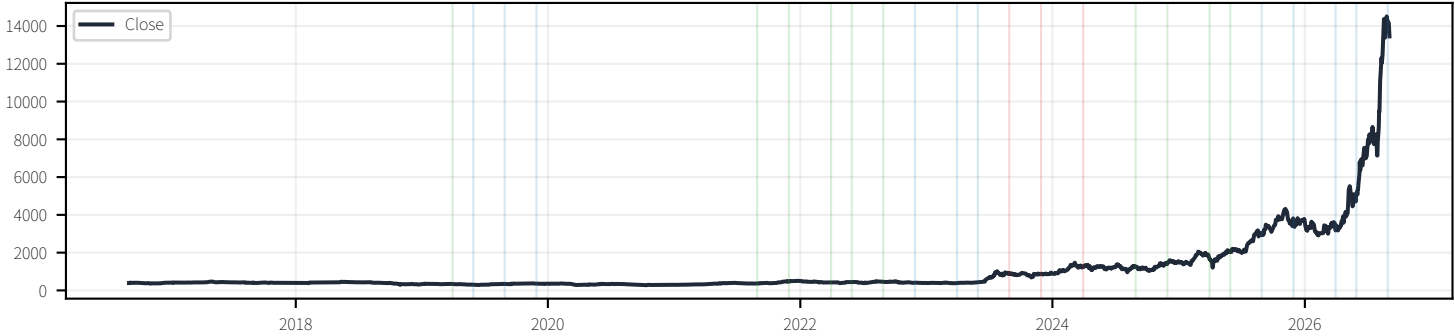

8. P/B / dividend yield

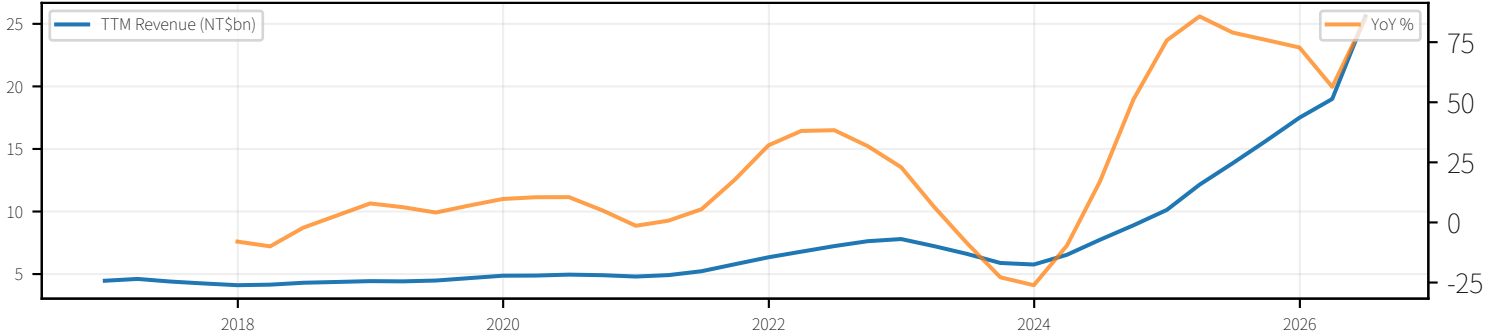

Quality: Operating cash flow supports earnings and free cash flow is persistent | State: Mixed fundamental directions do not satisfy a named state gate | Valuation: Normalized P/E is above the historical upper quartile; Current P/E is materially below normalized P/E; peak-earnings distortion is possible

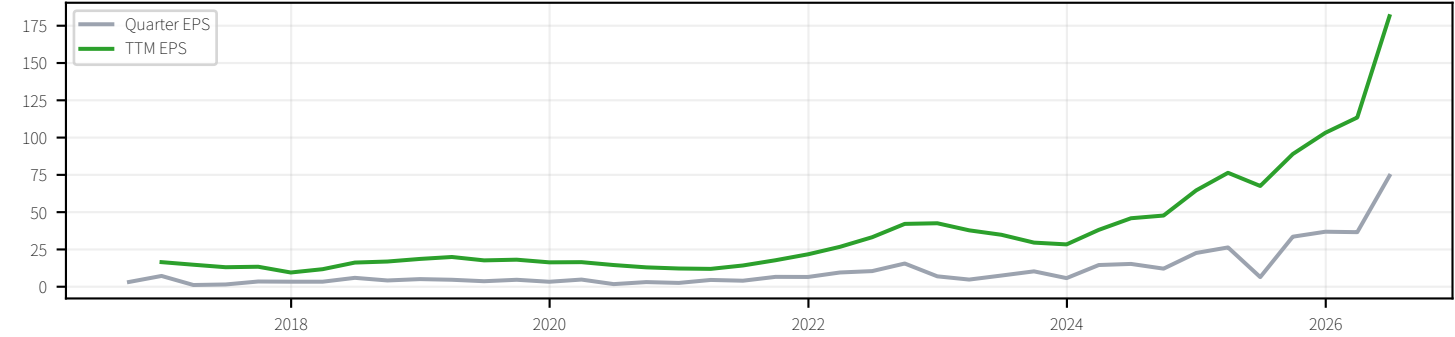

1. Price + fundamental-state transitions

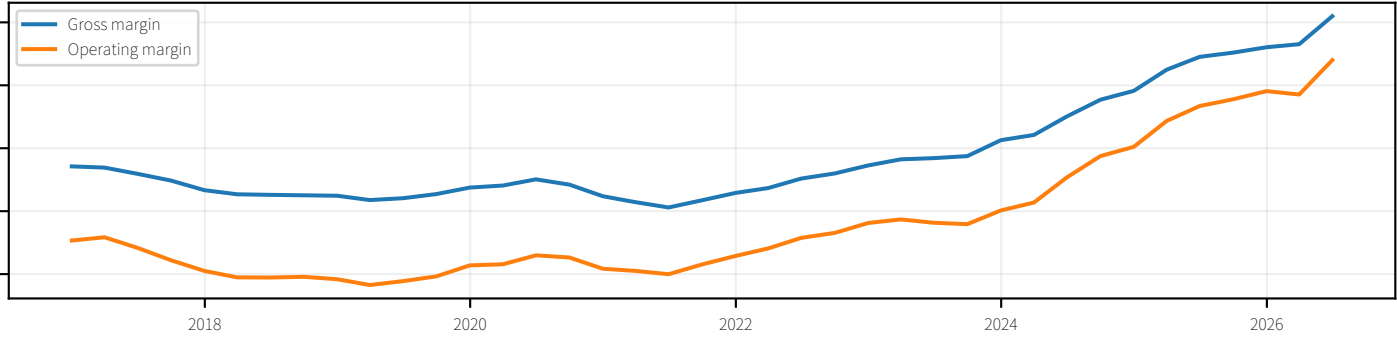

2. Revenue / revenue growth

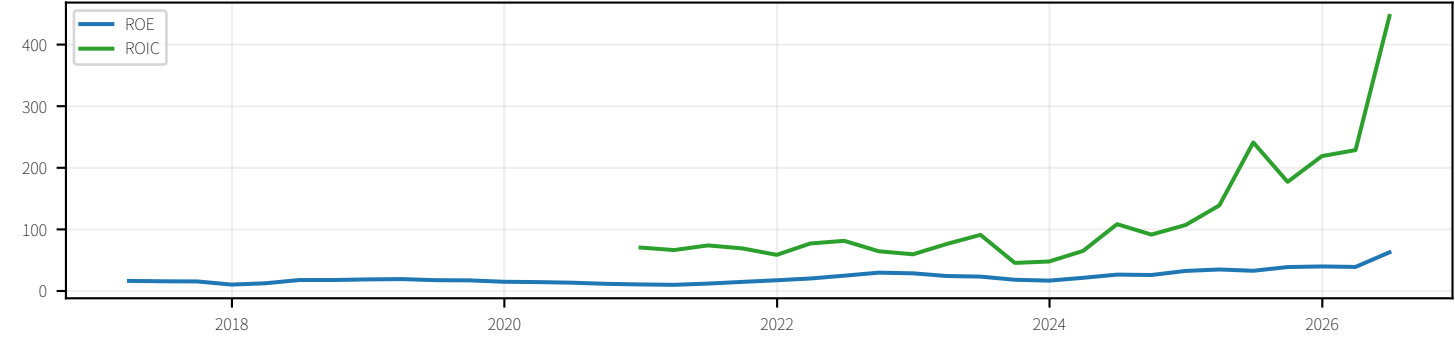

3. EPS / TTM EPS

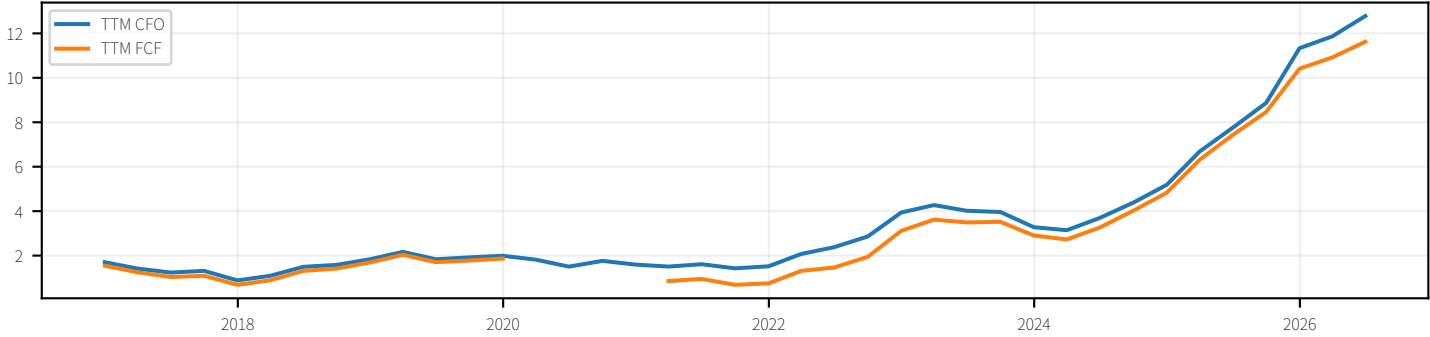

4. Margins (%)

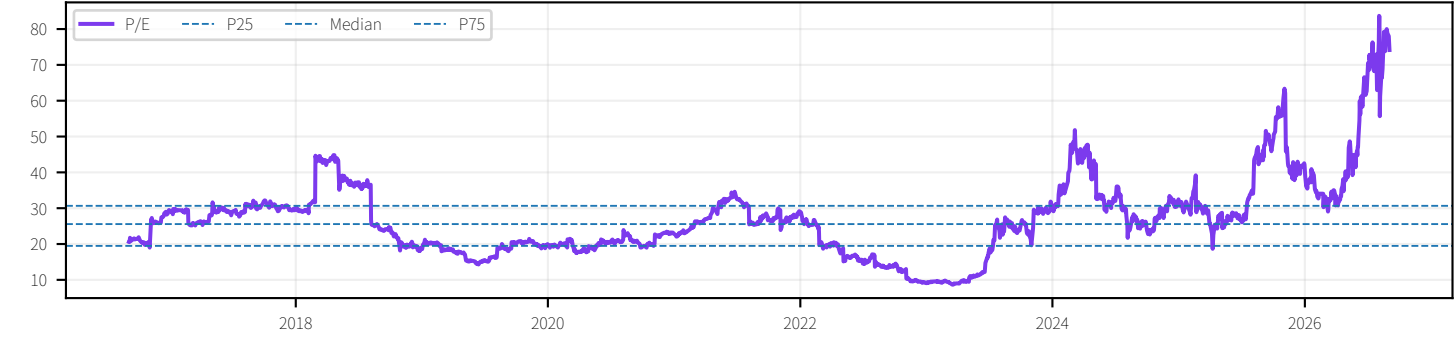

5. ROE / ROIC (%)

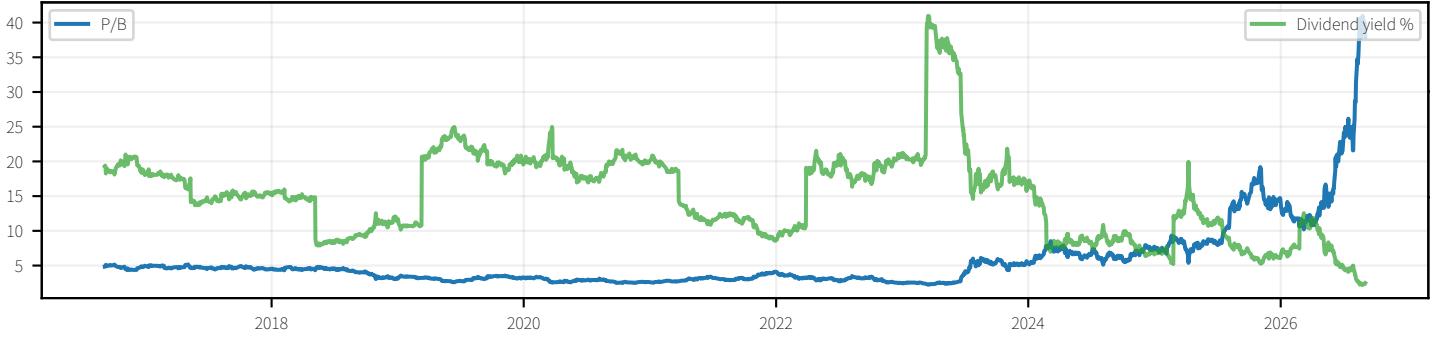

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

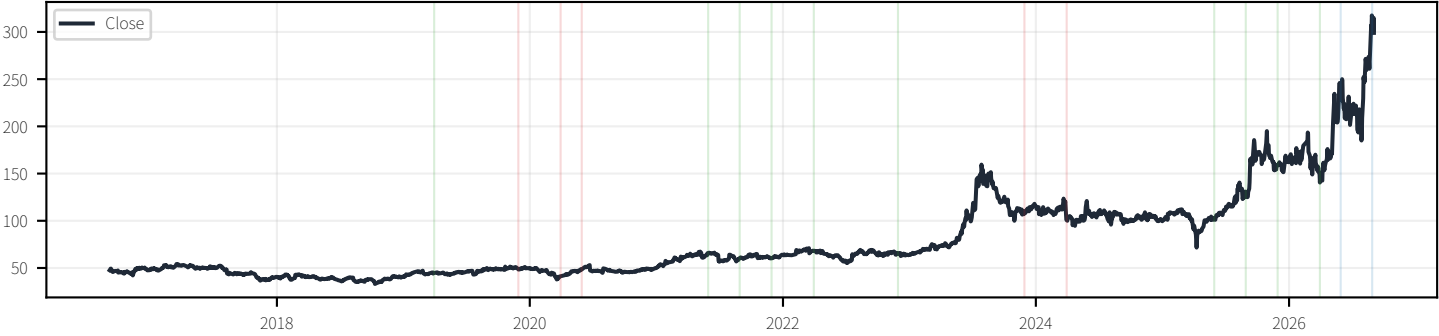

8. P/B / dividend yield

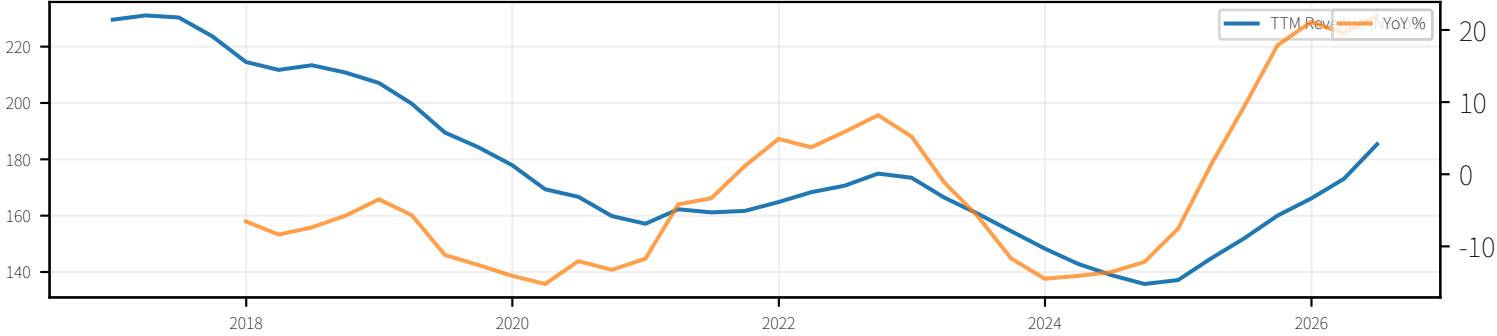

Quality: ROE, ROIC and operating margin meet the durable-profitability gate; Revenue and EPS grew over three years without contradictory FCF evidence; Operating cash flow supports earnings and free cash flow is persistent; Balance-sheet resilience gate is met | State: Revenue and EPS growth have remained positive across eight observations | Valuation: P/E and available P/B context are in the highest historical quartile

2301 光寶科 | GOOD × STABLE (CONFIRMED_GROWTH) × HIGH

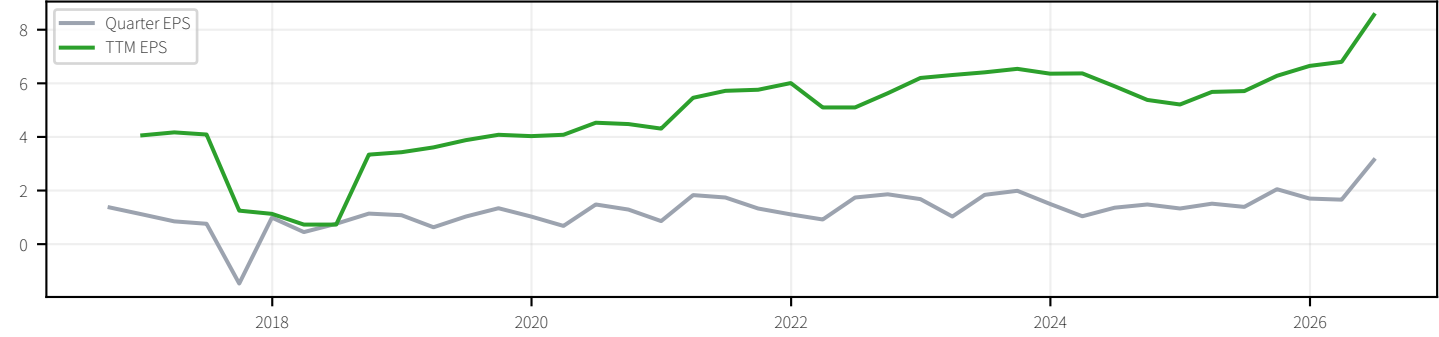

1. Price + fundamental-state transitions

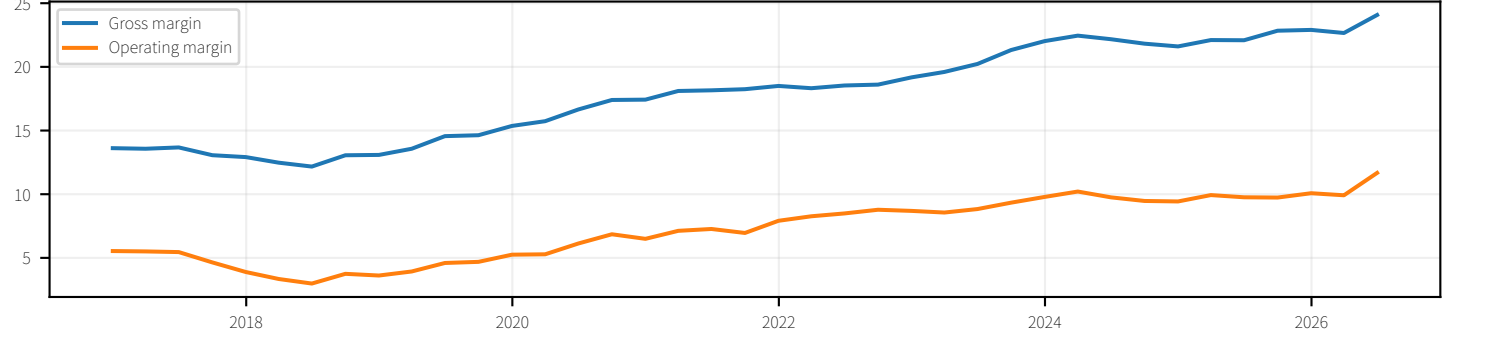

2. Revenue / revenue growth

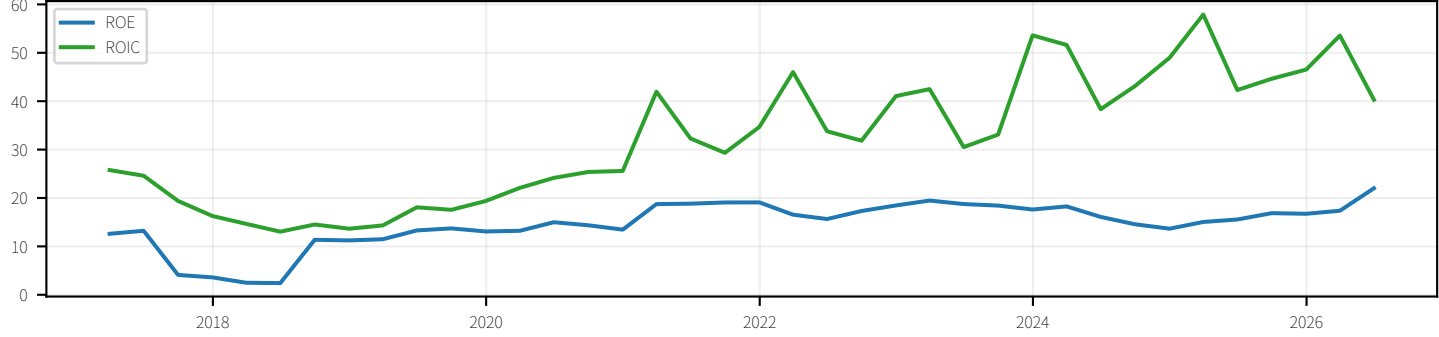

3. EPS / TTM EPS

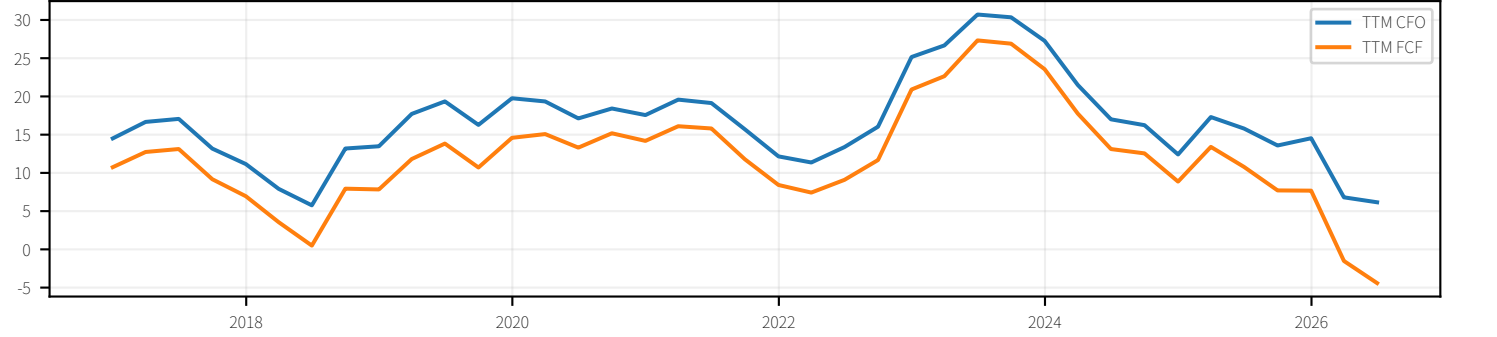

4. Margins (%)

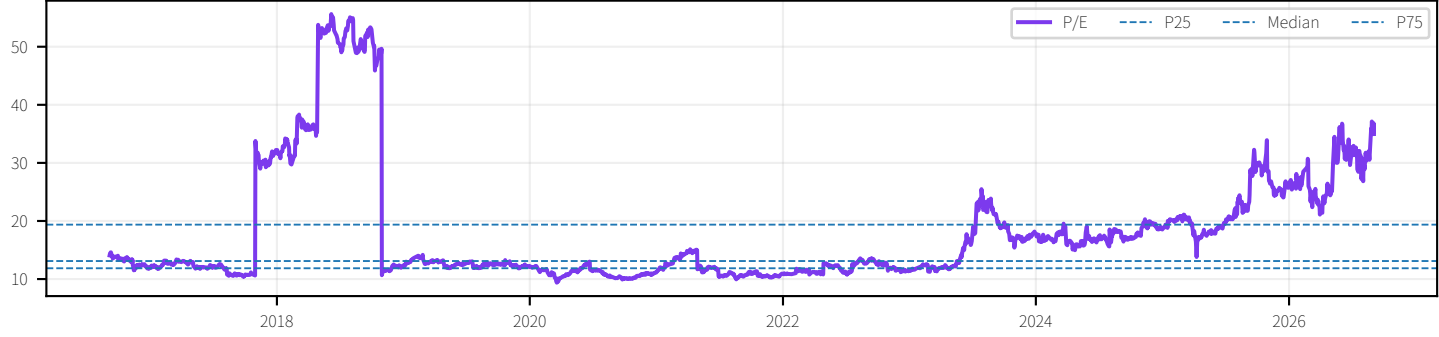

5. ROE / ROIC (%)

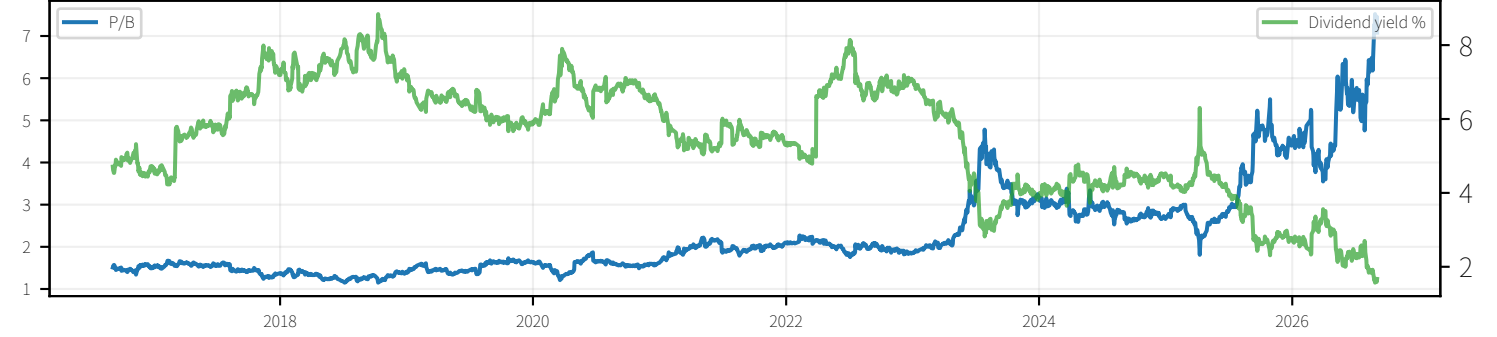

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

8. P/B / dividend yield

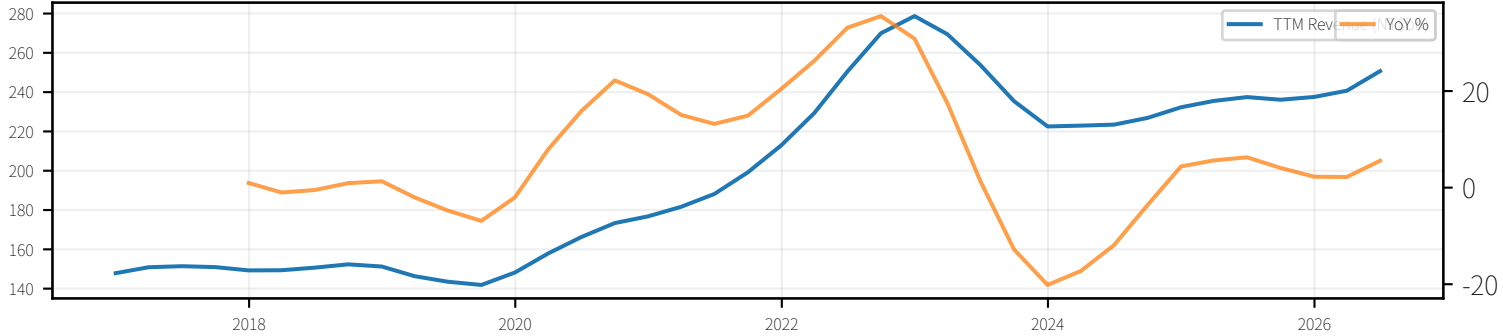

Quality: ROE, ROIC and operating margin meet the durable-profitability gate; Revenue and EPS grew over three years without contradictory FCF evidence; Operating cash flow supports earnings and free cash flow is persistent; Balance-sheet resilience gate is met | State: Revenue and EPS growth are positive across three observations | Valuation: P/E and available P/B context are in the highest historical quartile

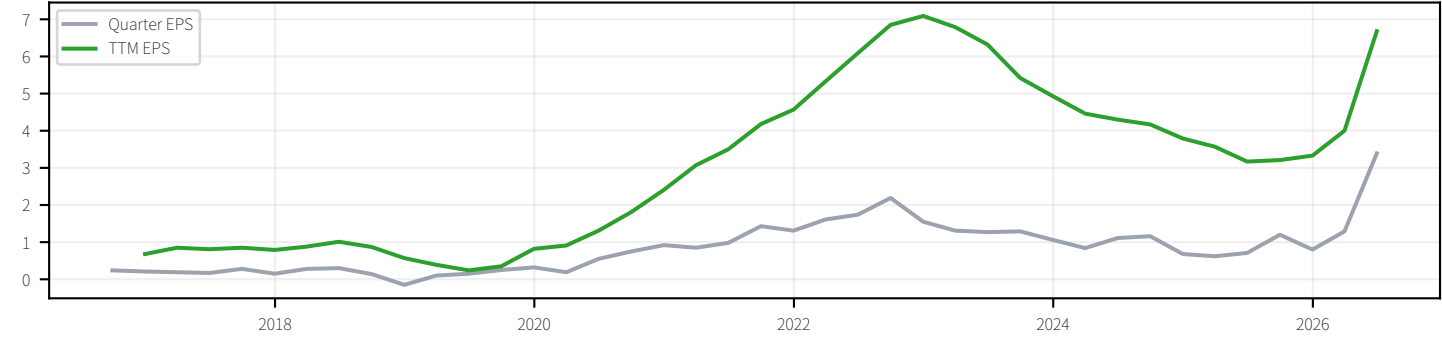

1. Price + fundamental-state transitions

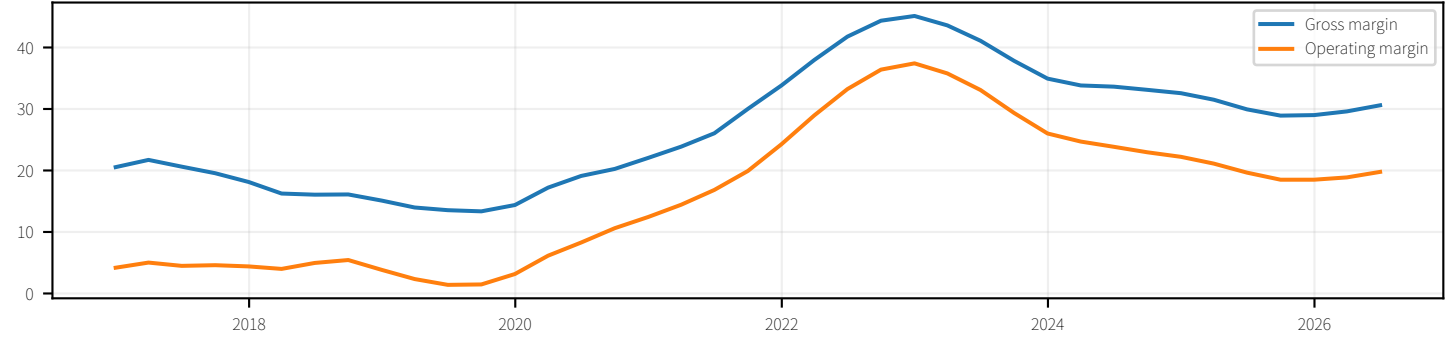

2. Revenue / revenue growth

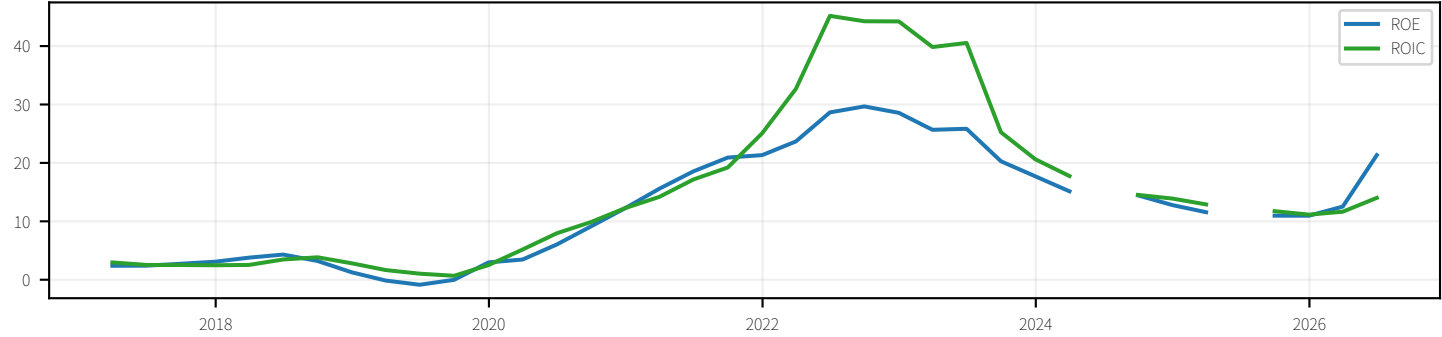

3. EPS / TTM EPS

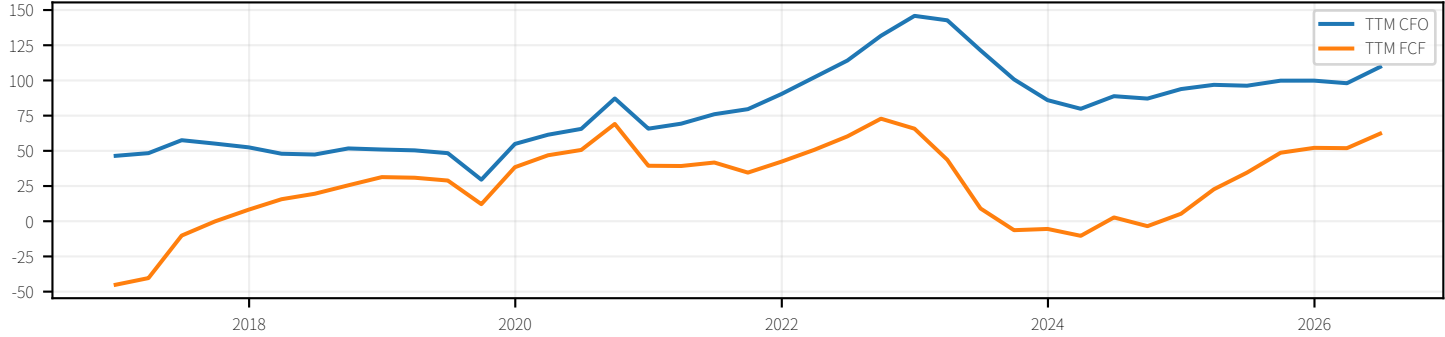

4. Margins (%)

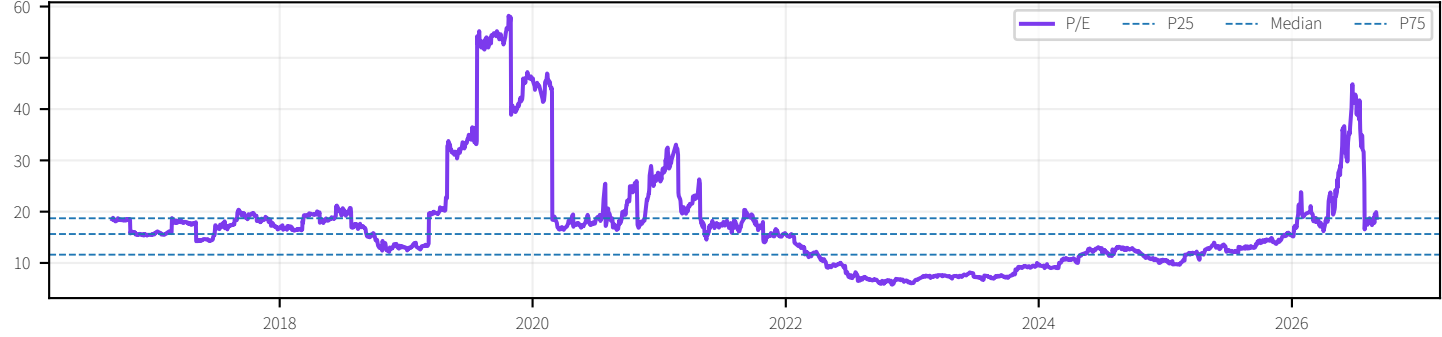

5. ROE / ROIC (%)

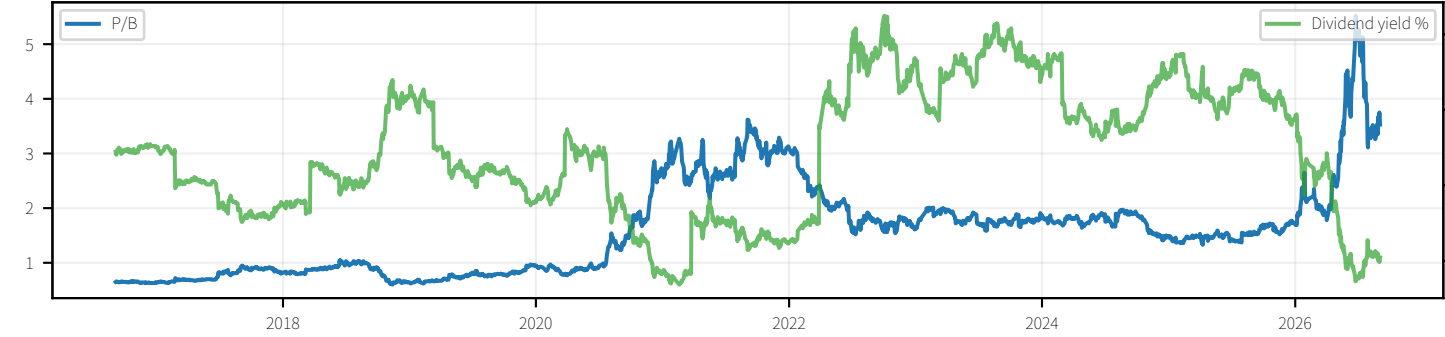

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

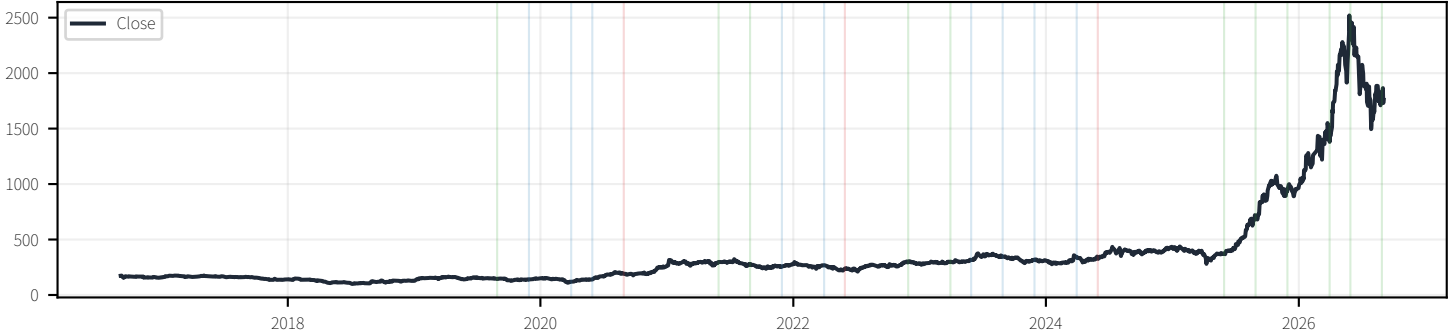

8. P/B / dividend yield

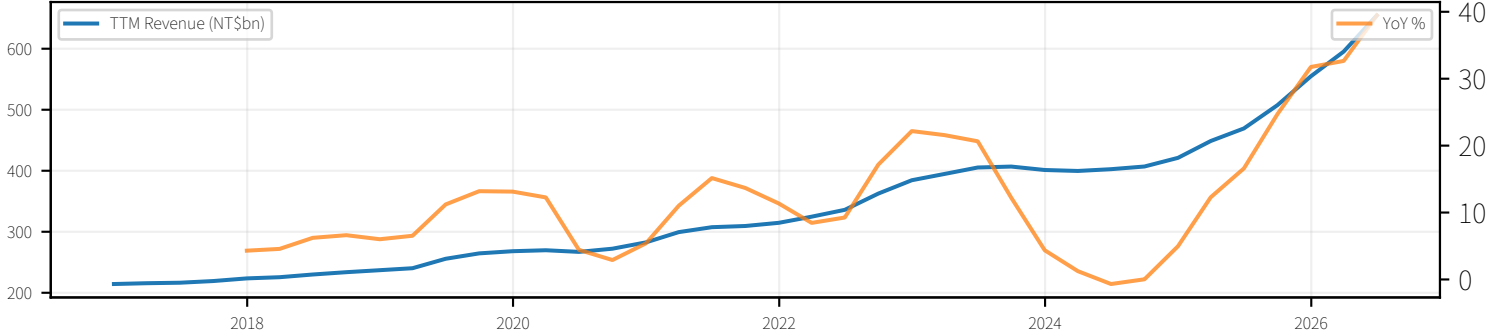

Quality: ROE, ROIC and operating margin meet the durable-profitability gate; Operating cash flow supports earnings and free cash flow is persistent; Balance-sheet resilience gate is met | State: Mixed fundamental directions do not satisfy a named state gate | Valuation: P/E and available P/B context are in the highest historical quartile

8. P/B / dividend yield

Quality: ROE, ROIC and operating margin meet the durable-profitability gate; Revenue and EPS grew over three years without contradictory FCF evidence | State: Revenue and EPS growth have remained positive across eight observations | Valuation: P/E and available P/B context are in the highest historical quartile

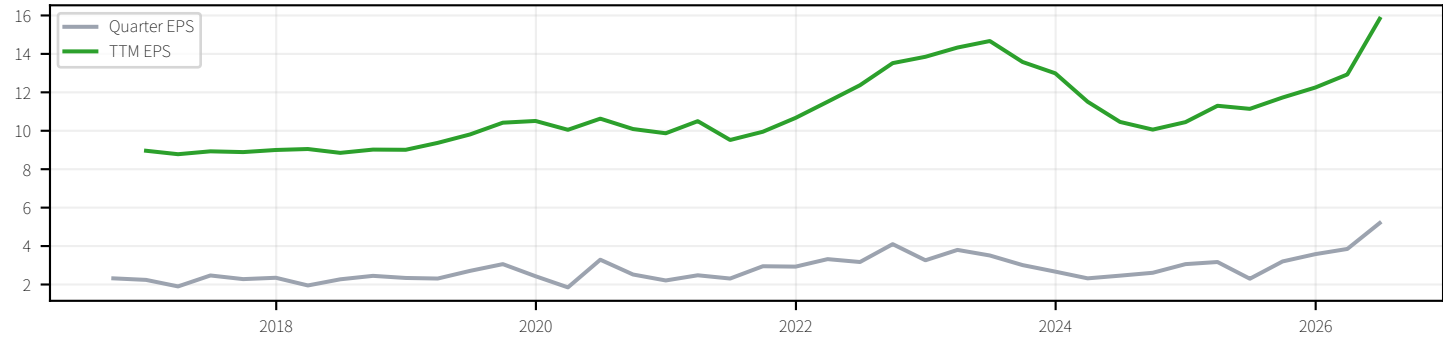

1. Price + fundamental-state transitions

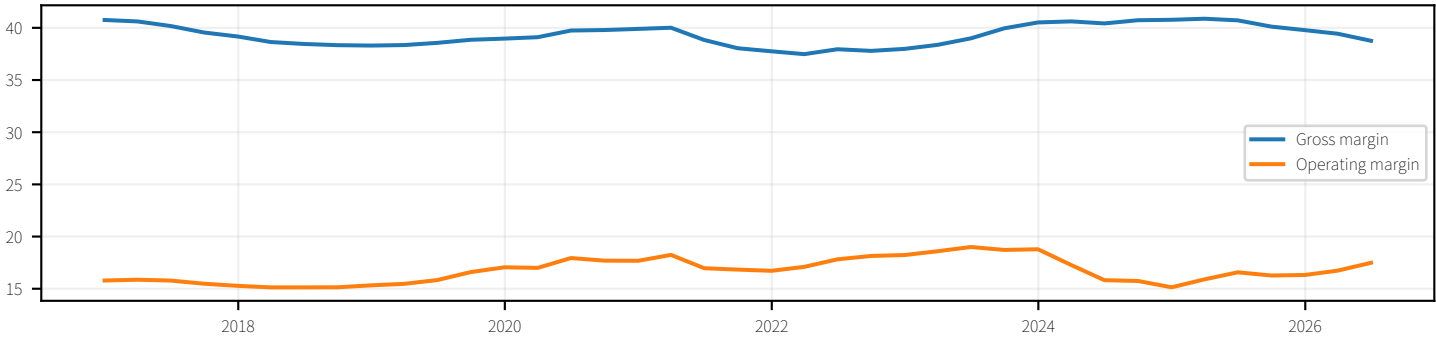

2. Revenue / revenue growth

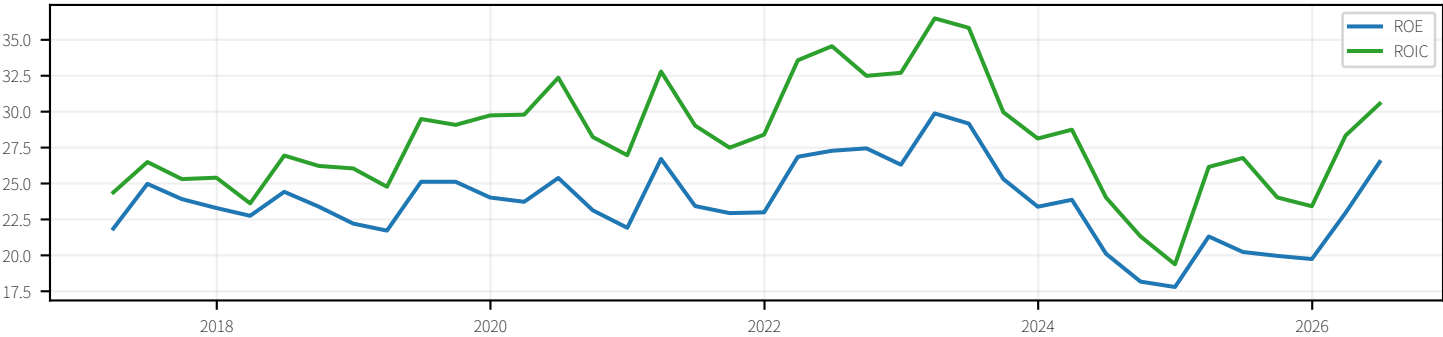

3. EPS / TTM EPS

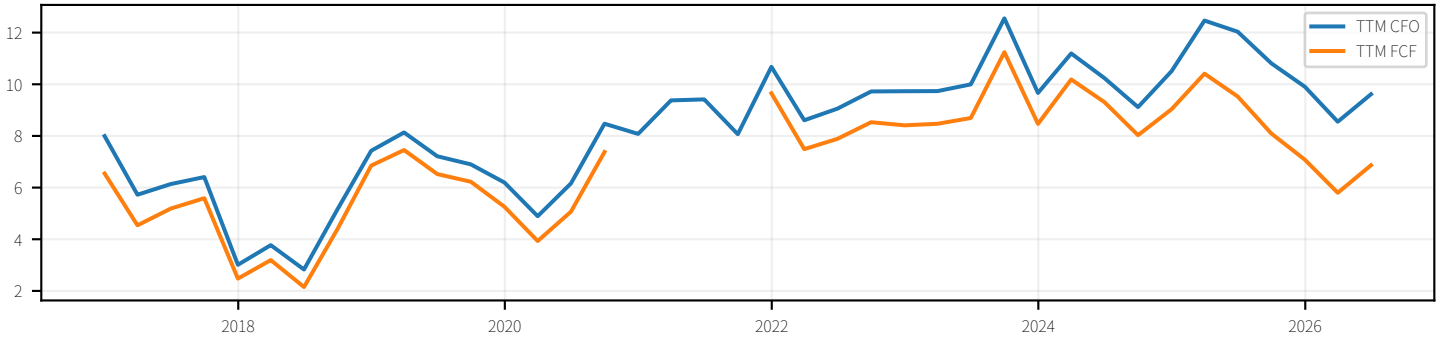

4. Margins (%)

5. ROE / ROIC (%)

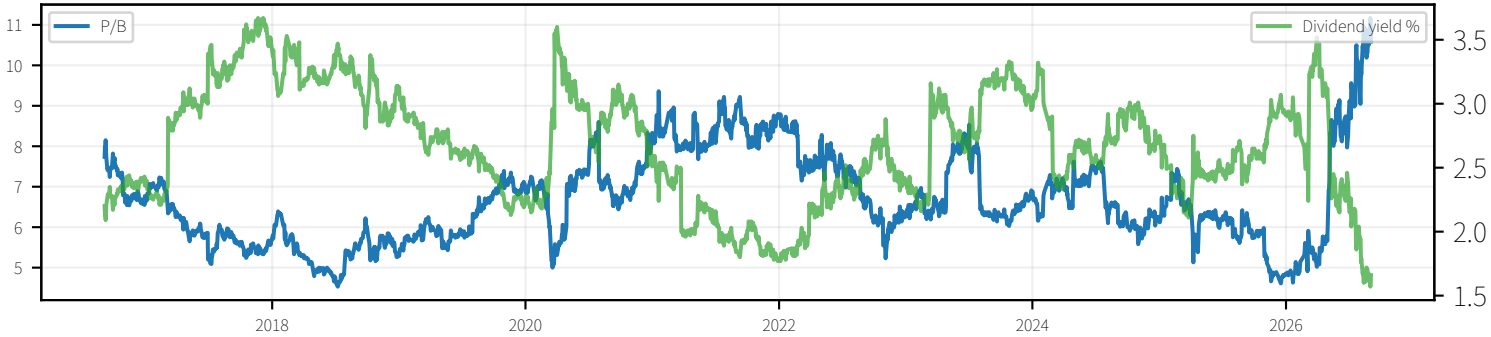

6. Operating cash flow / FCF (NT\$bn)

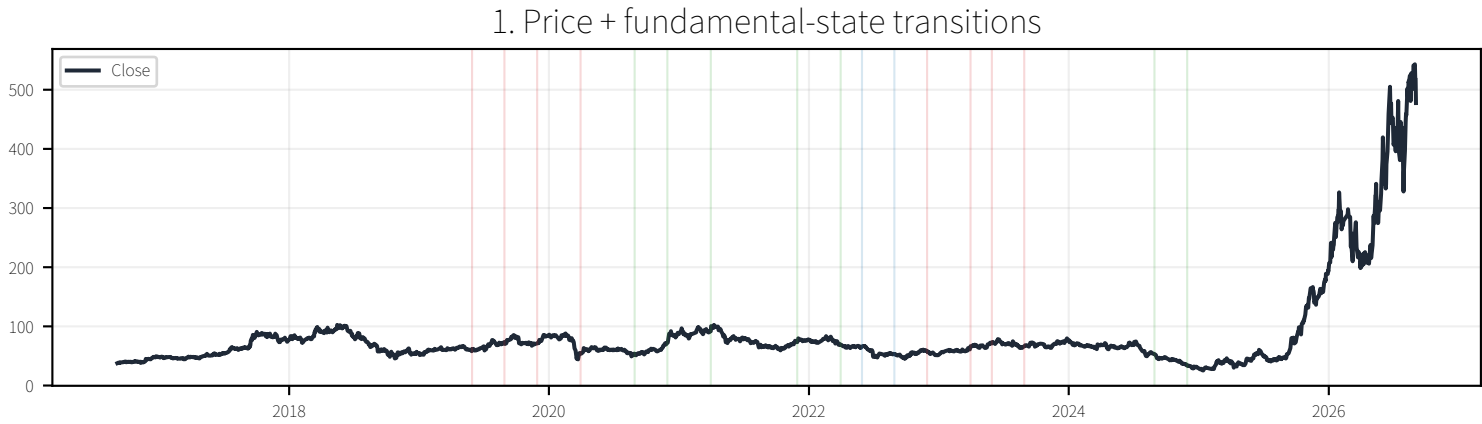

7. Historical P/E range

8. P/B / dividend yield

Quality: ROE, ROIC and operating margin meet the durable-profitability gate; Operating cash flow supports earnings and free cash flow is persistent; Balance-sheet resilience gate is met | State: Revenue and EPS growth are positive across three observations | Valuation: P/E and available P/B context are in the highest historical quartile

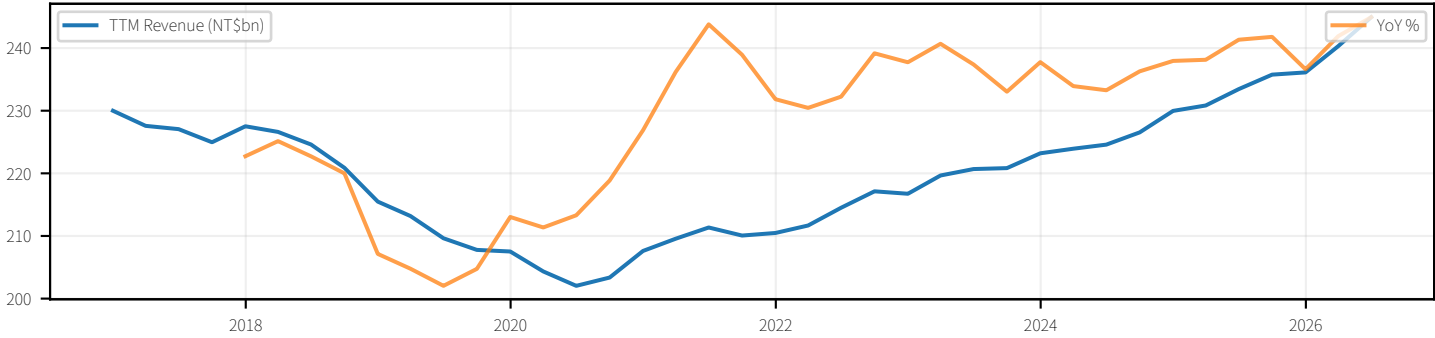

INSUFFICIENT METRIC COVERAGE
40 observed quarters do not meet the per-metric coverage contract.

Known observations remain in the CSV/JSON bundle.
Sparse series are intentionally not connected into potentially misleading charts.

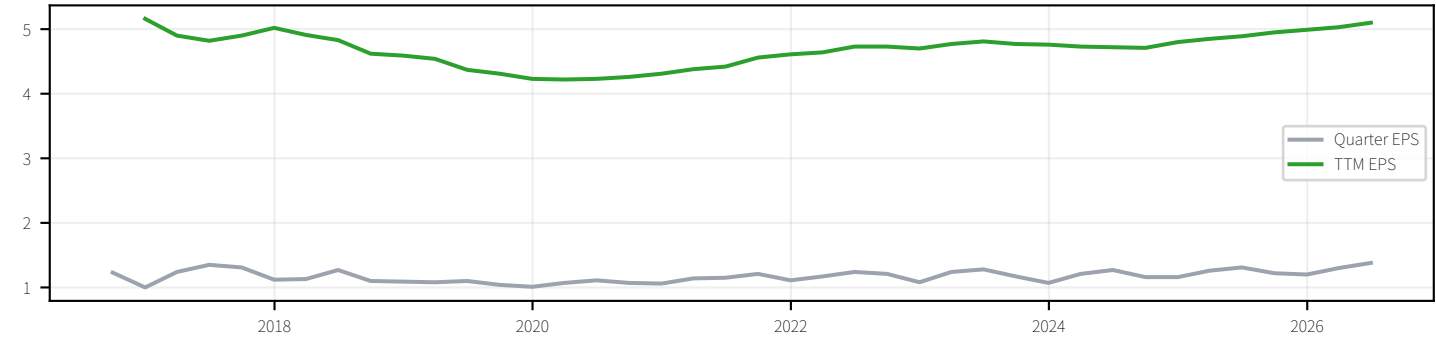

1. Price + fundamental-state transitions

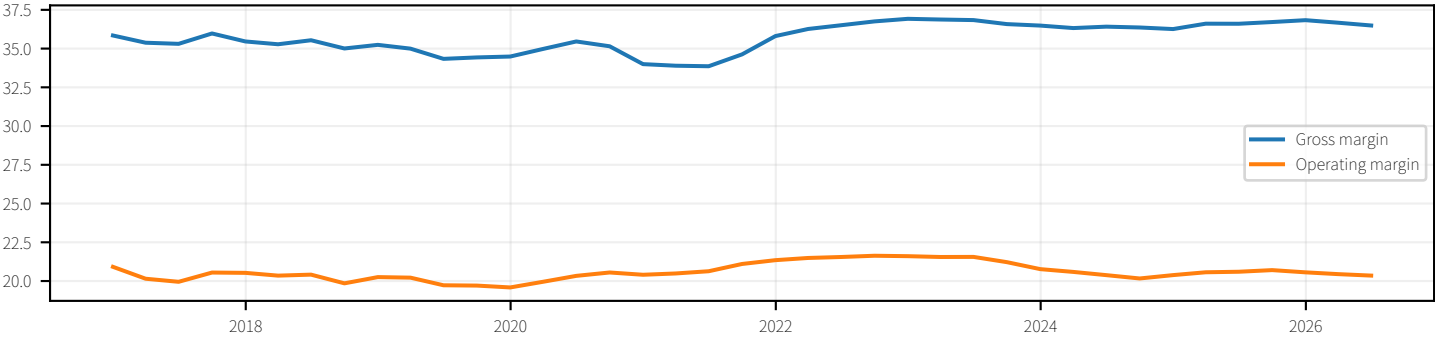

2. Revenue / revenue growth

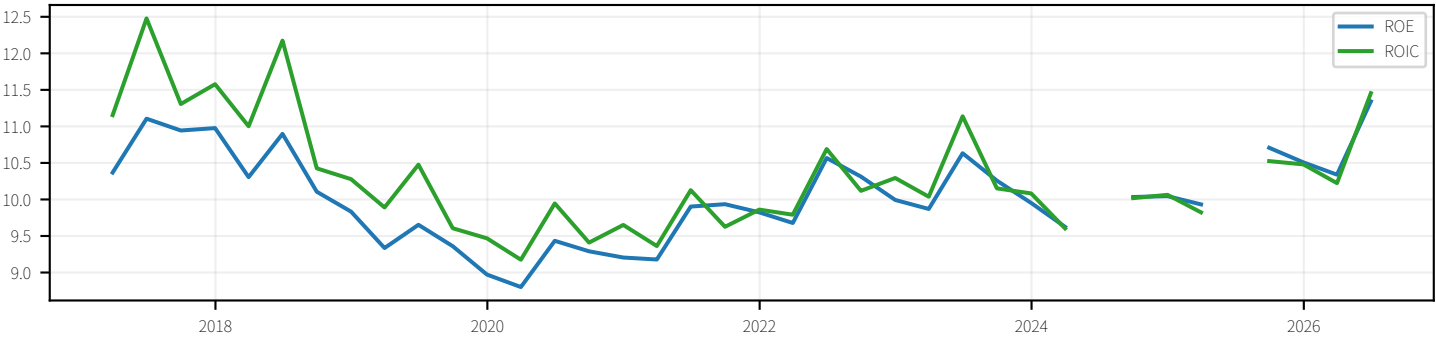

3. EPS / TTM EPS

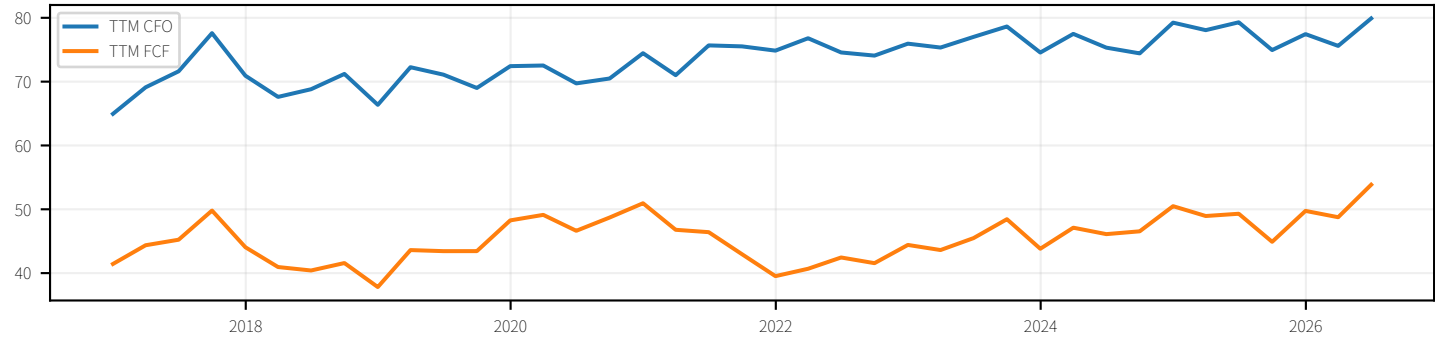

4. Margins (%)

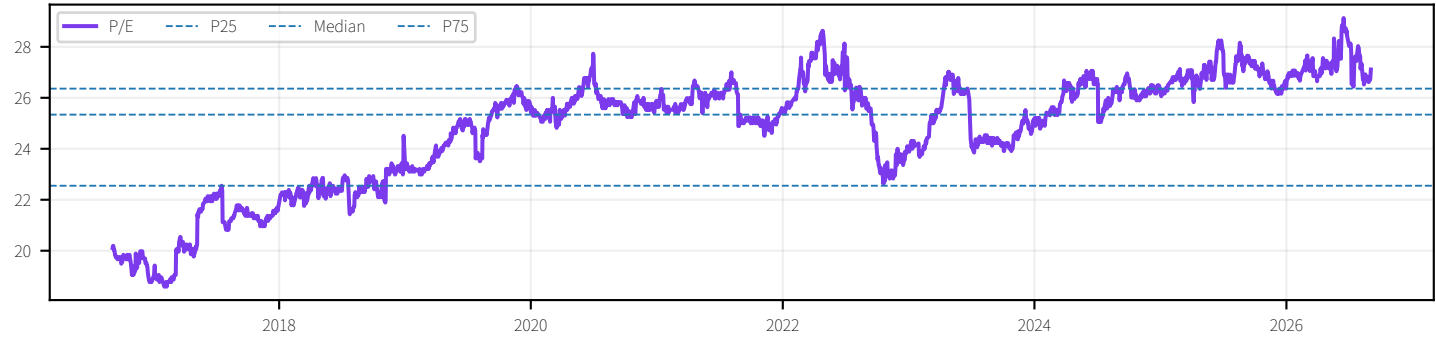

5. ROE / ROIC (%)

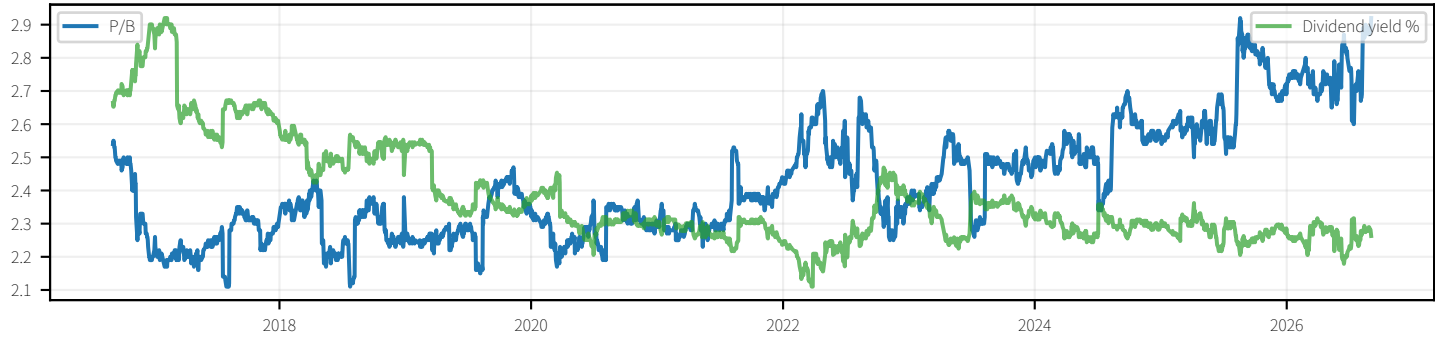

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

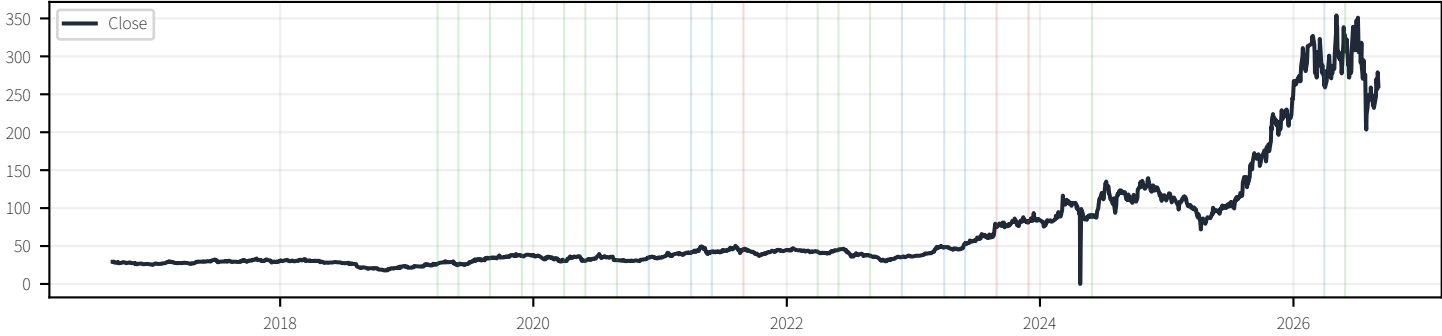

8. P/B / dividend yield

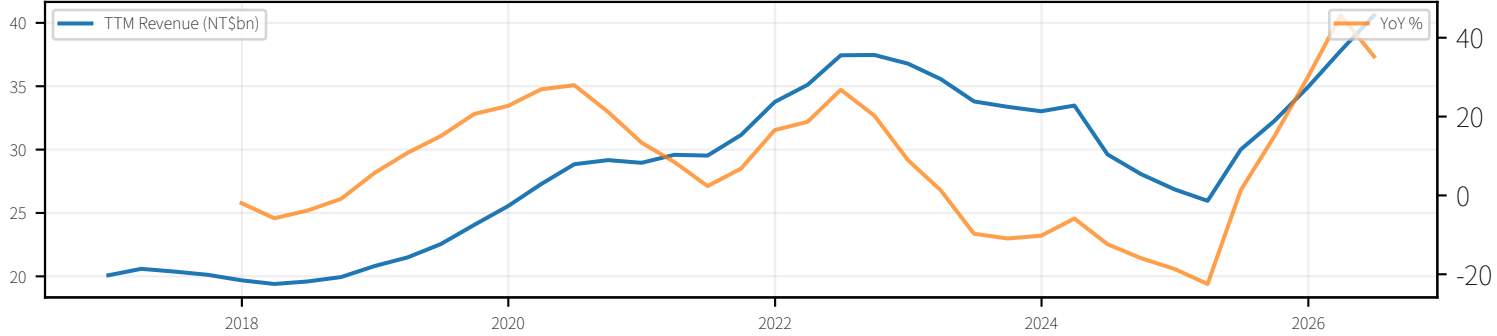

Quality: ROE, ROIC and operating margin meet the durable-profitability gate; Revenue and EPS grew over three years without contradictory FCF evidence; Operating cash flow supports earnings and free cash flow is persistent; Balance-sheet resilience gate is met | State: Revenue growth is in an early recovery and at least one independent fundamental family corroborates it | Valuation: P/E and available P/B context are in the highest historical quartile

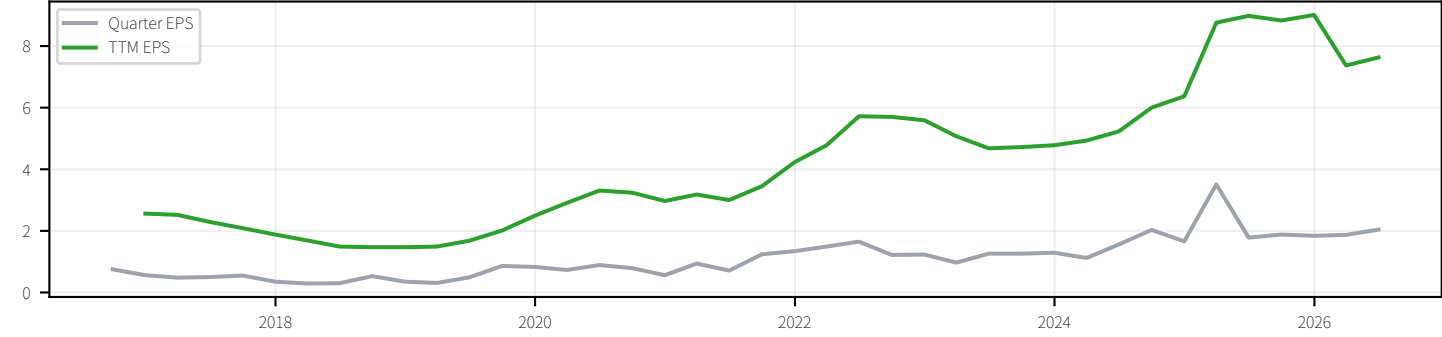

1. Price + fundamental-state transitions

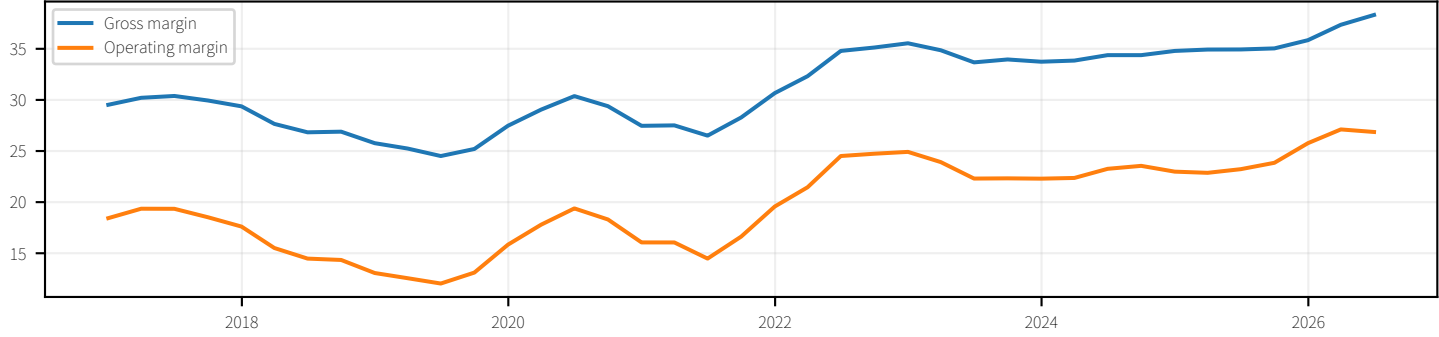

2. Revenue / revenue growth

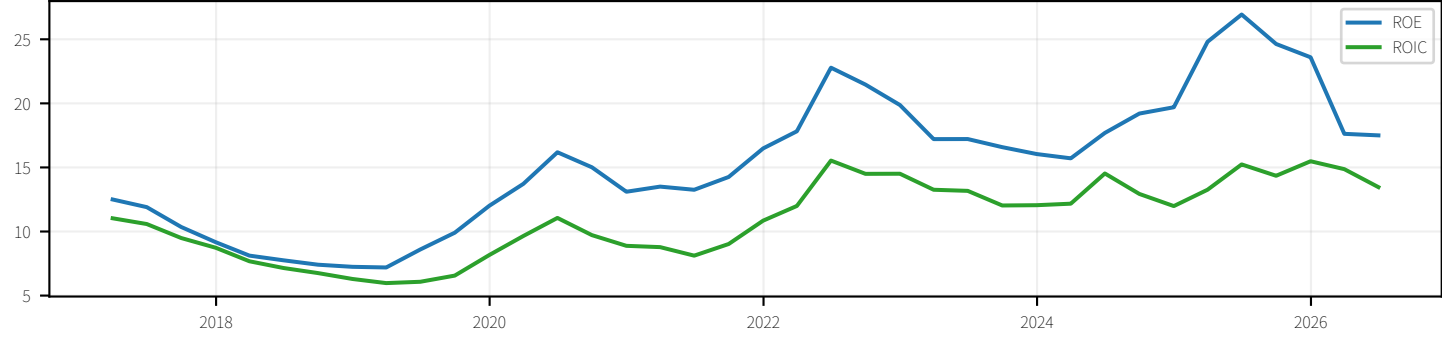

3. EPS / TTM EPS

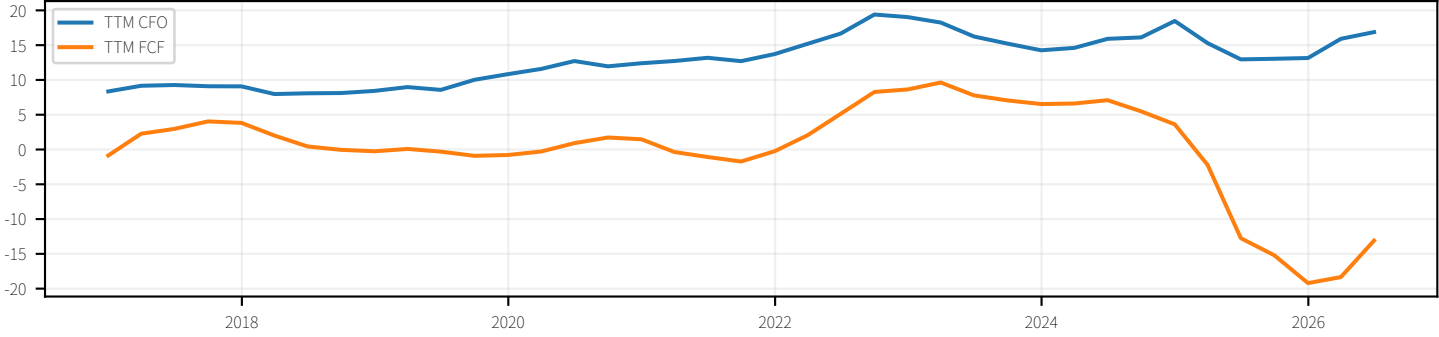

4. Margins (%)

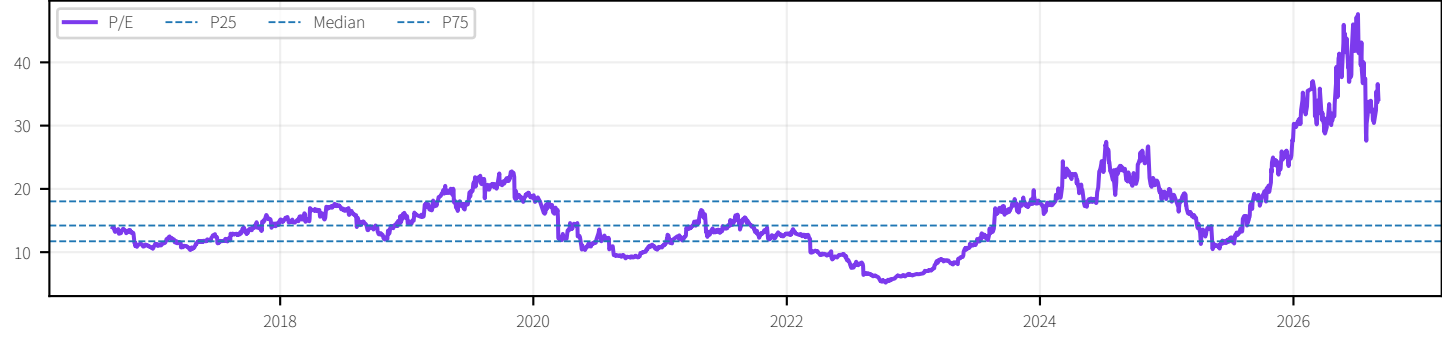

5. ROE / ROIC (%)

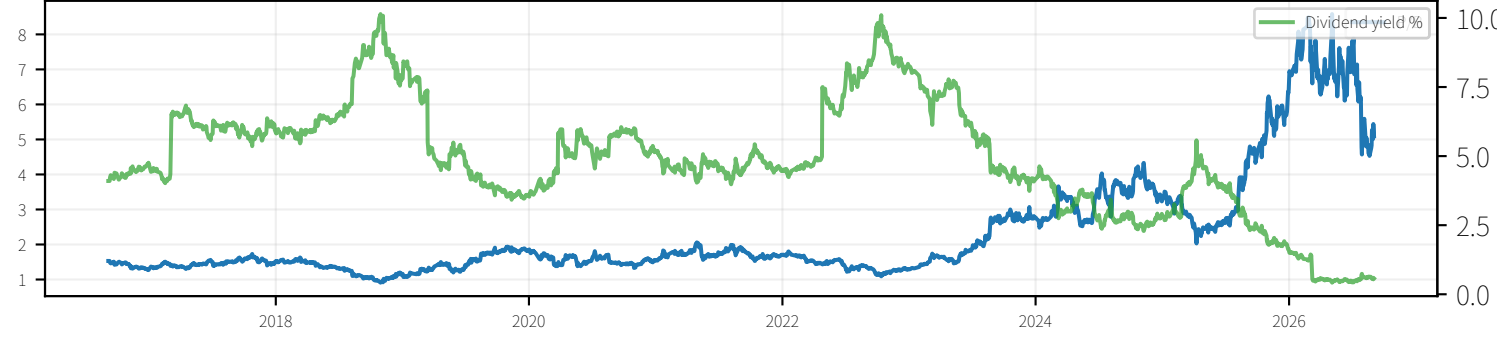

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

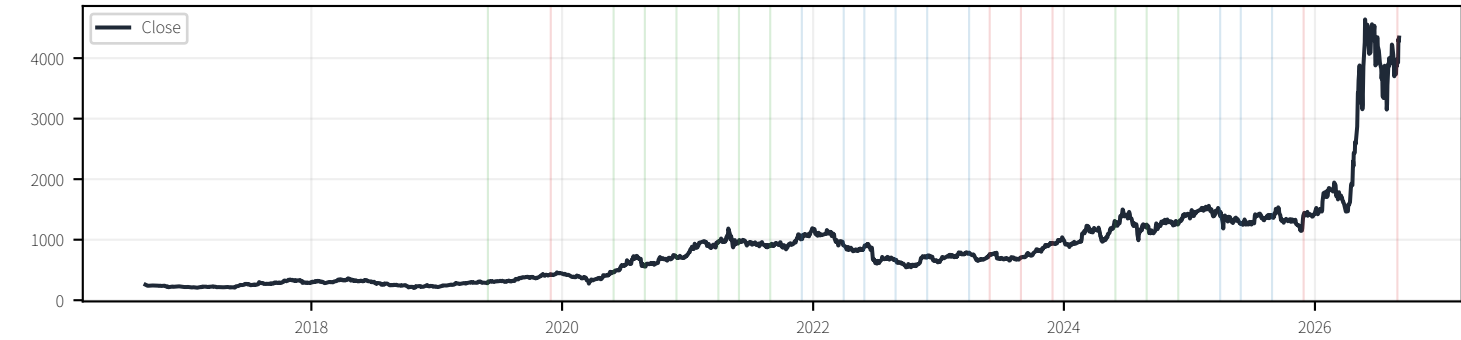

8. P/B / dividend yield

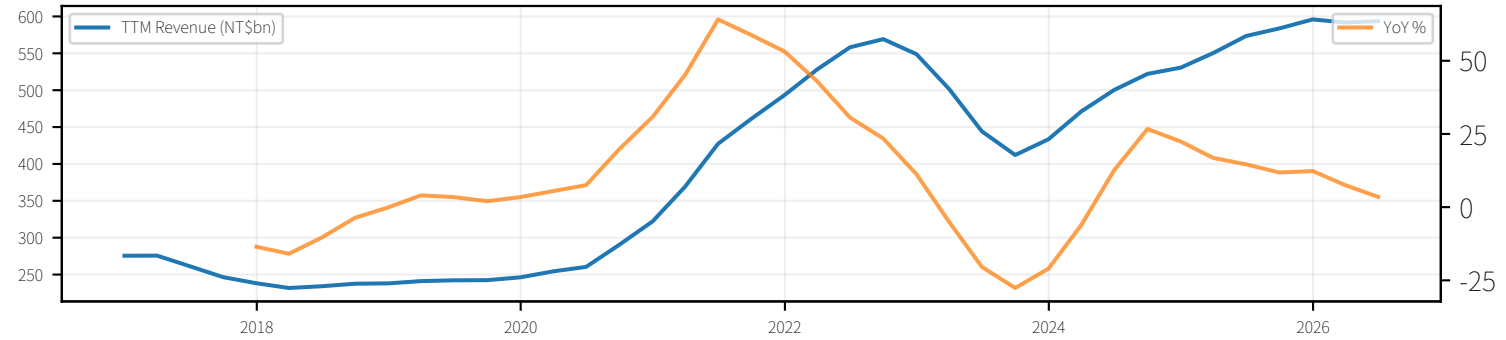

Quality: ROE, ROIC and operating margin meet the durable-profitability gate; Revenue and EPS grew over three years without contradictory FCF evidence | State: Mixed fundamental directions do not satisfy a named state gate | Valuation: P/E and available P/B context are in the highest historical quartile

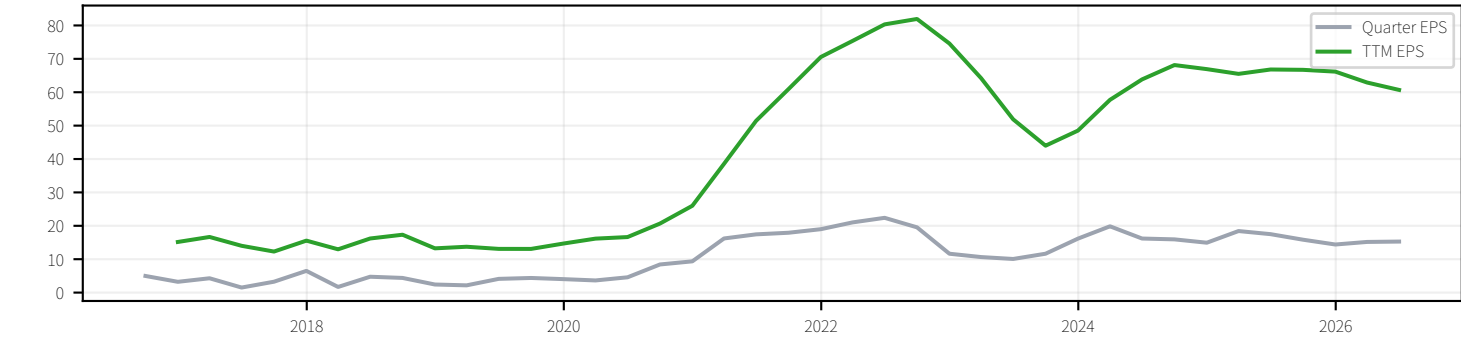

1. Price + fundamental-state transitions

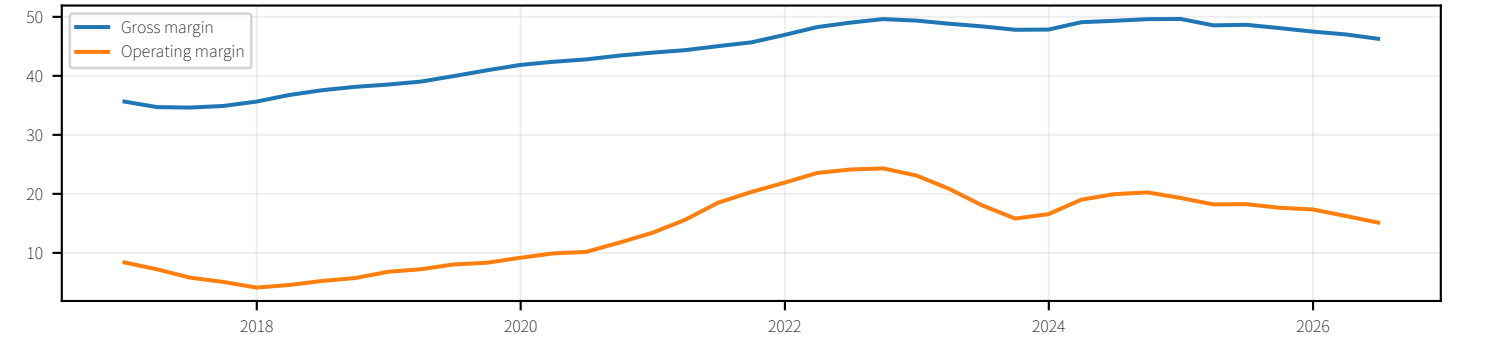

2. Revenue / revenue growth

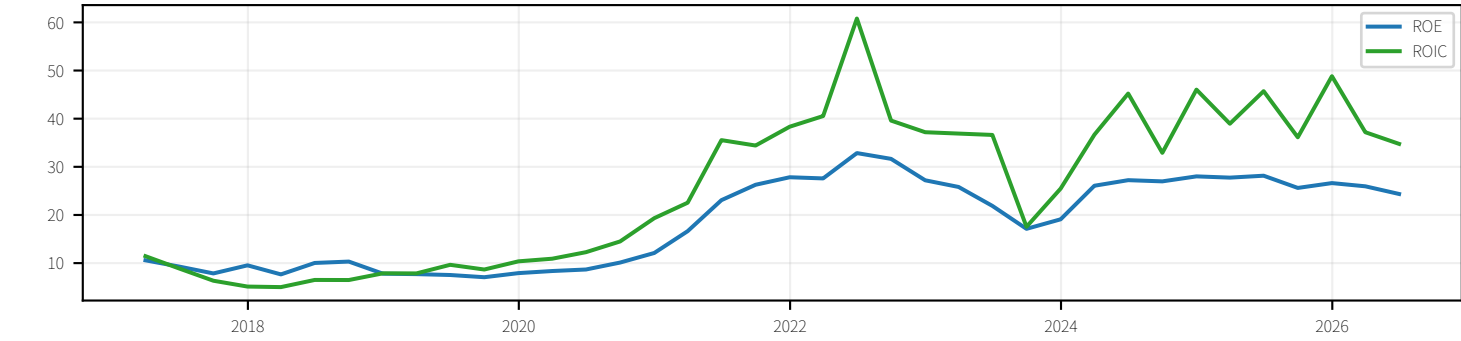

3. EPS / TTM EPS

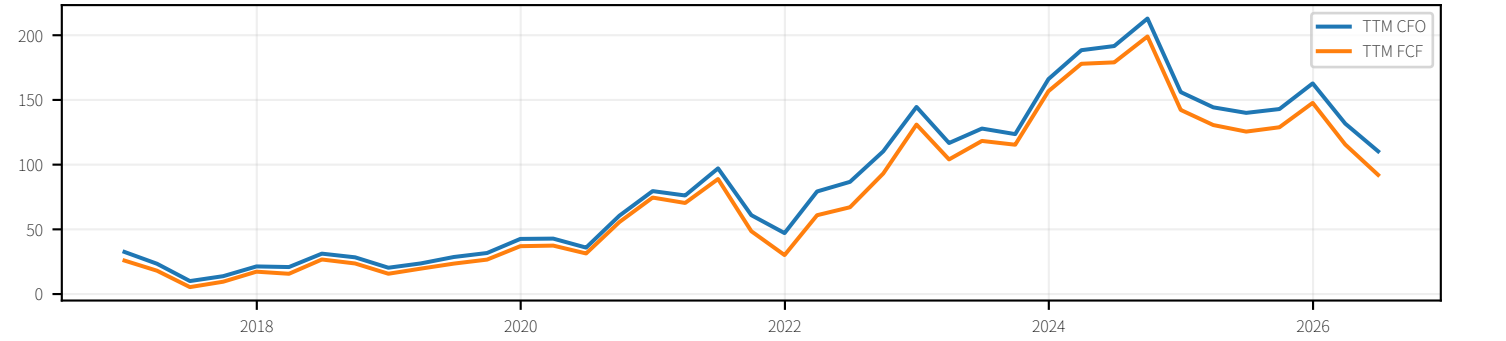

4. Margins (%)

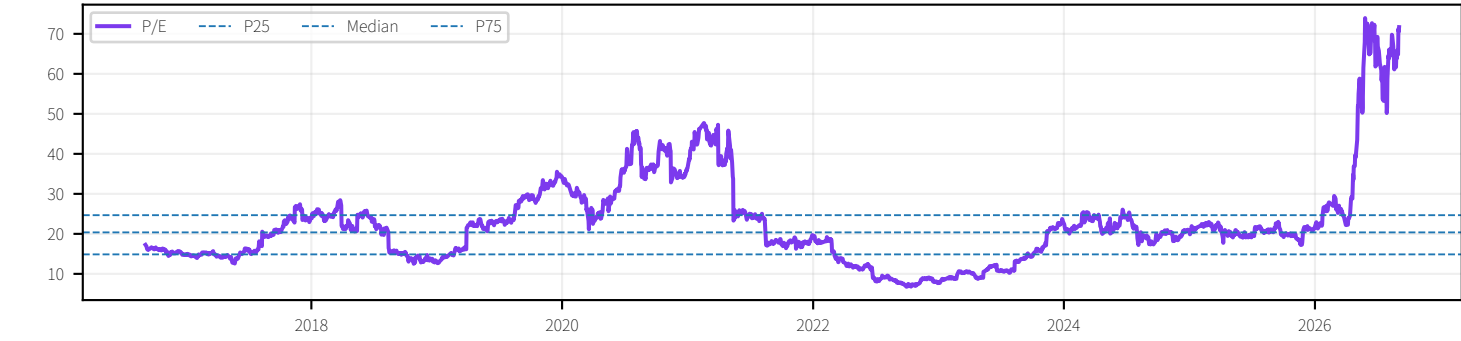

5. ROE / ROIC (%)

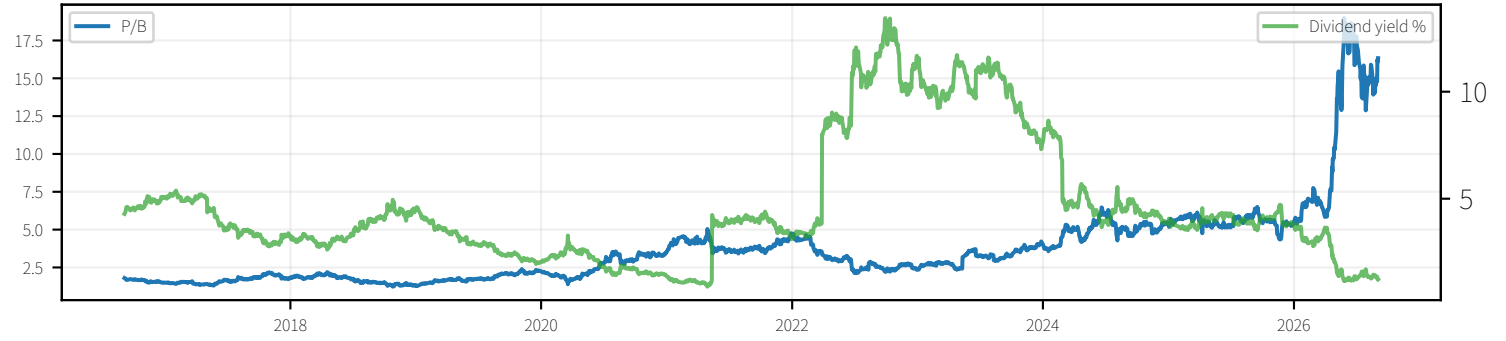

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

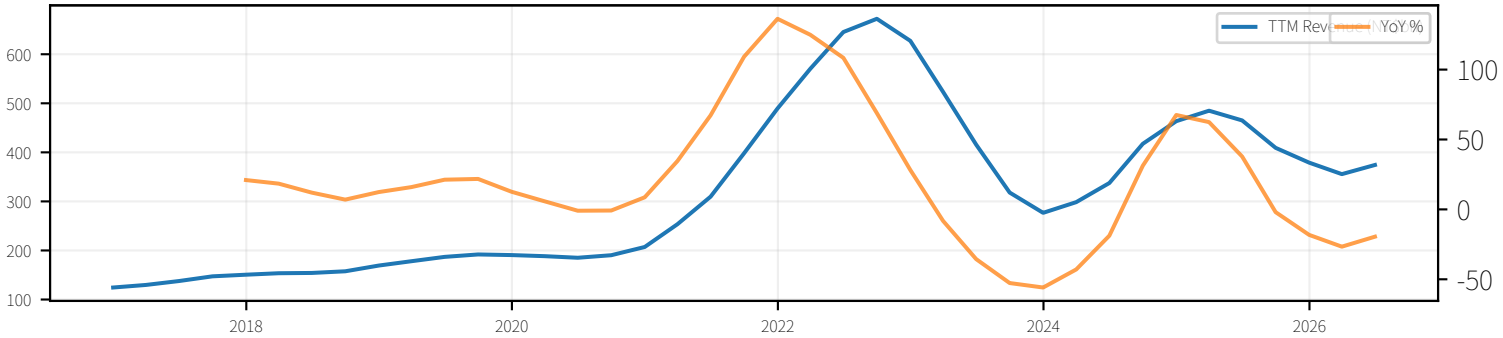

8. P/B / dividend yield

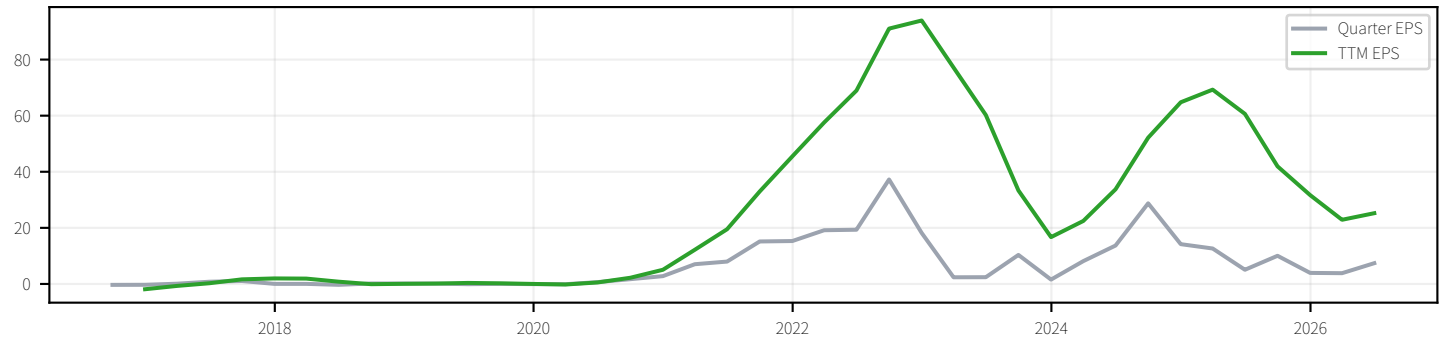

1. Price + fundamental-state transitions

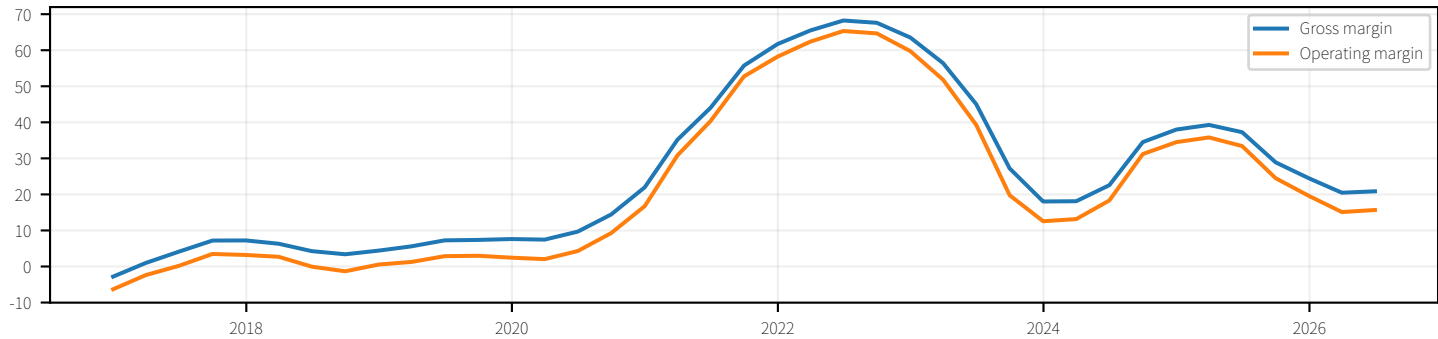

2. Revenue / revenue growth

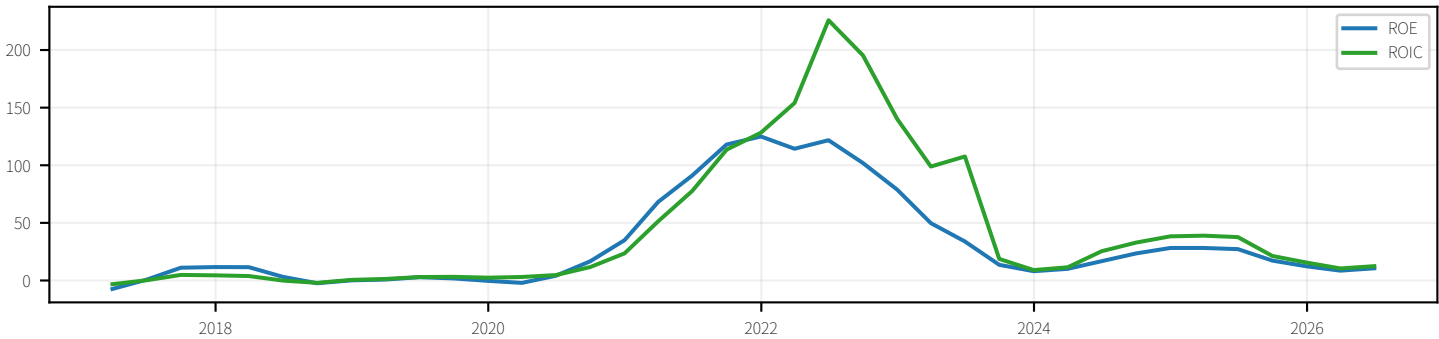

3. EPS / TTM EPS

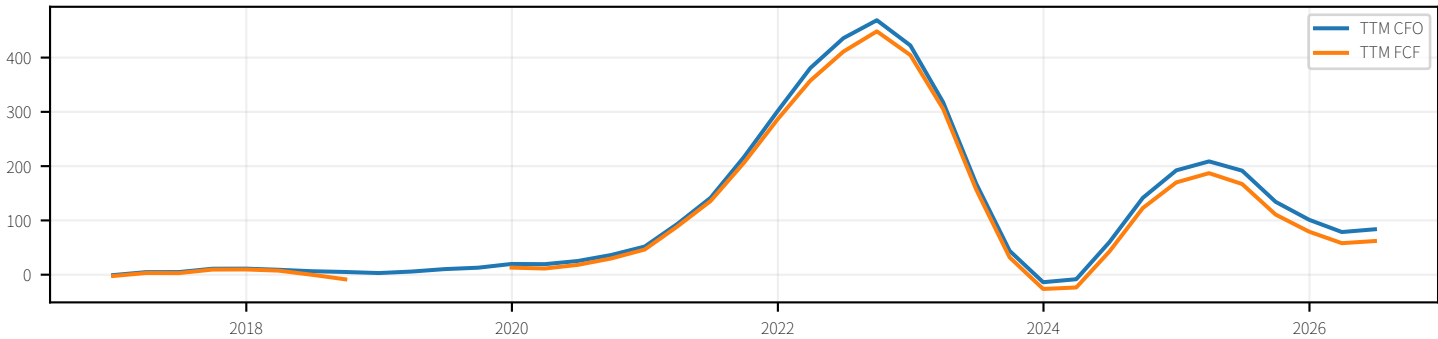

4. Margins (%)

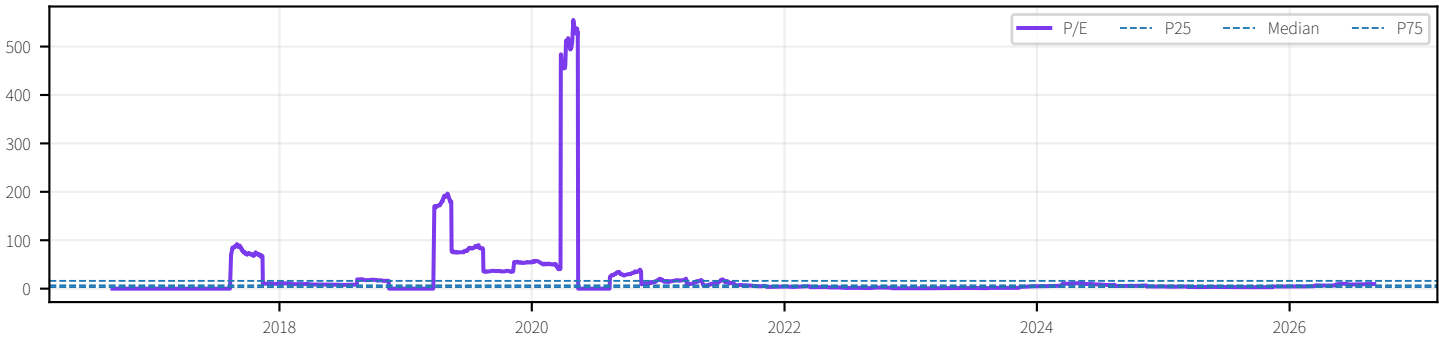

5. ROE / ROIC (%)

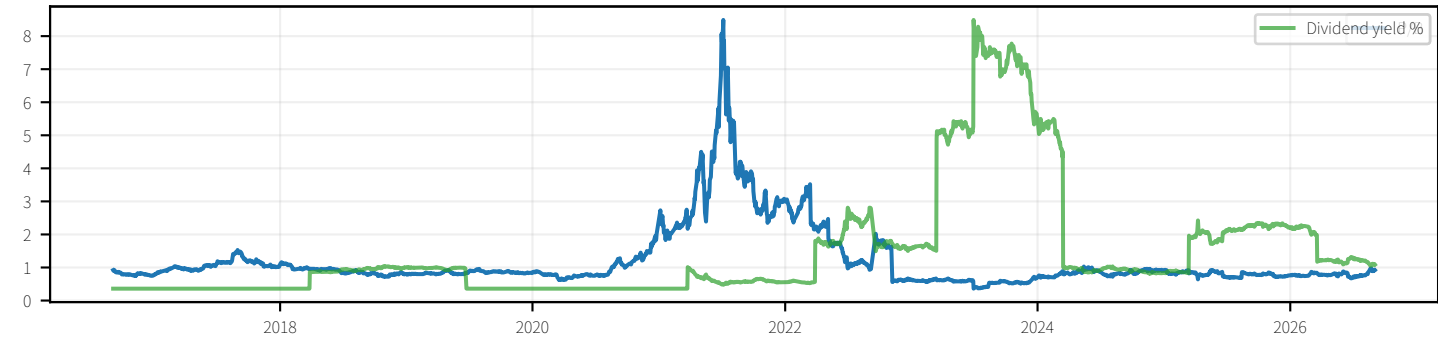

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

8. P/B / dividend yield

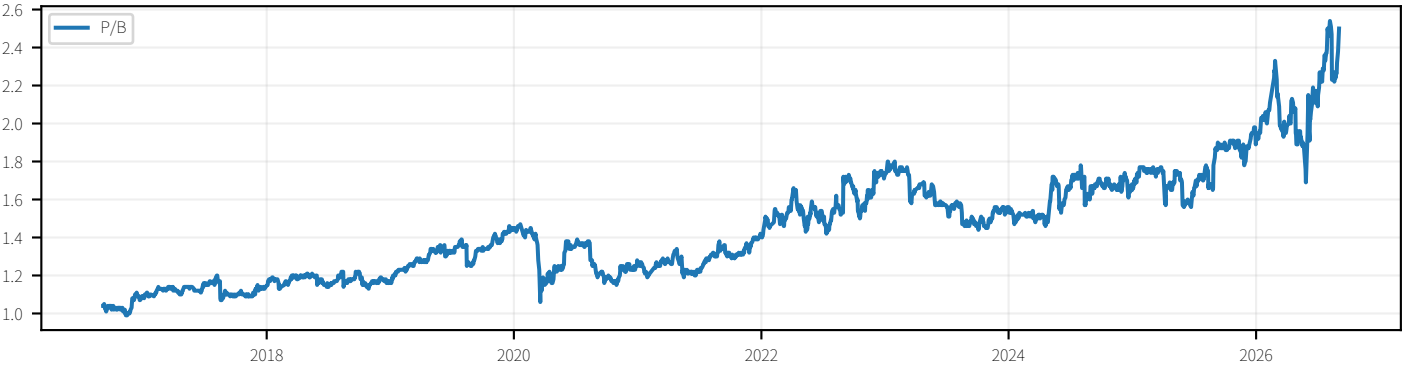

Quality: ROE, ROIC and operating margin meet the durable-profitability gate; Operating cash flow supports earnings and free cash flow is persistent; Balance-sheet resilience gate is met | State: Mixed fundamental directions do not satisfy a named state gate | Valuation: Normalized P/E is below the historical lower quartile

1. Price + fundamental-state transitions

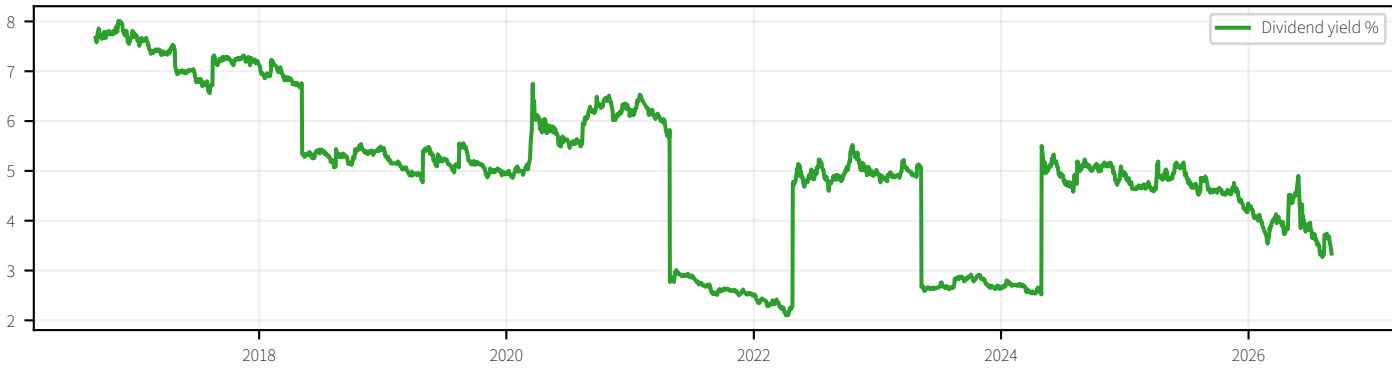

FINANCIAL STATE UNSUPPORTED — FAIL CLOSED
Subtype: BANK_HOLDING
Generic FCF, operating-margin, net-debt and ROIC gates are not applied.
Reliable PIT EPS/NI/equity/BVPS/ROE period mapping and bank/insurance fields are incomplete.

7. Financial-sector P/B (descriptive only)

8. Dividend yield (descriptive only)

1. Price + fundamental-state transitions

FINANCIAL STATE UNSUPPORTED — FAIL CLOSED
Subtype: INSURANCE_HEAVY

7. Financial-sector P/B (descriptive only)

8. Dividend yield (descriptive only)

Quality: Reliable PIT bank/insurance-specific core fields are unavailable in the v0.1 source contract | State: Financial realized/signal state is unsupported under the v0.1 PIT source contract | Valuation: P/B is in the highest historical quartile

1. Price + fundamental-state transitions

FINANCIAL STATE UNSUPPORTED — FAIL CLOSED
Subtype: BANK_HOLDING
Generic FCF, operating-margin, net-debt and ROIC gates are not applied.
Reliable PIT EPS/Ni/equity/BVPS/ROE period mapping and bank/insurance fields are incomplete.

7. Financial-sector P/B (descriptive only)

8. Dividend yield (descriptive only)

3008 大立光 | GOOD × UNKNOWN (UNKNOWN) × NORMAL

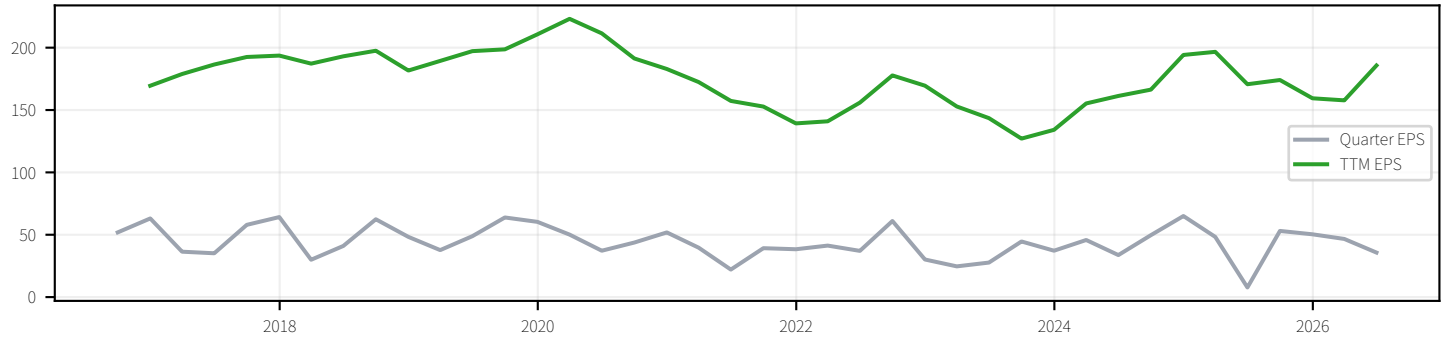

1. Price + fundamental-state transitions

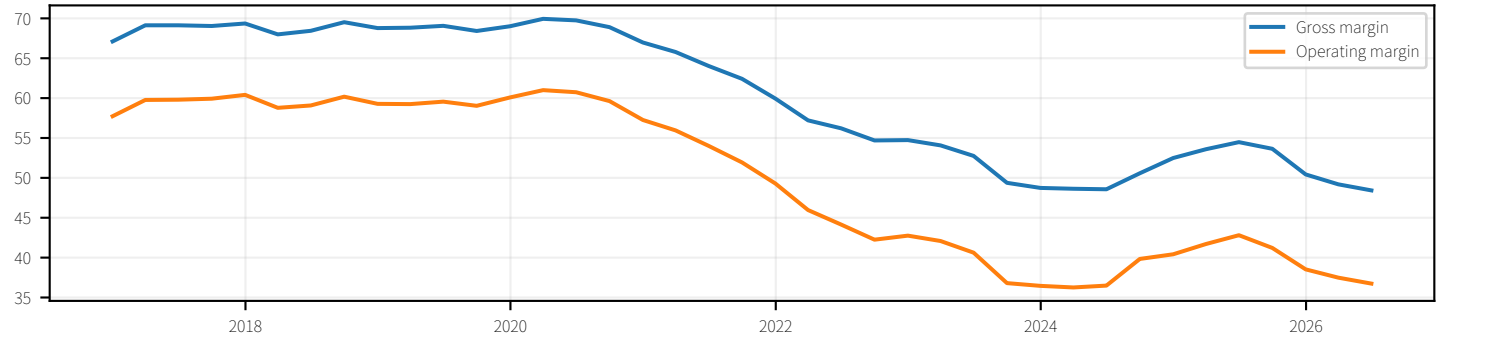

2. Revenue / revenue growth

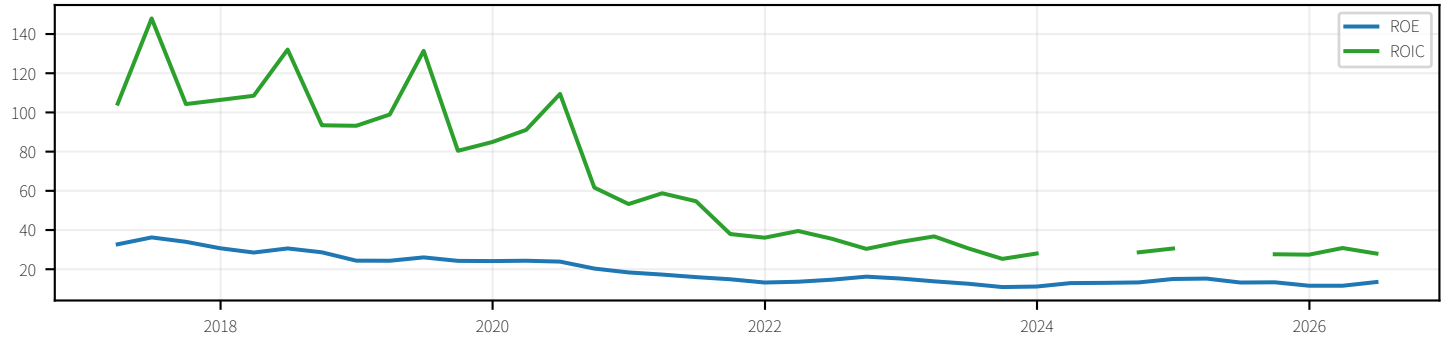

3. EPS / TTM EPS

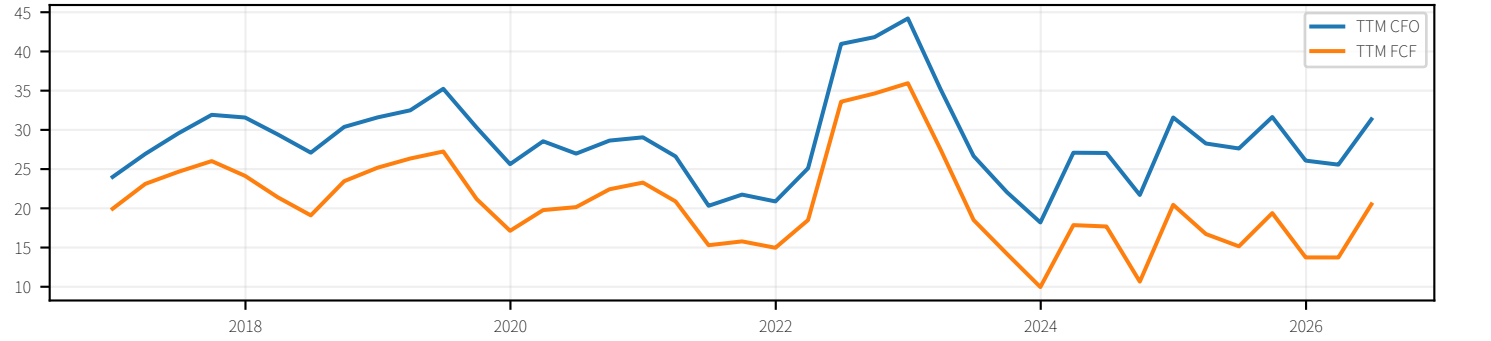

4. Margins (%)

5. ROE / ROIC (%)

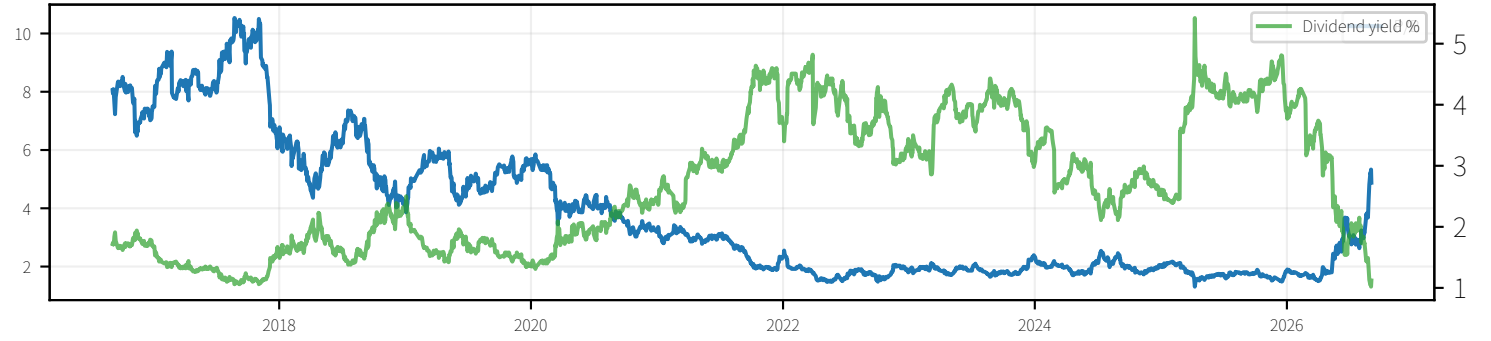

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

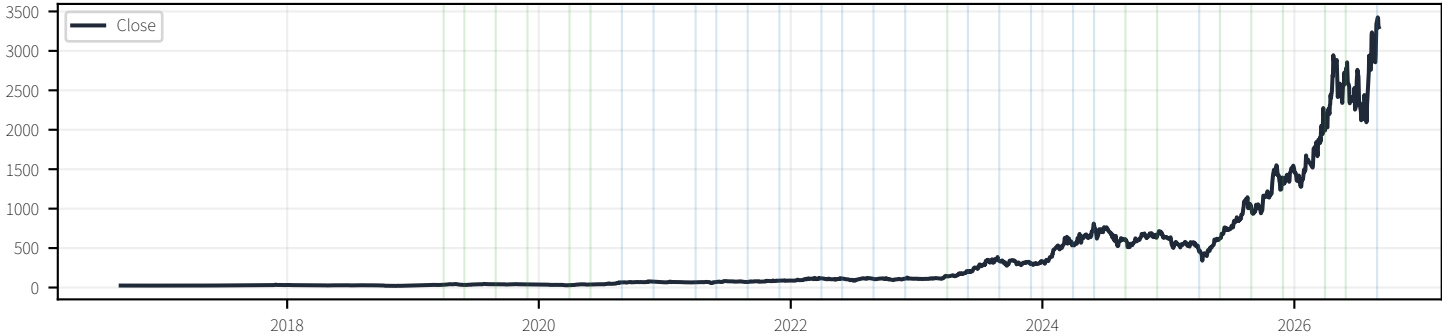

8. P/B / dividend yield

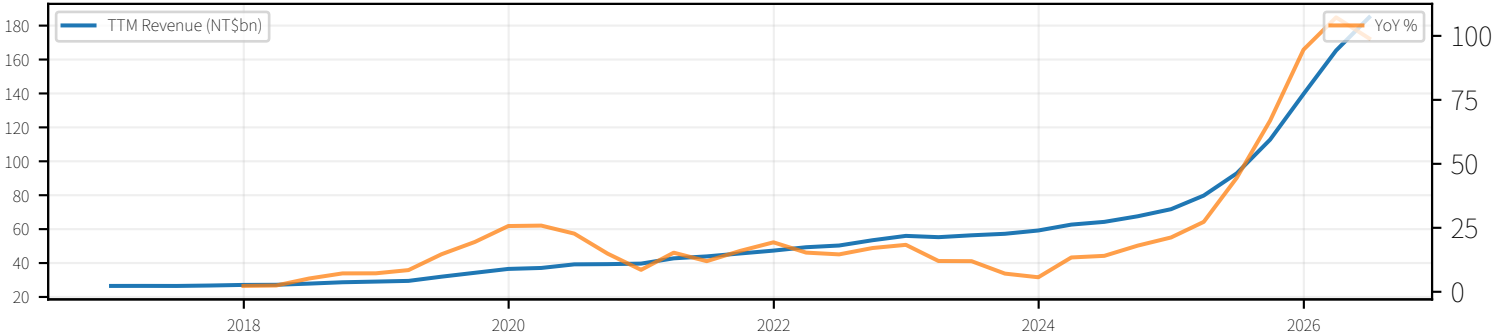

Quality: ROE, ROIC and operating margin meet the durable-profitability gate; Revenue and EPS grew over three years without contradictory FCF evidence; Operating cash flow supports earnings and free cash flow is persistent; Balance-sheet resilience gate is met | State: Mixed fundamental directions do not satisfy a named state gate | Valuation: Valuation is within the model's middle historical context

3017 奇鋹 | GOOD × STABLE (MATURE_GROWTH) × HIGH

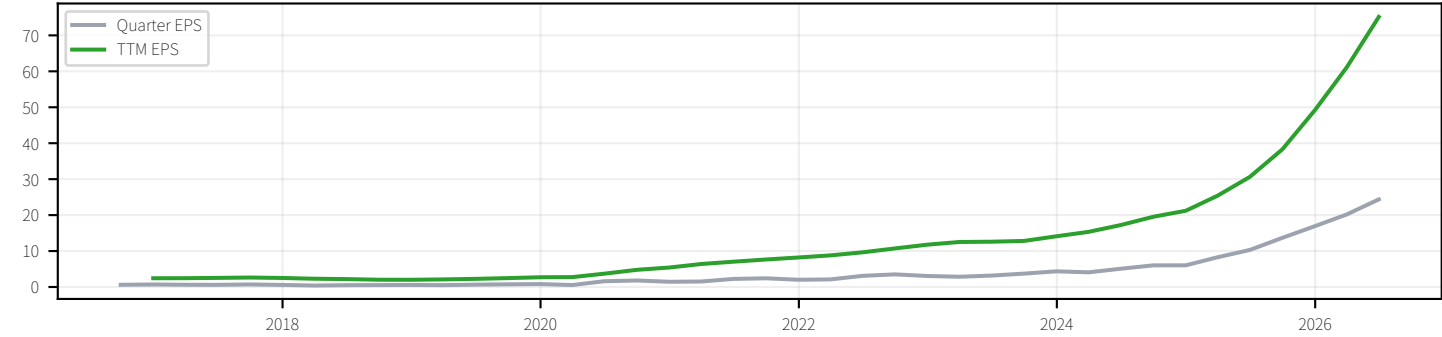

1. Price + fundamental-state transitions

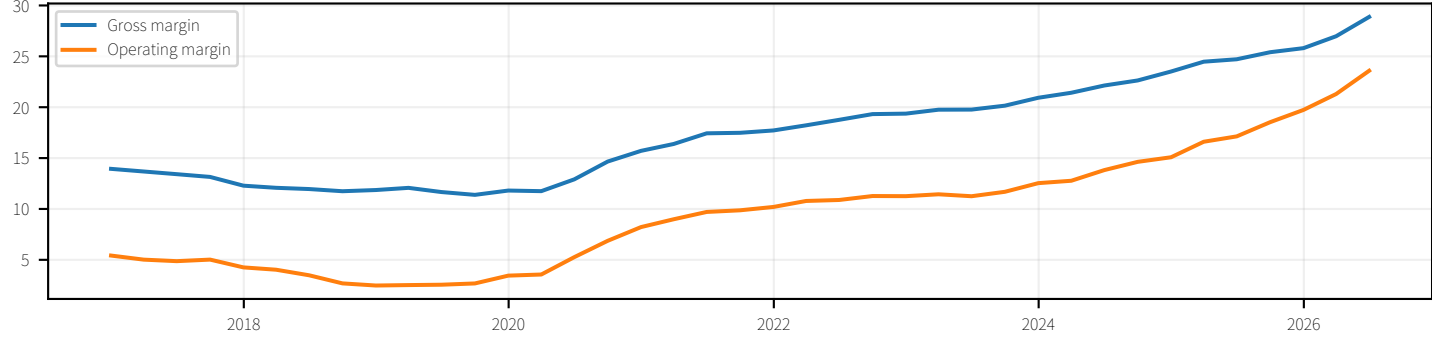

2. Revenue / revenue growth

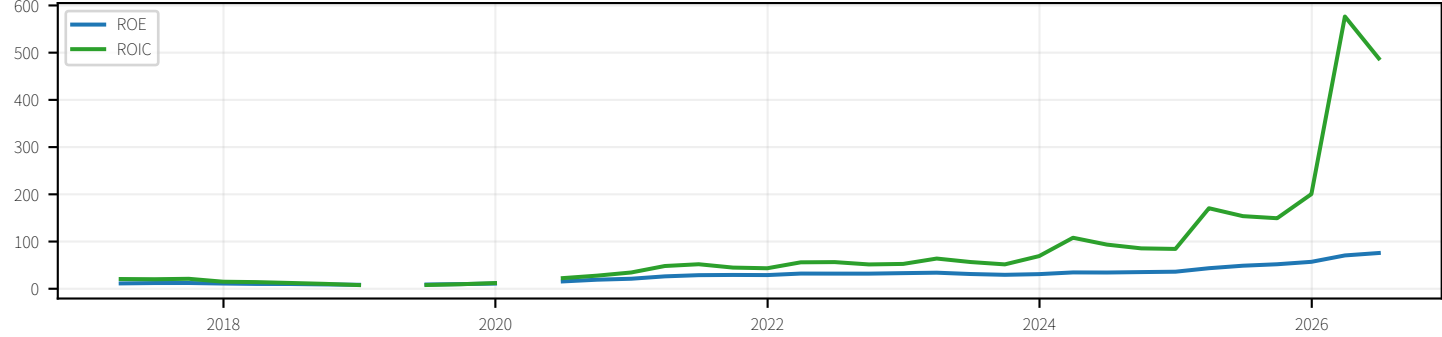

3. EPS / TTM EPS

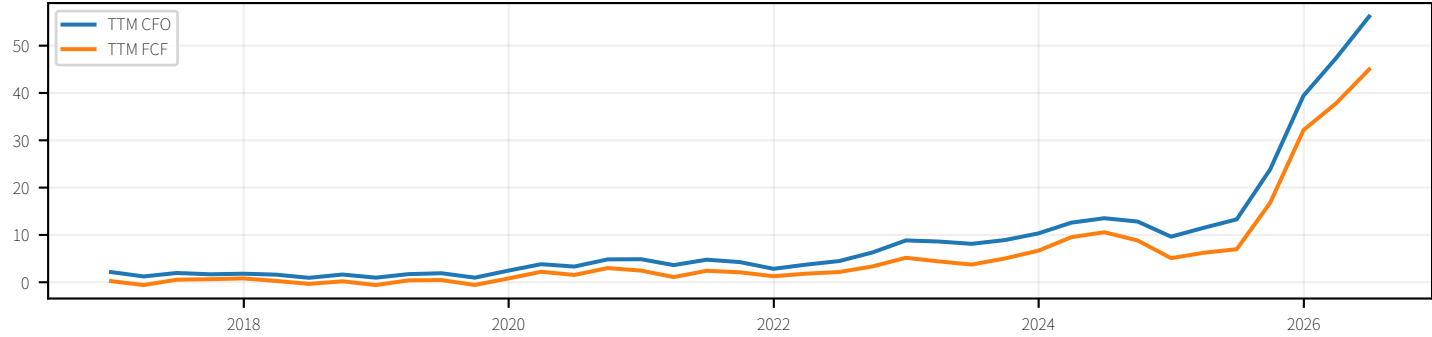

4. Margins (%)

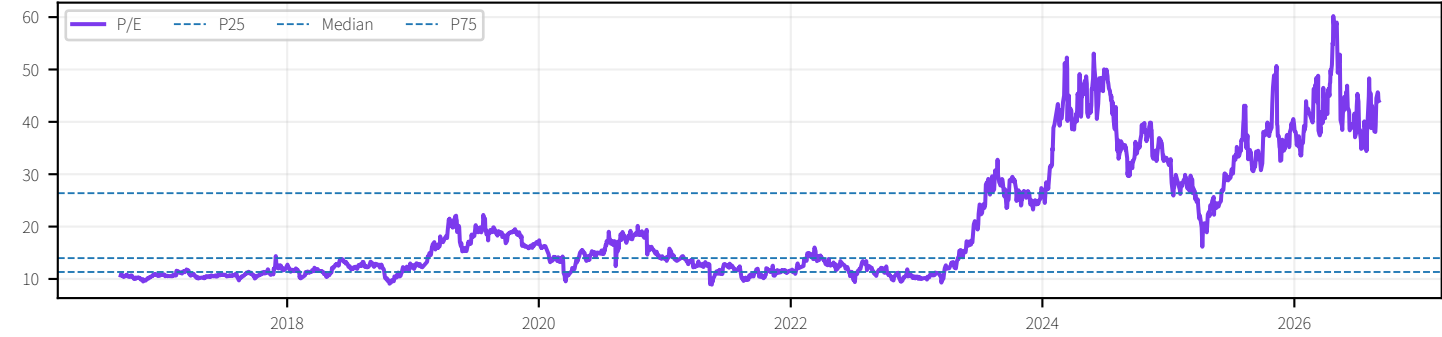

5. ROE / ROIC (%)

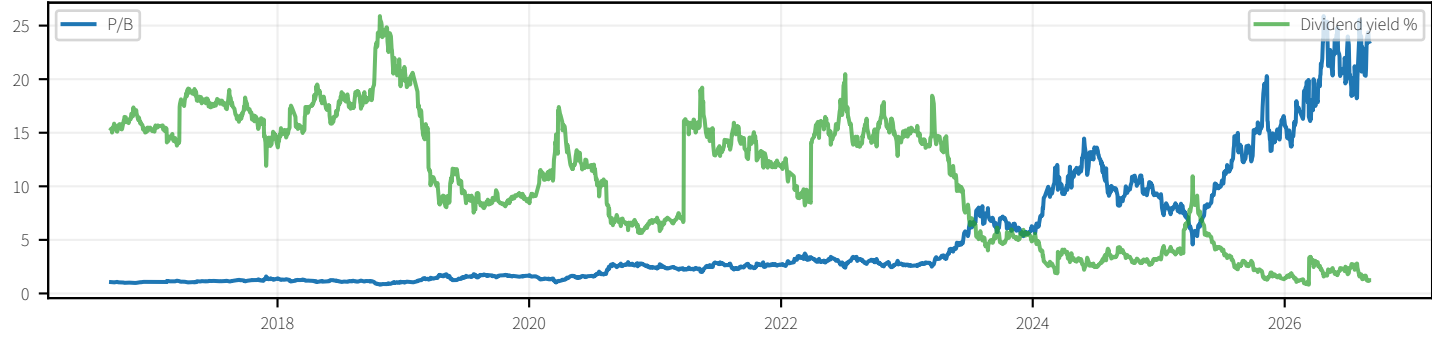

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

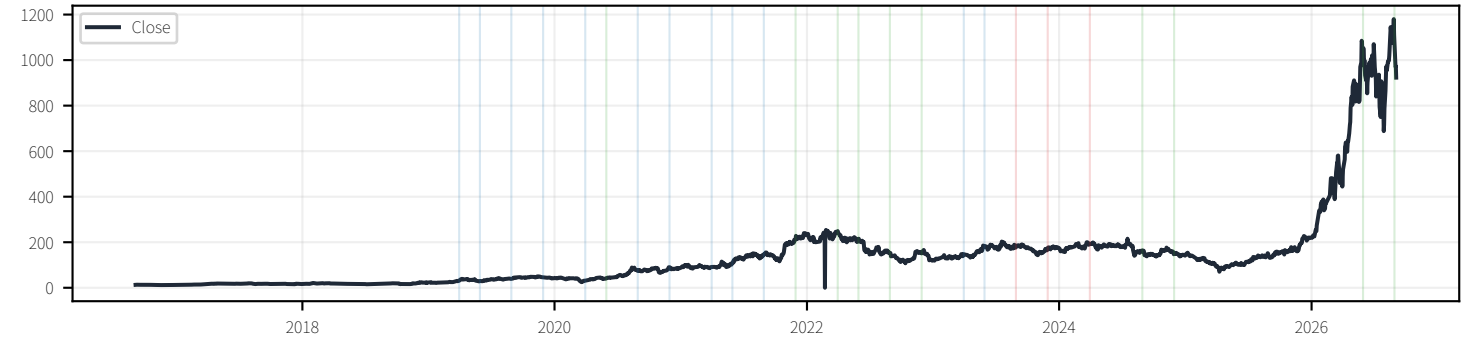

8. P/B / dividend yield

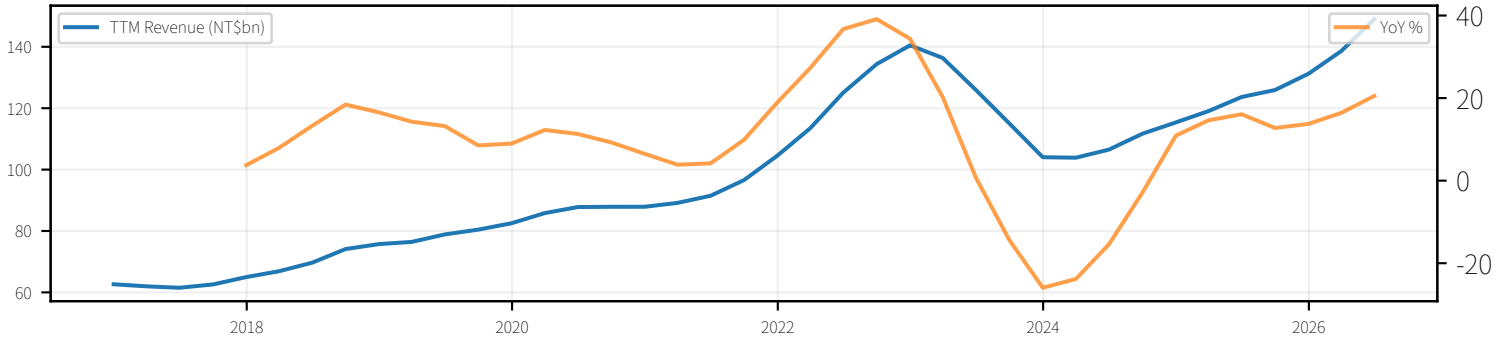

Quality: ROE, ROIC and operating margin meet the durable-profitability gate; Revenue and EPS grew over three years without contradictory FCF evidence; Operating cash flow supports earnings and free cash flow is persistent; Balance-sheet resilience gate is met | State: Revenue and EPS growth have remained positive across eight observations | Valuation: P/E and available P/B context are in the highest historical quartile

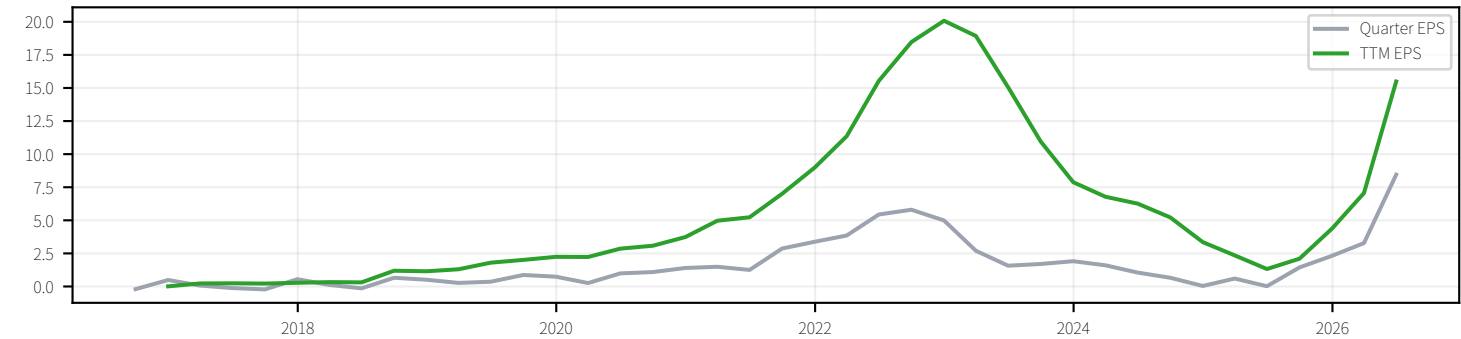

1. Price + fundamental-state transitions

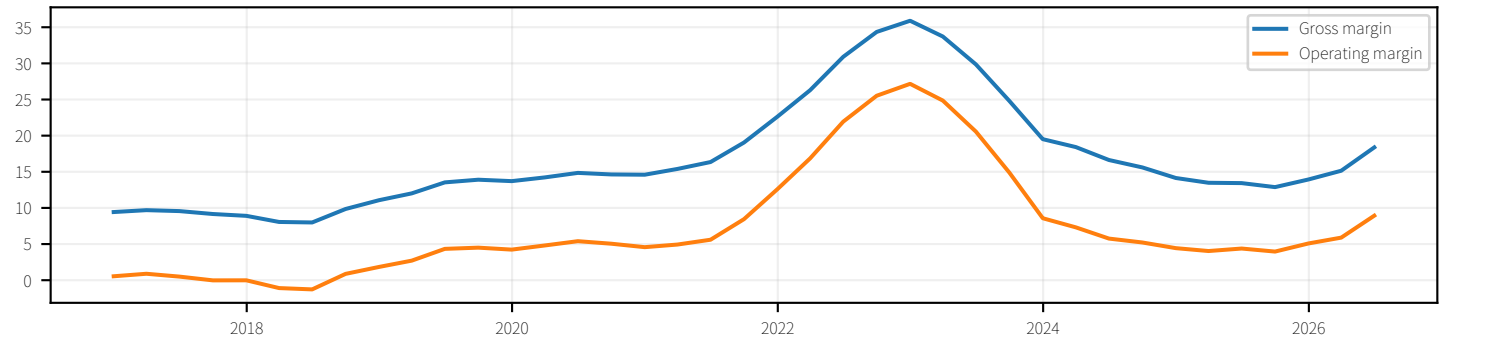

2. Revenue / revenue growth

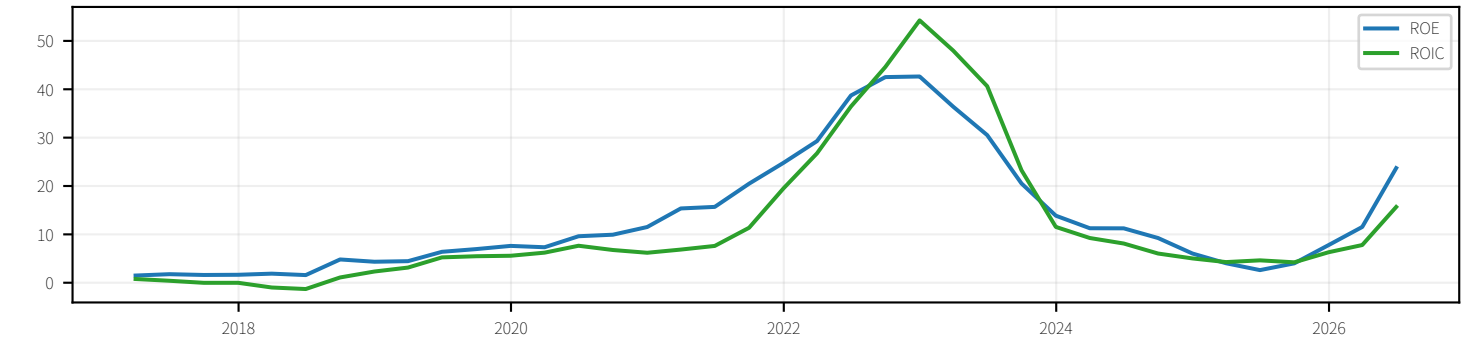

3. EPS / TTM EPS

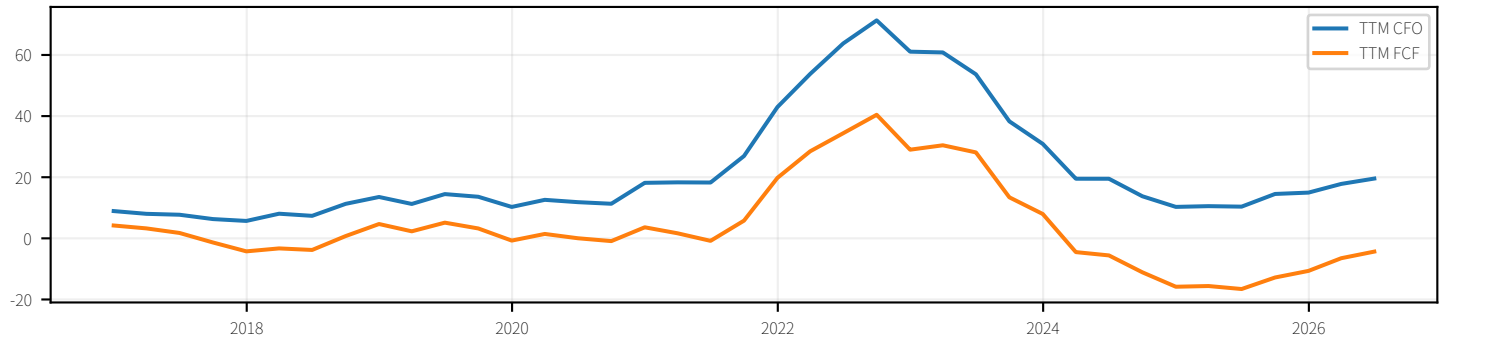

4. Margins (%)

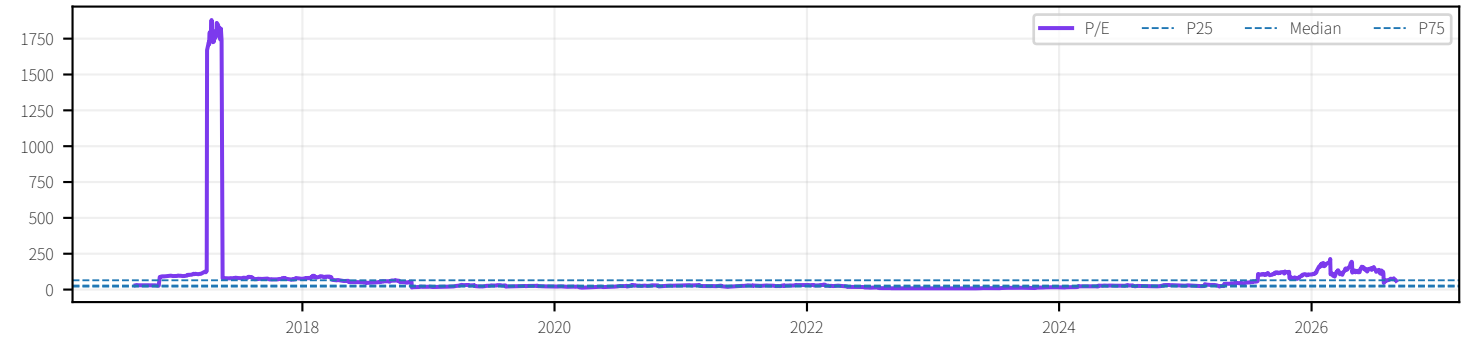

5. ROE / ROIC (%)

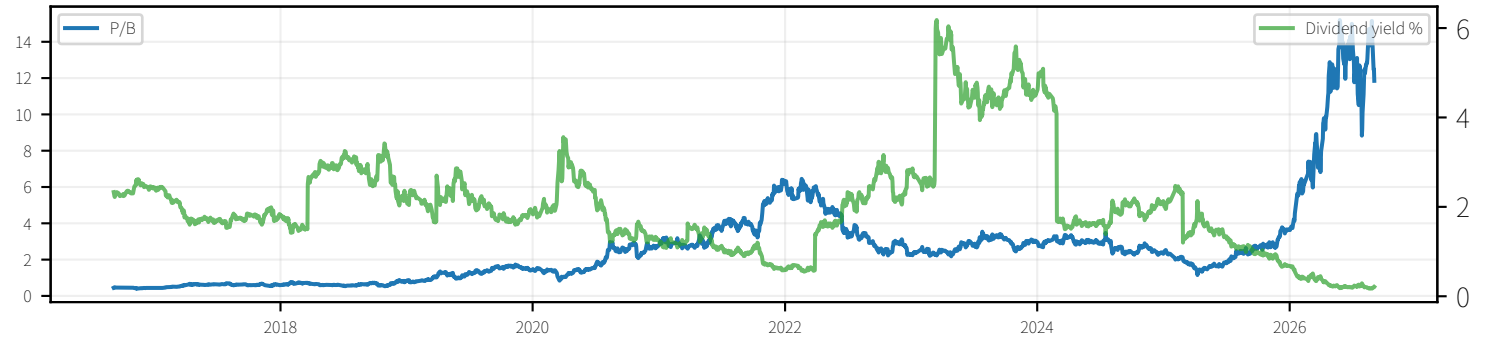

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

8. P/B / dividend yield

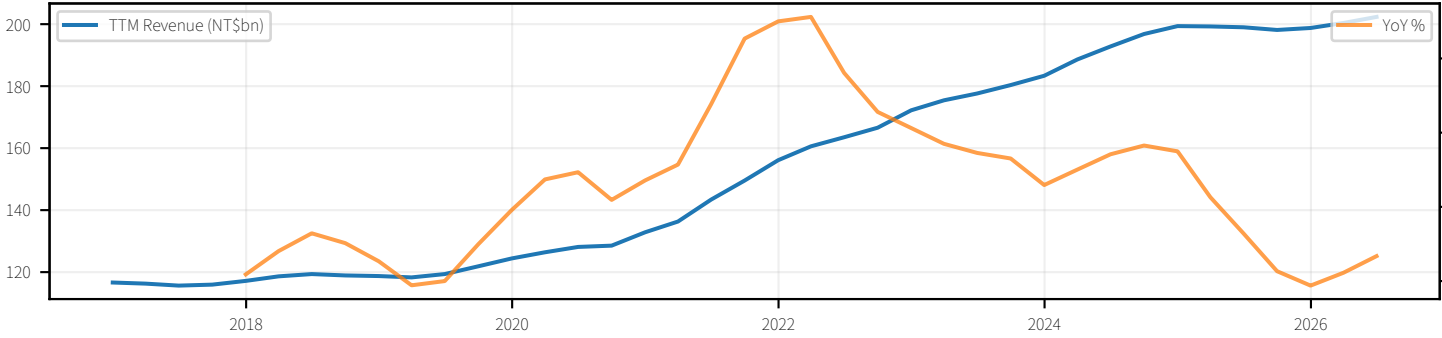

Quality: ROE, ROIC and operating margin meet the durable-profitability gate; Revenue and EPS grew over three years without contradictory FCF evidence; Balance-sheet resilience gate is met | State: Revenue growth is in an early recovery and at least one independent fundamental family corroborates it | Valuation: Valuation is within the model's middle historical context

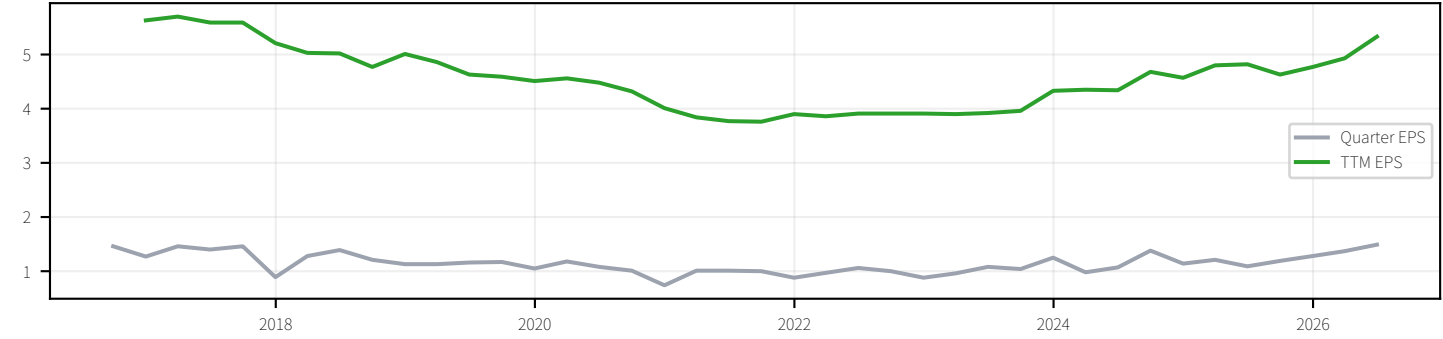

1. Price + fundamental-state transitions

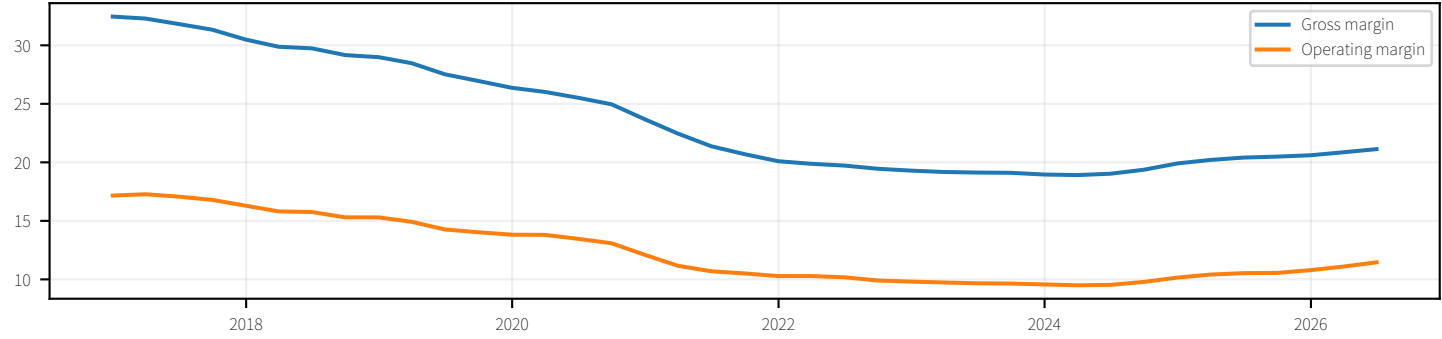

2. Revenue / revenue growth

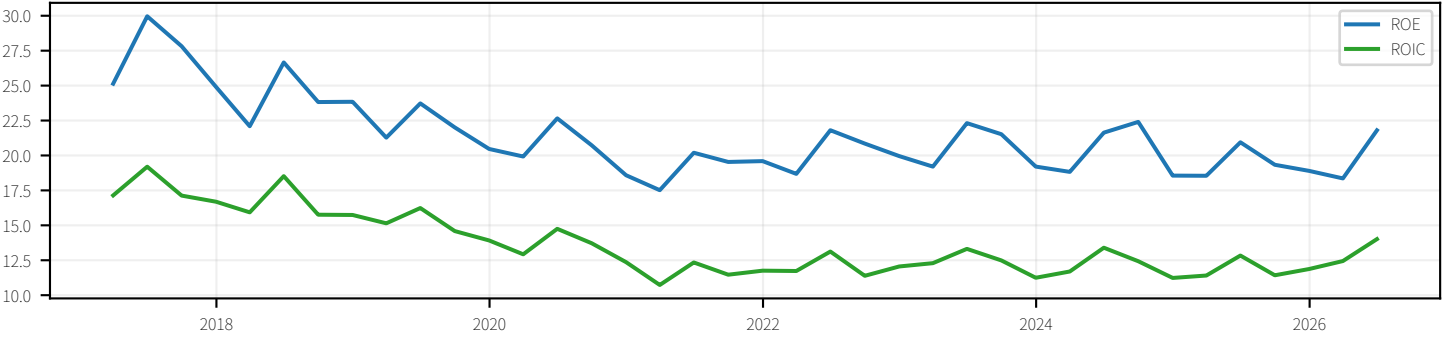

3. EPS / TTM EPS

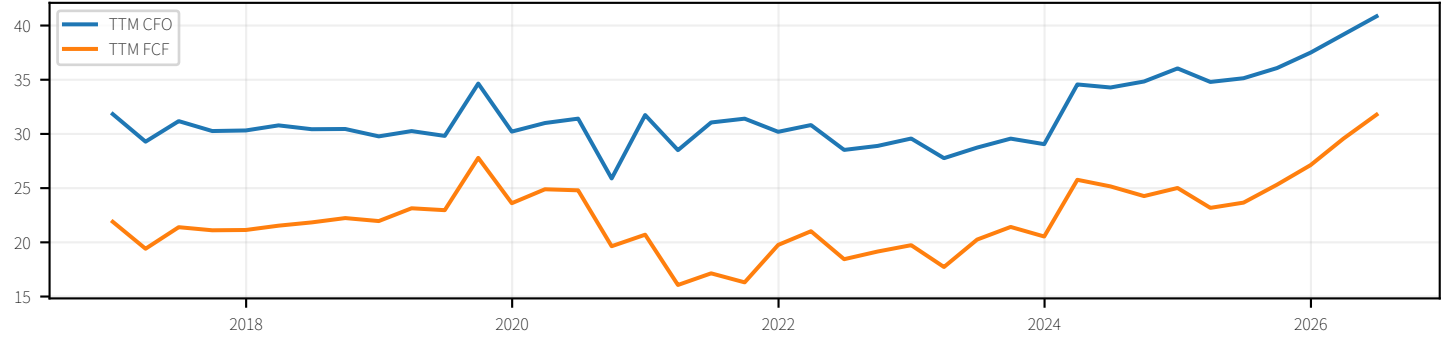

4. Margins (%)

5. ROE / ROIC (%)

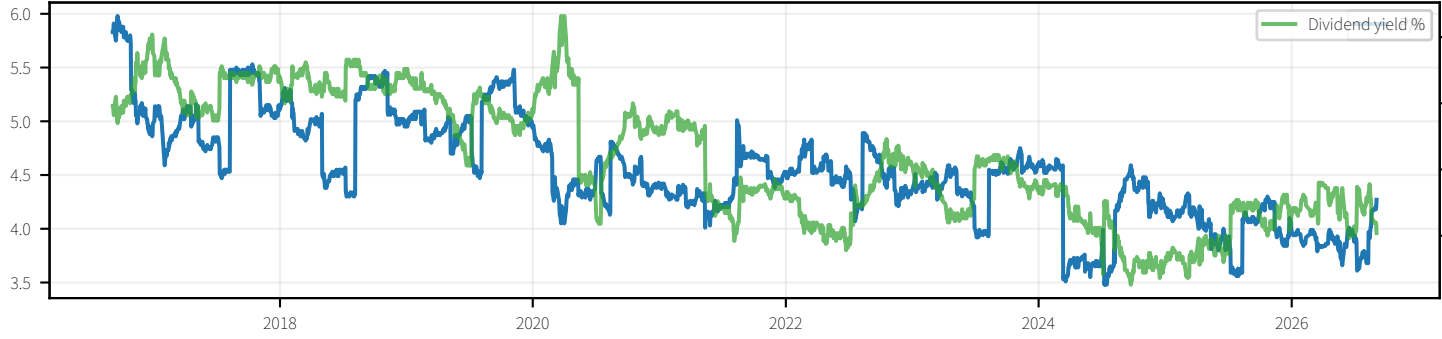

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

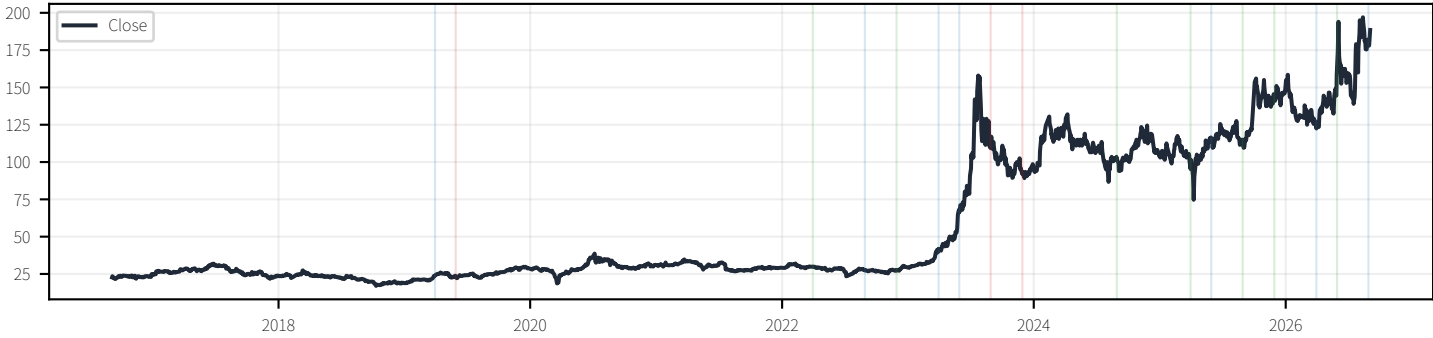

8. P/B / dividend yield

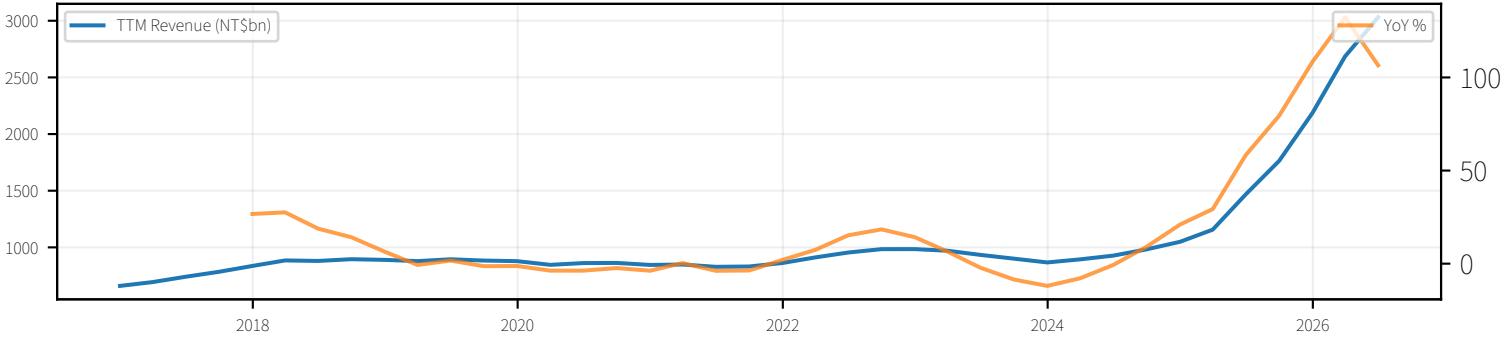

Quality: ROE, ROIC and operating margin meet the durable-profitability gate; Revenue and EPS grew over three years without contradictory FCF evidence; Operating cash flow supports earnings and free cash flow is persistent | State: Revenue growth is in an early recovery and at least one independent fundamental family corroborates it | Valuation: Valuation is within the model's middle historical context

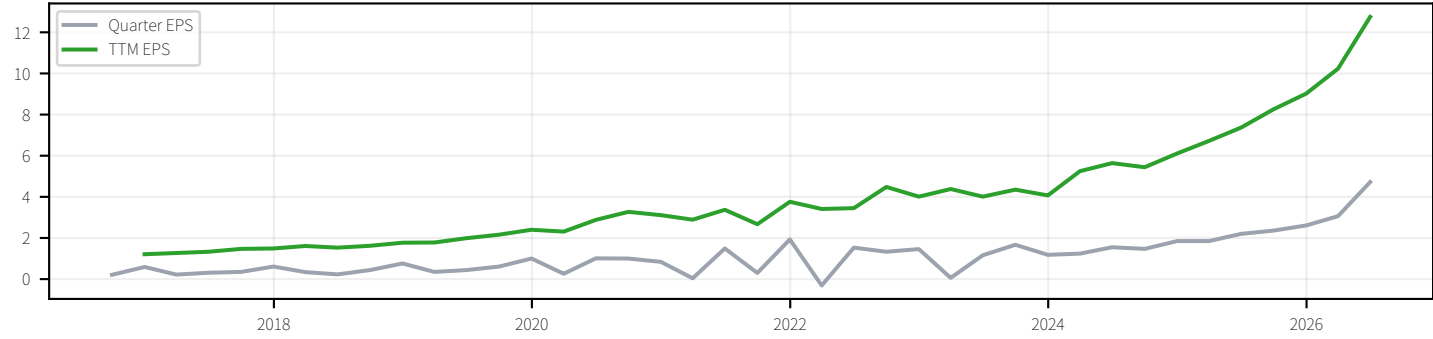

1. Price + fundamental-state transitions

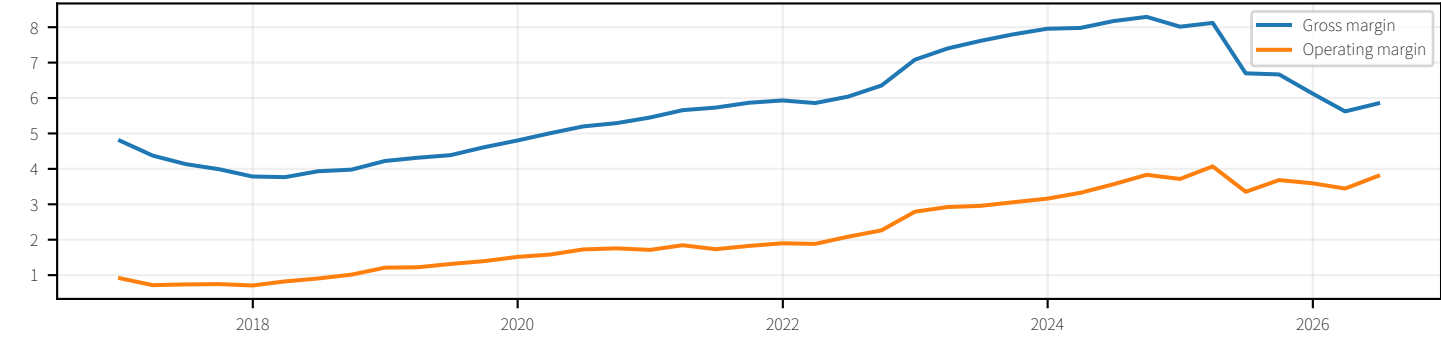

2. Revenue / revenue growth

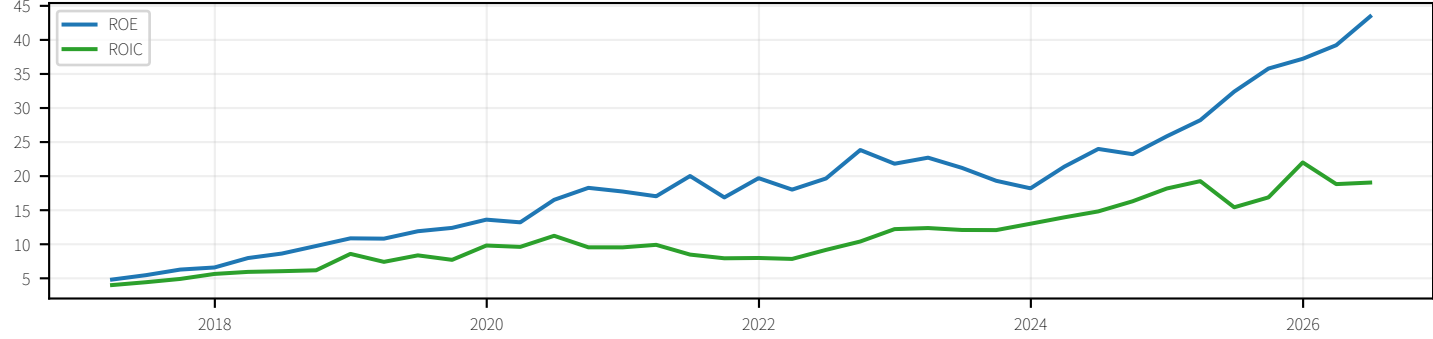

3. EPS / TTM EPS

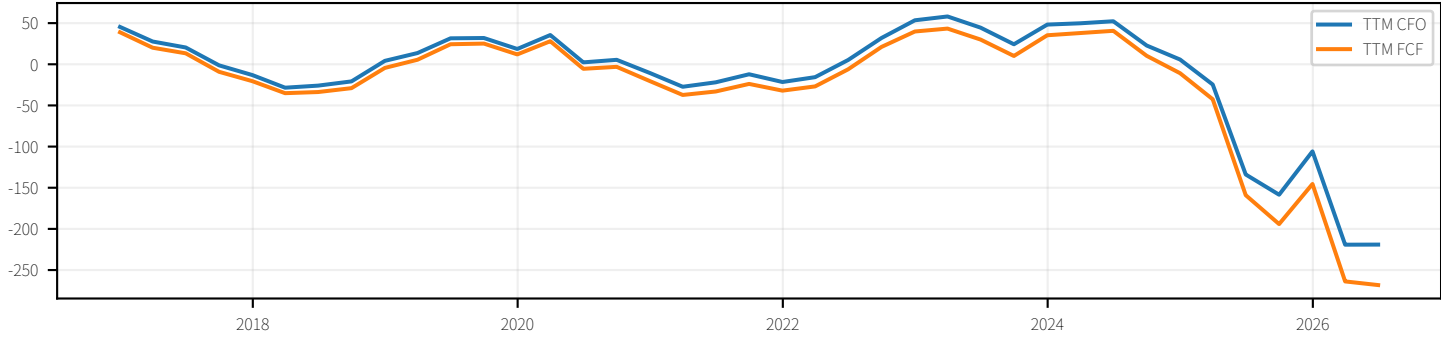

4. Margins (%)

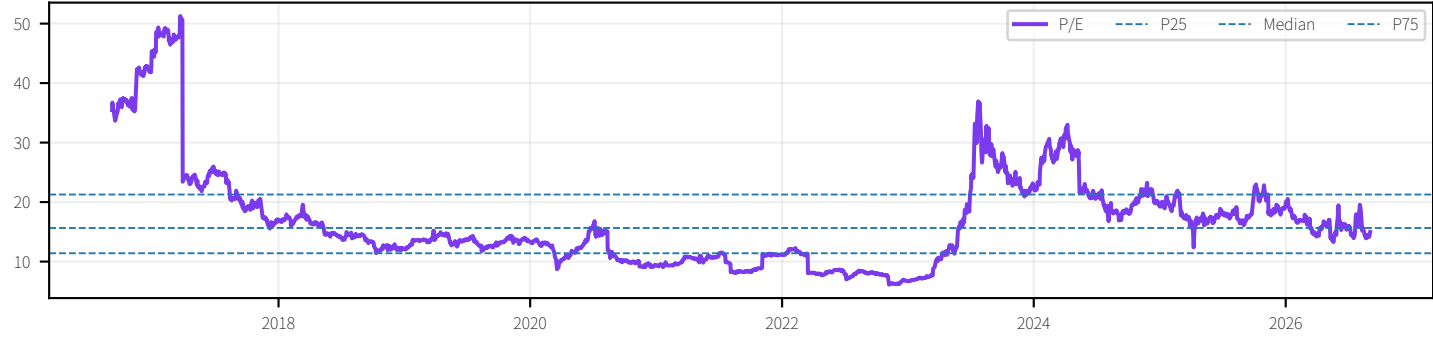

5. ROE / ROIC (%)

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

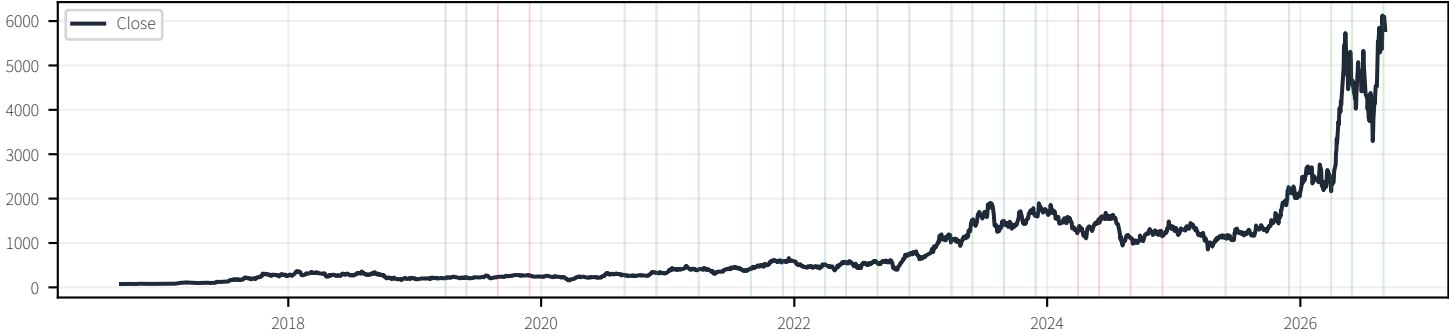

8. P/B / dividend yield

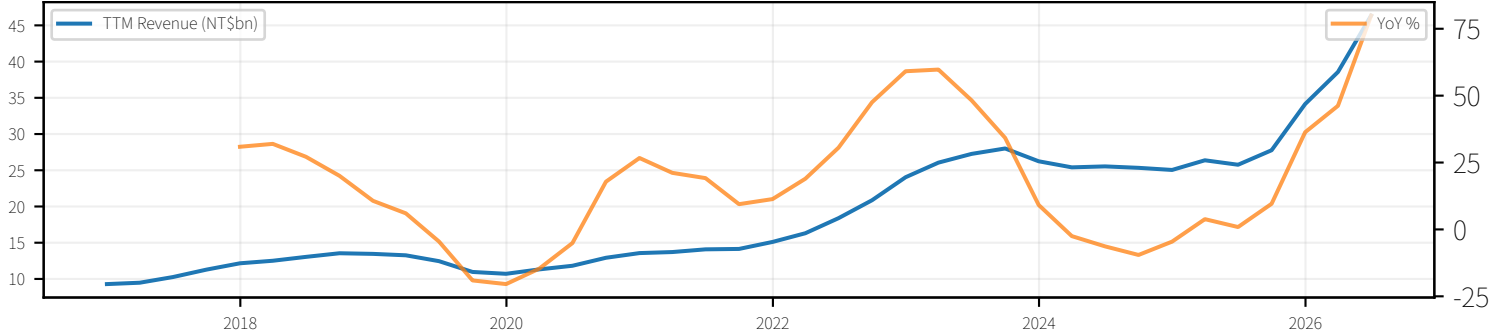

Quality: Free cash flow was positive in fewer than half of observed TTM periods | State: Revenue and EPS growth have remained positive across eight observations | Valuation: Valuation is within the model's middle historical context

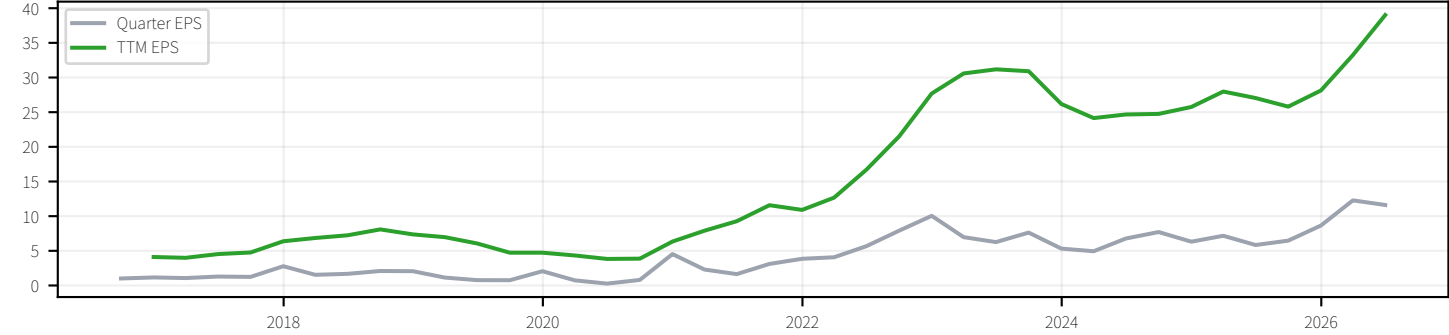

1. Price + fundamental-state transitions

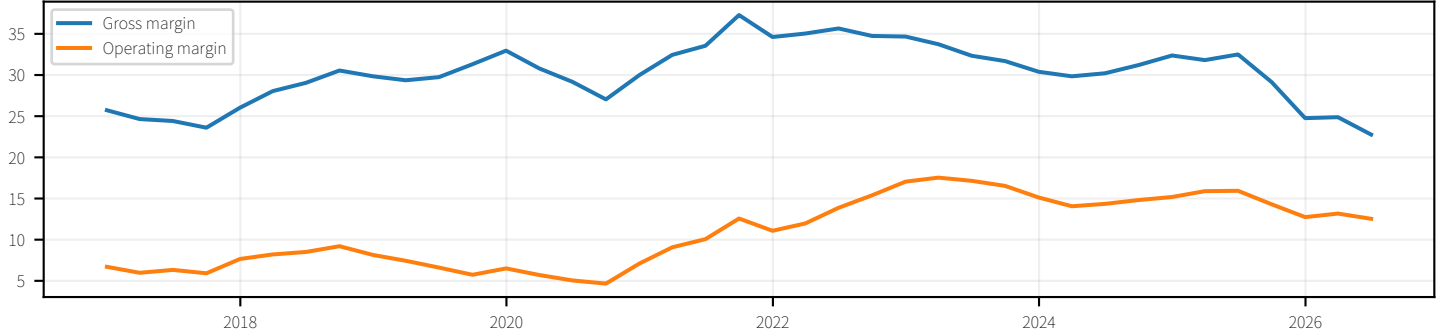

2. Revenue / revenue growth

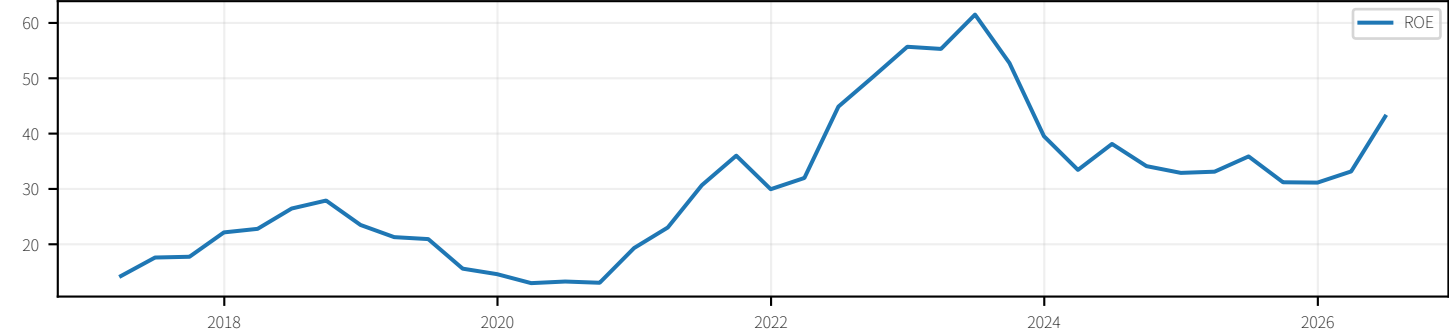

3. EPS / TTM EPS

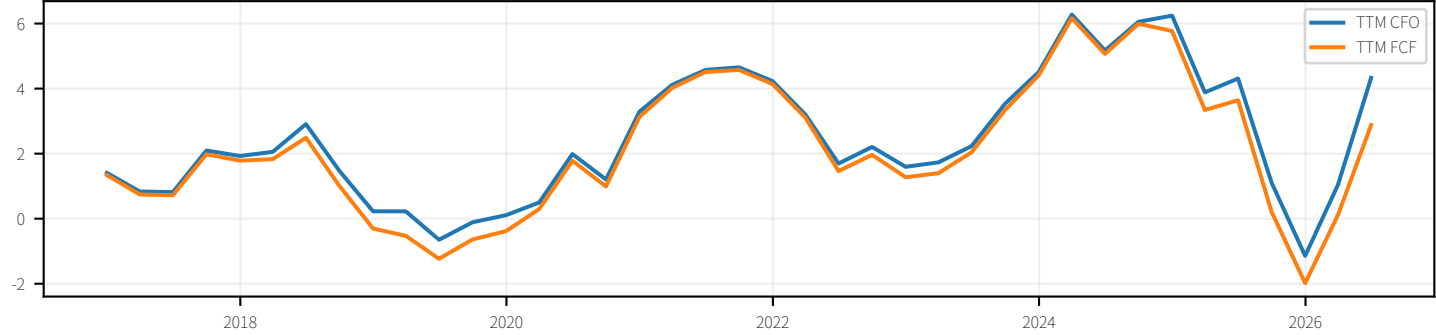

4. Margins (%)

5. ROE / ROIC (%)

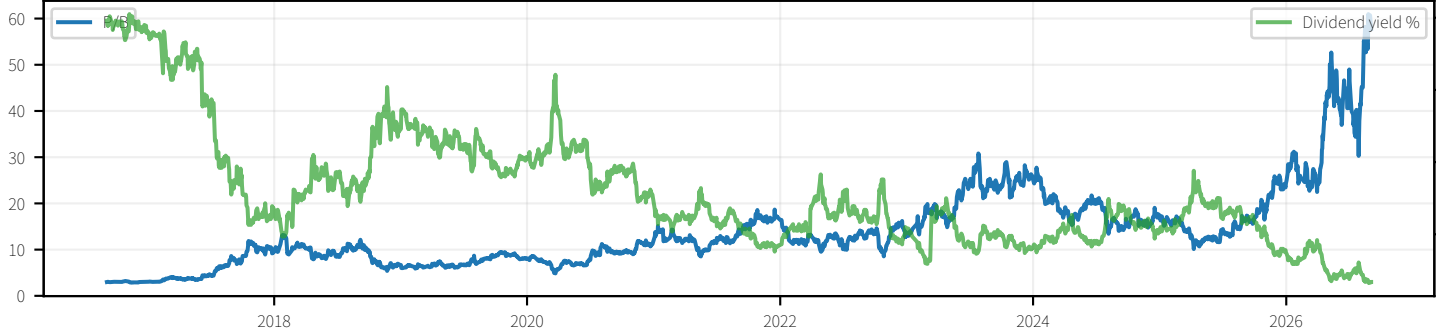

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

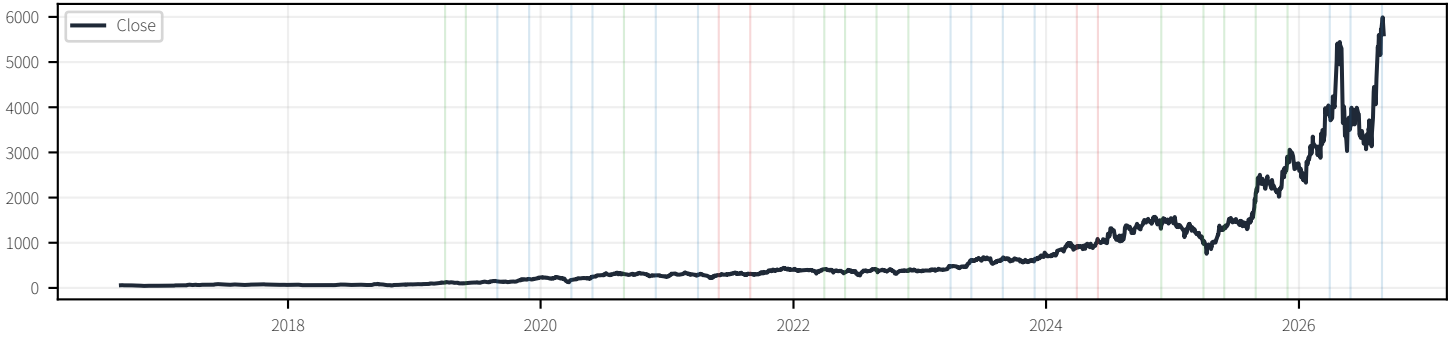

8. P/B / dividend yield

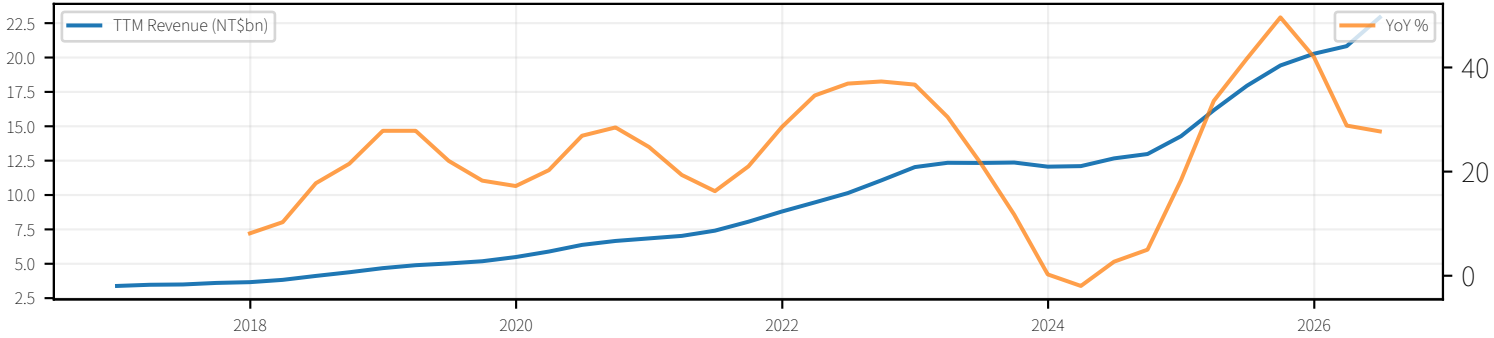

Quality: Minimum historical metric coverage is not met | State: Revenue growth is in an early recovery and at least one independent fundamental family corroborates it | Valuation: P/E and available P/B context are in the highest historical quartile

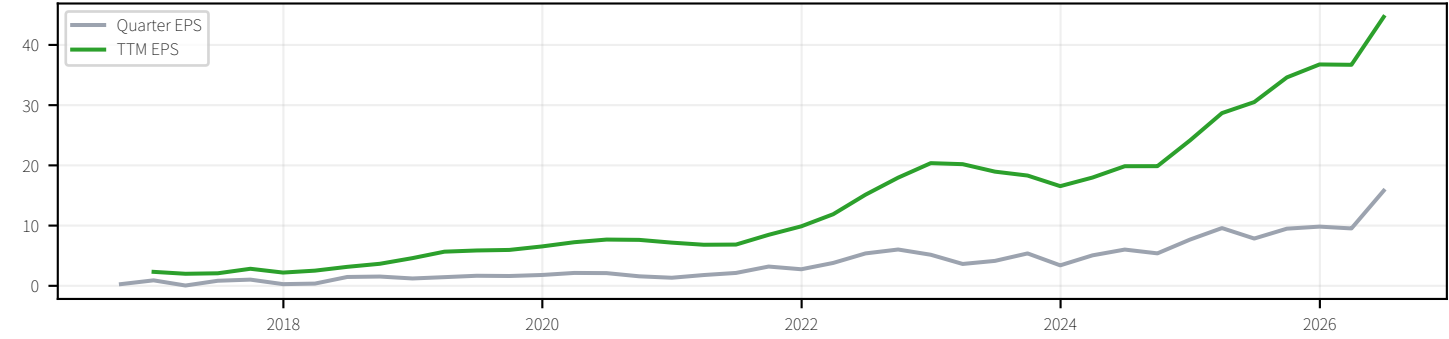

1. Price + fundamental-state transitions

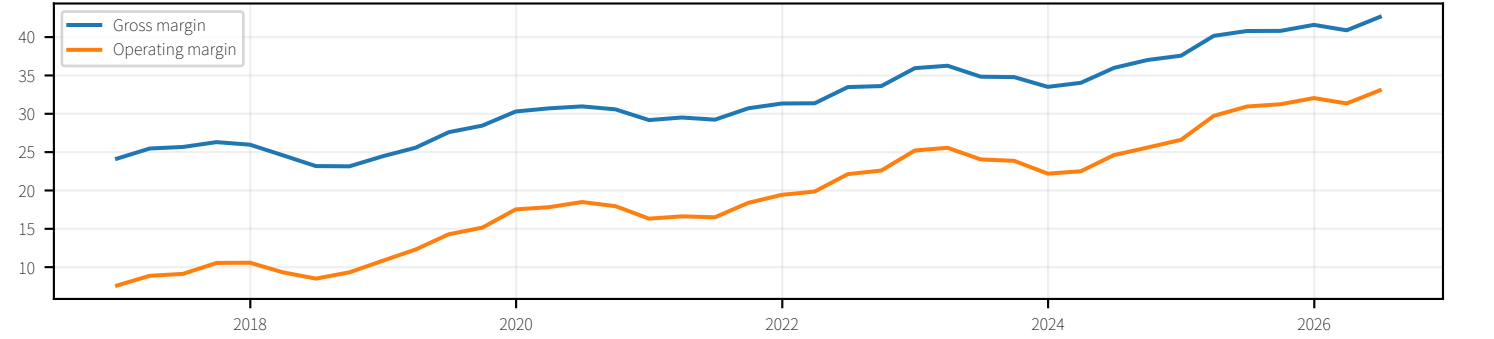

2. Revenue / revenue growth

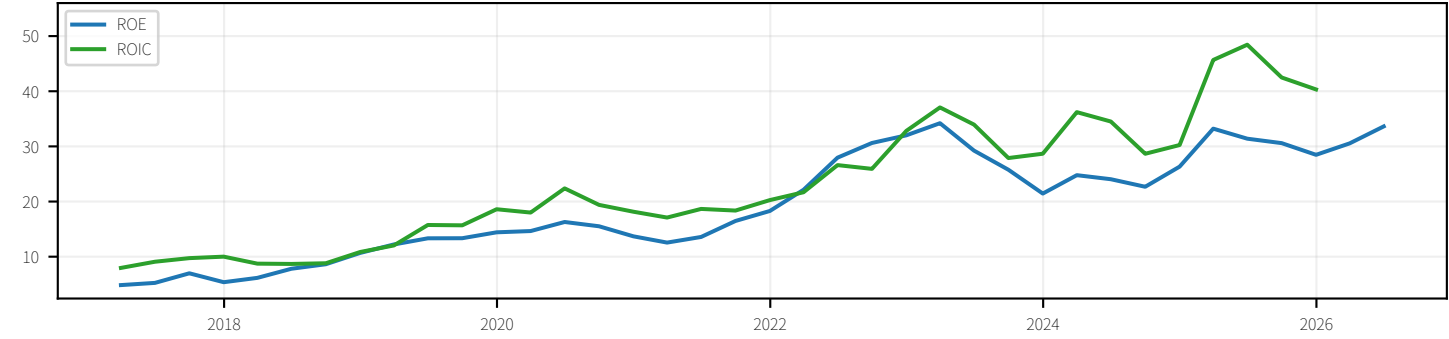

3. EPS / TTM EPS

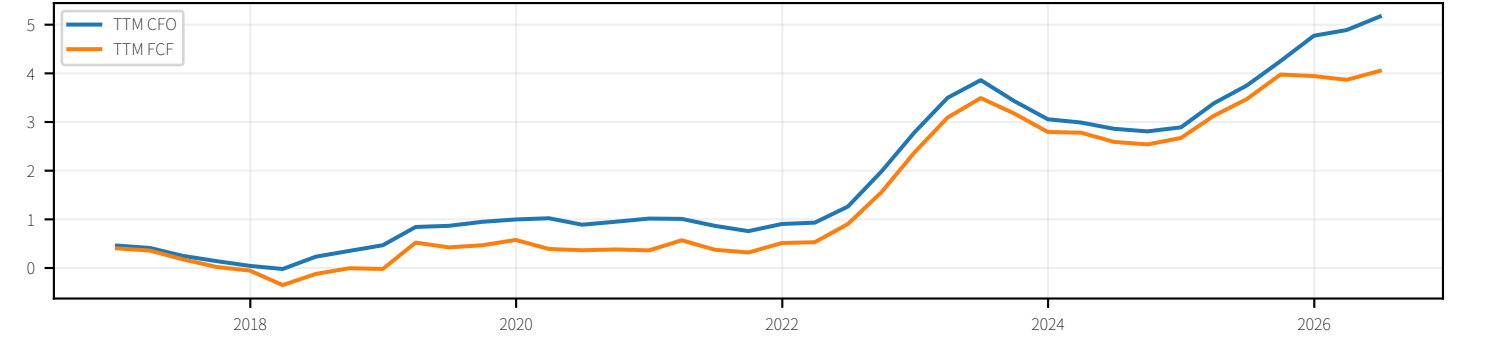

4. Margins (%)

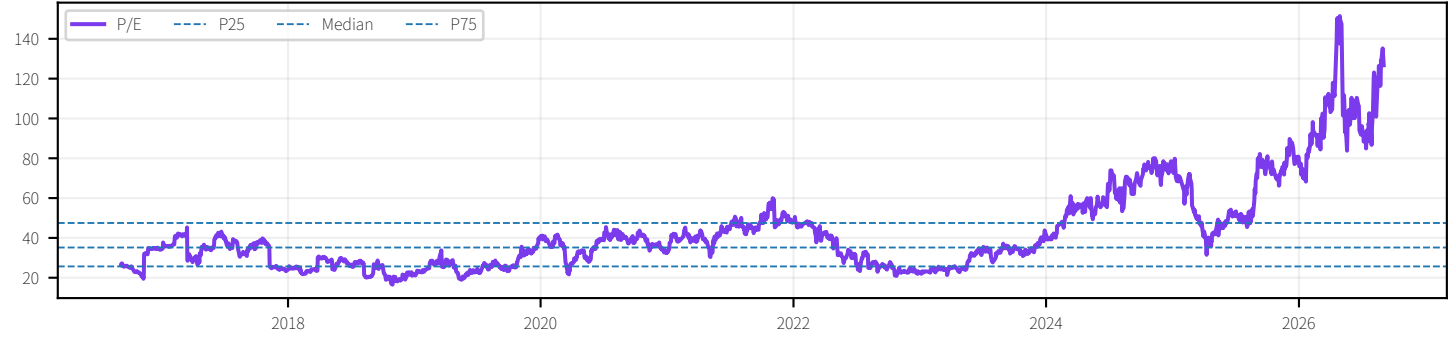

5. ROE / ROIC (%)

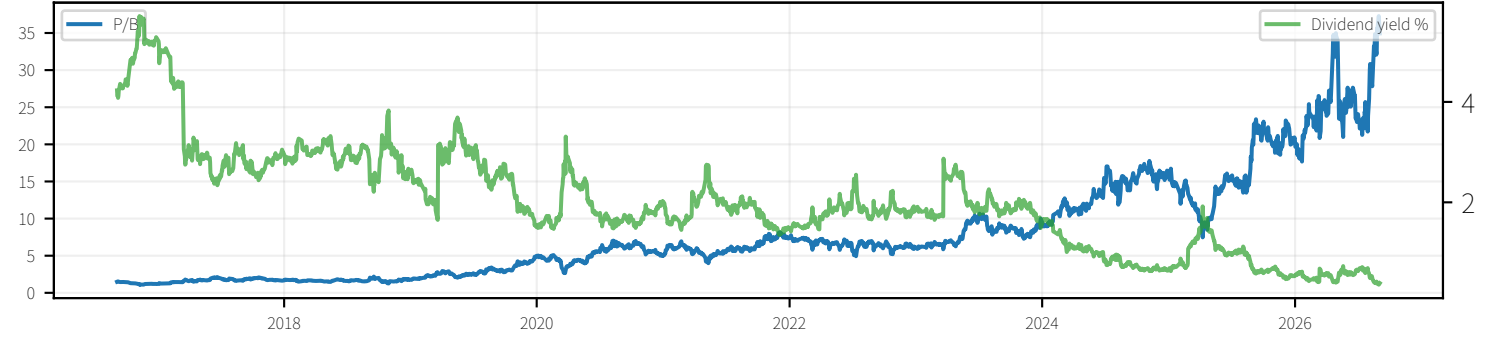

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

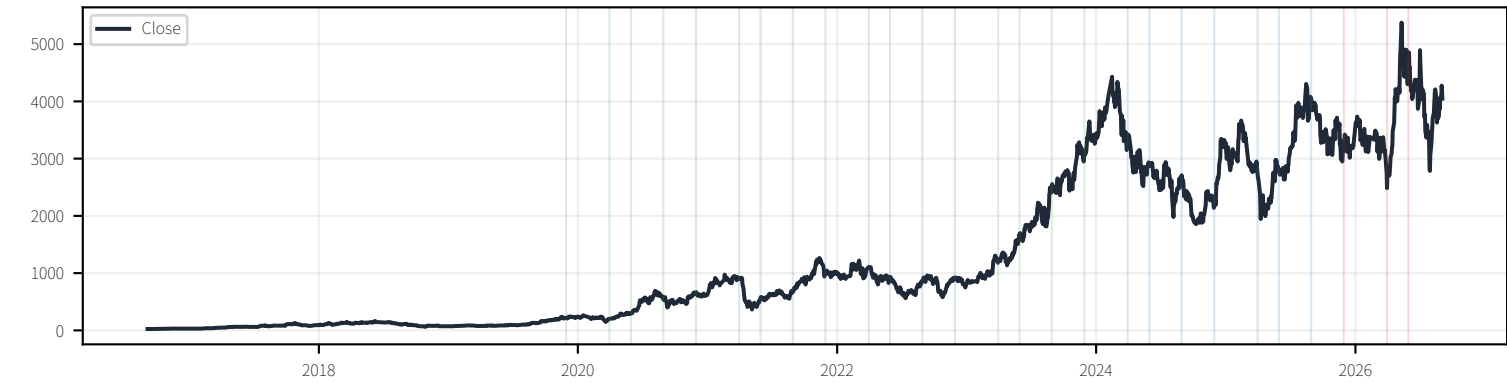

8. P/B / dividend yield

Quality: ROE, ROIC and operating margin meet the durable-profitability gate; Revenue and EPS grew over three years without contradictory FCF evidence; Operating cash flow supports earnings and free cash flow is persistent; Balance-sheet resilience gate is met | State: Revenue and EPS growth have remained positive across eight observations | Valuation: P/E and available P/B context are in the highest historical quartile

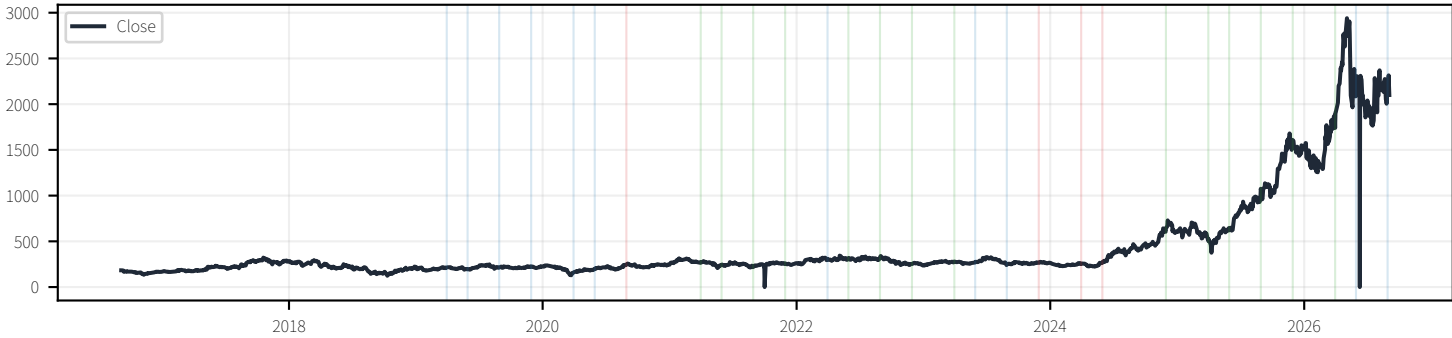

1. Price + fundamental-state transitions

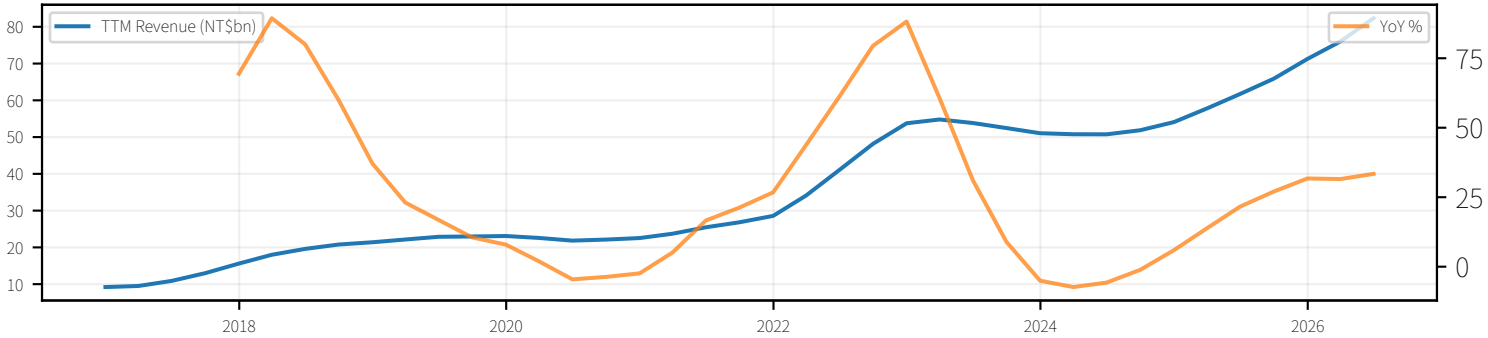

INSUFFICIENT METRIC COVERAGE
40 observed quarters do not meet the per-metric coverage contract.

Known observations remain in the CSV/JSON bundle.
Sparse series are intentionally not connected into potentially misleading charts.

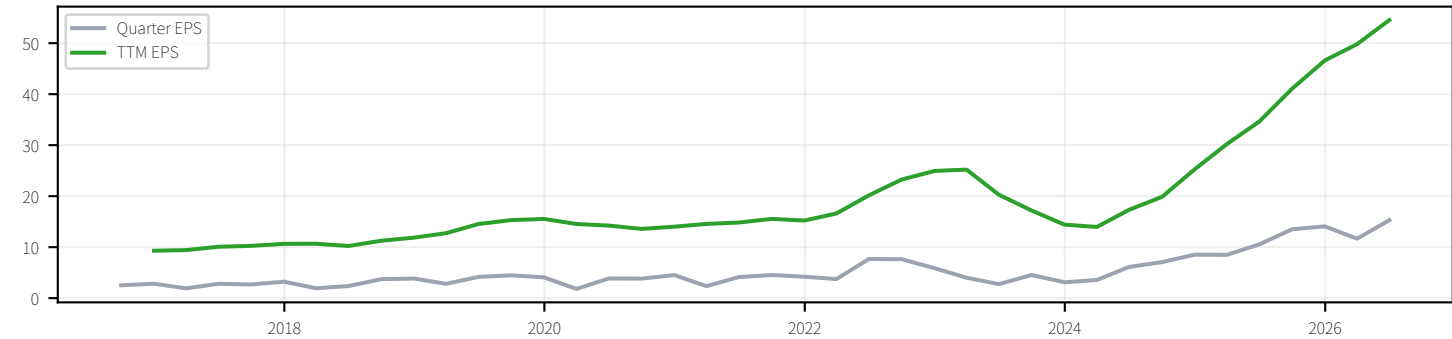

1. Price + fundamental-state transitions

5. ROE / ROIC (%)

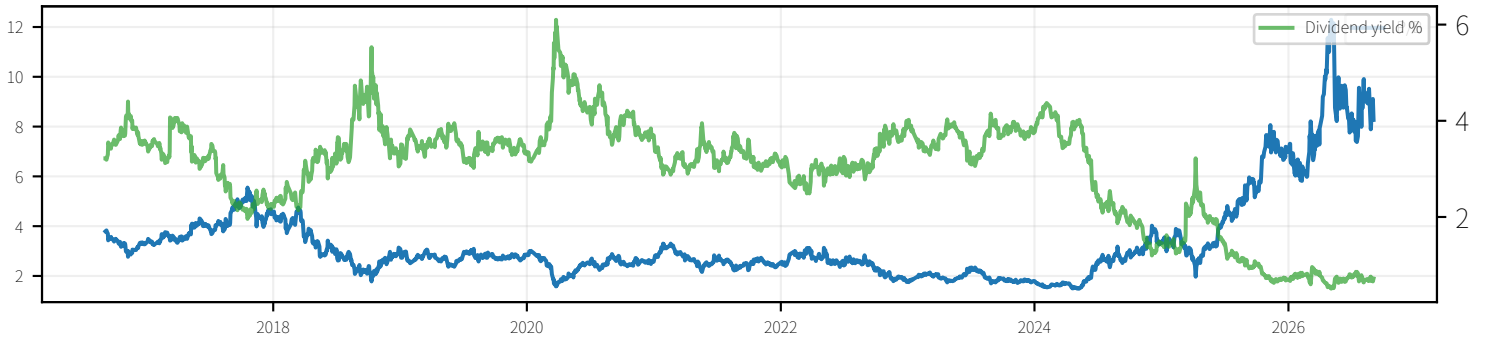

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

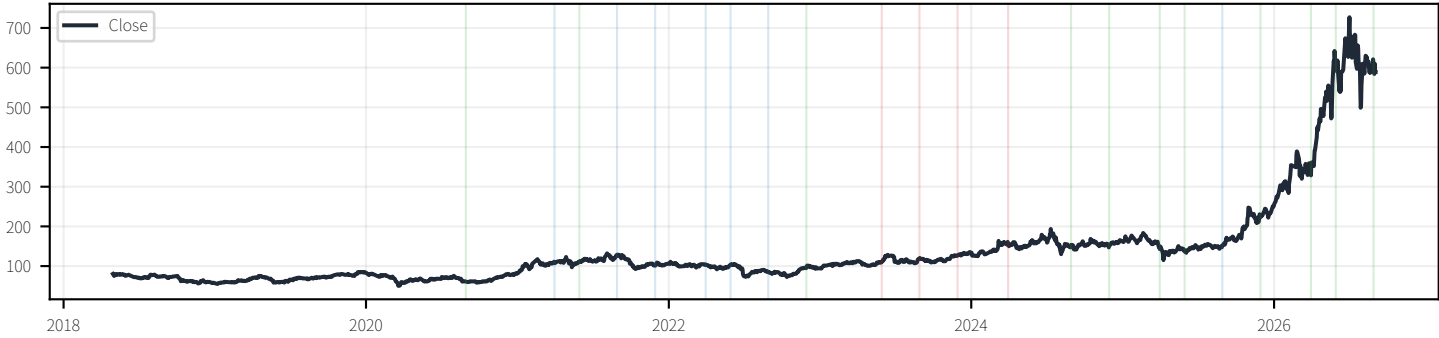

8. P/B / dividend yield

Quality: Operating cash flow supports earnings and free cash flow is persistent; Balance-sheet resilience gate is met | State: Mixed fundamental directions do not satisfy a named state gate | Valuation: Normalized P/E is above the historical upper quartile; Current P/E is materially below normalized P/E; peak-earnings distortion is possible

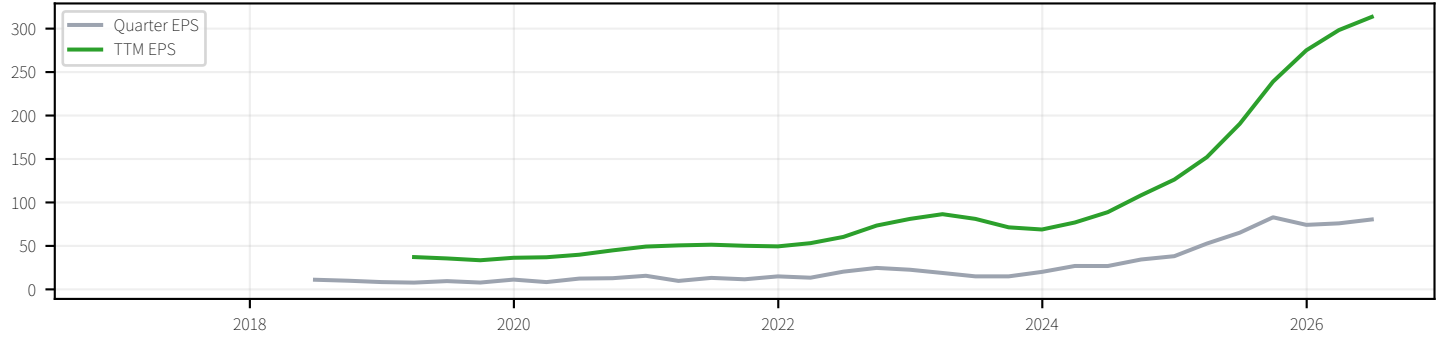

1. Price + fundamental-state transitions

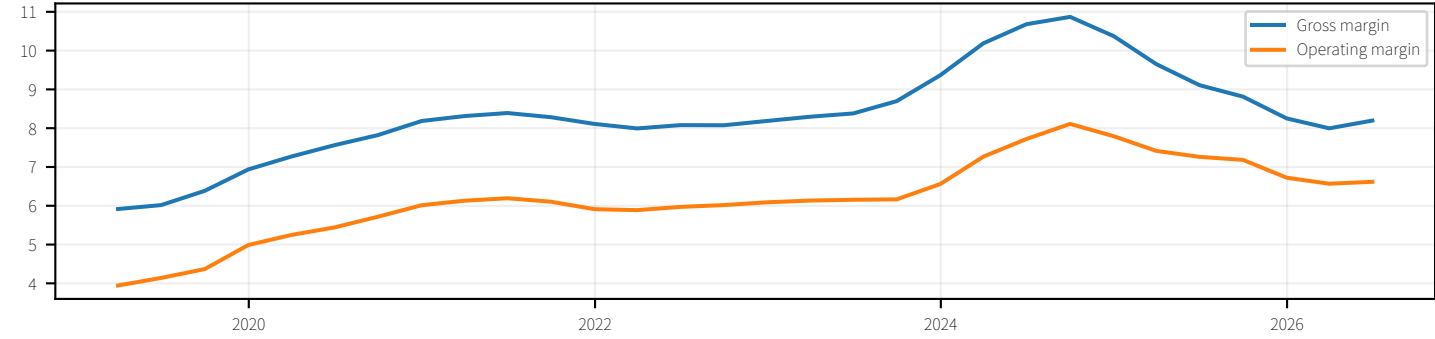

2. Revenue / revenue growth

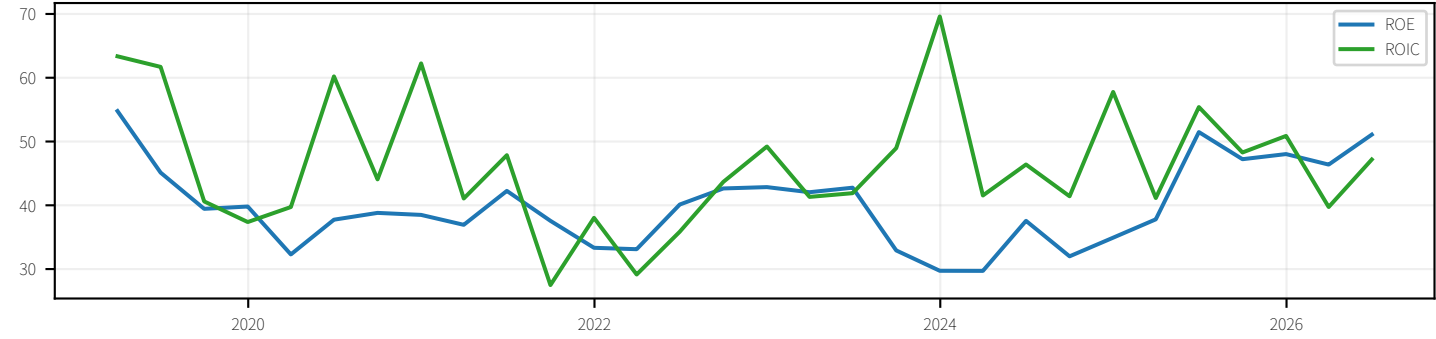

3. EPS / TTM EPS

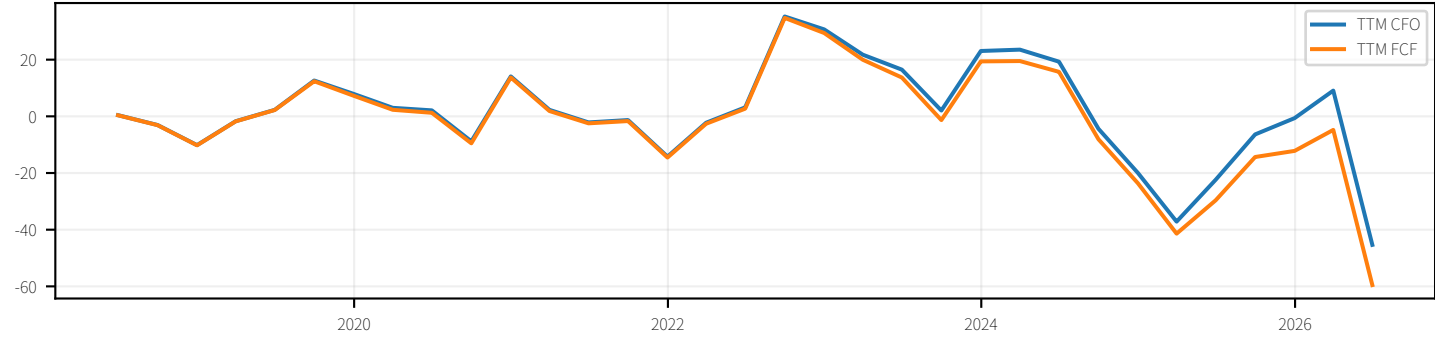

4. Margins (%)

5. ROE / ROIC (%)

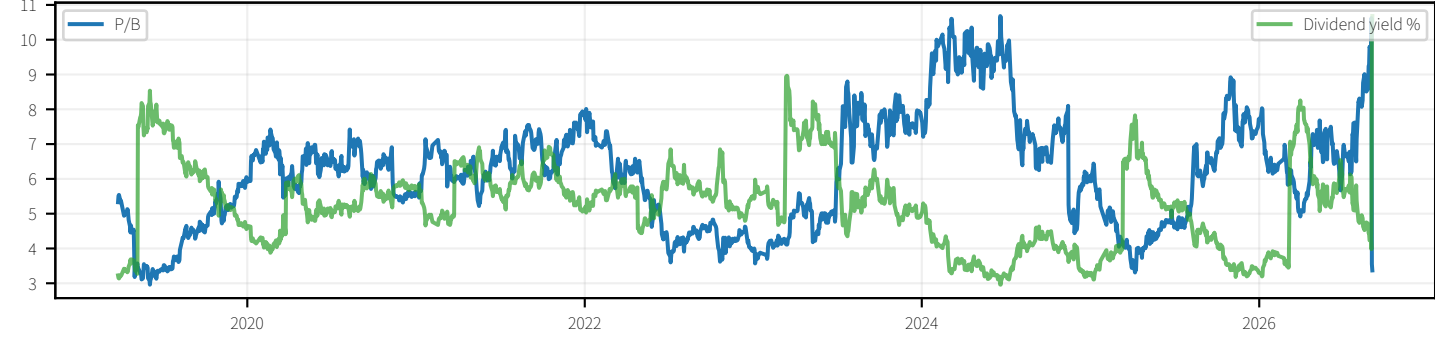

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

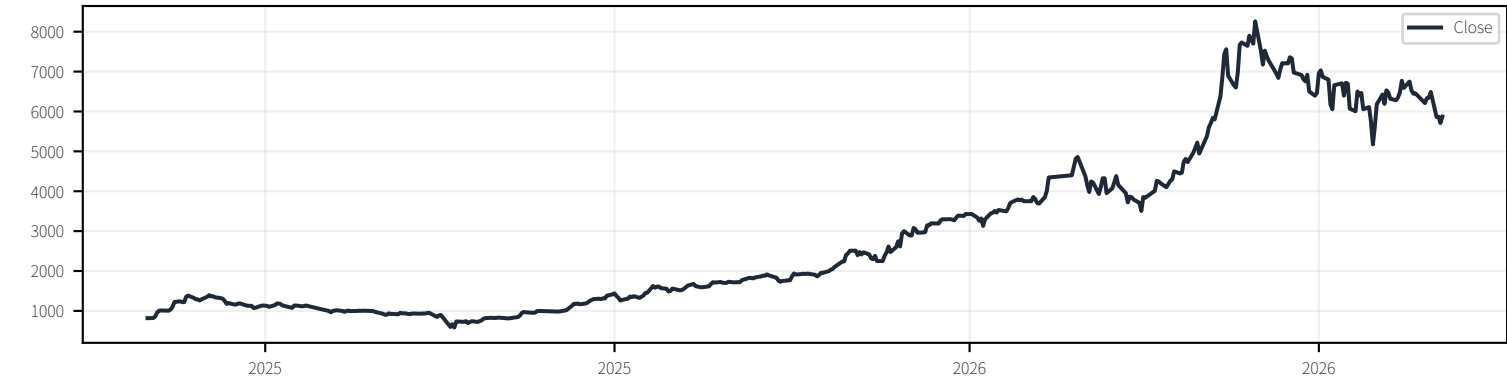

8. P/B / dividend yield

Quality: Free cash flow was positive in fewer than half of observed TTM periods | State: Revenue and EPS remain positive but have decelerated for three observations | Valuation: P/E is in the lowest historical quartile with P/B or positive-FCF corroboration

1. Price + fundamental-state transitions

INSUFFICIENT METRIC COVERAGE
12 observed quarters do not meet the per-metric coverage contract.

Known observations remain in the CSV/JSON bundle.
Sparse series are intentionally not connected into potentially misleading charts.

1. Price + fundamental-state transitions

SOURCE HISTORY PROVENANCE UNSTABLE

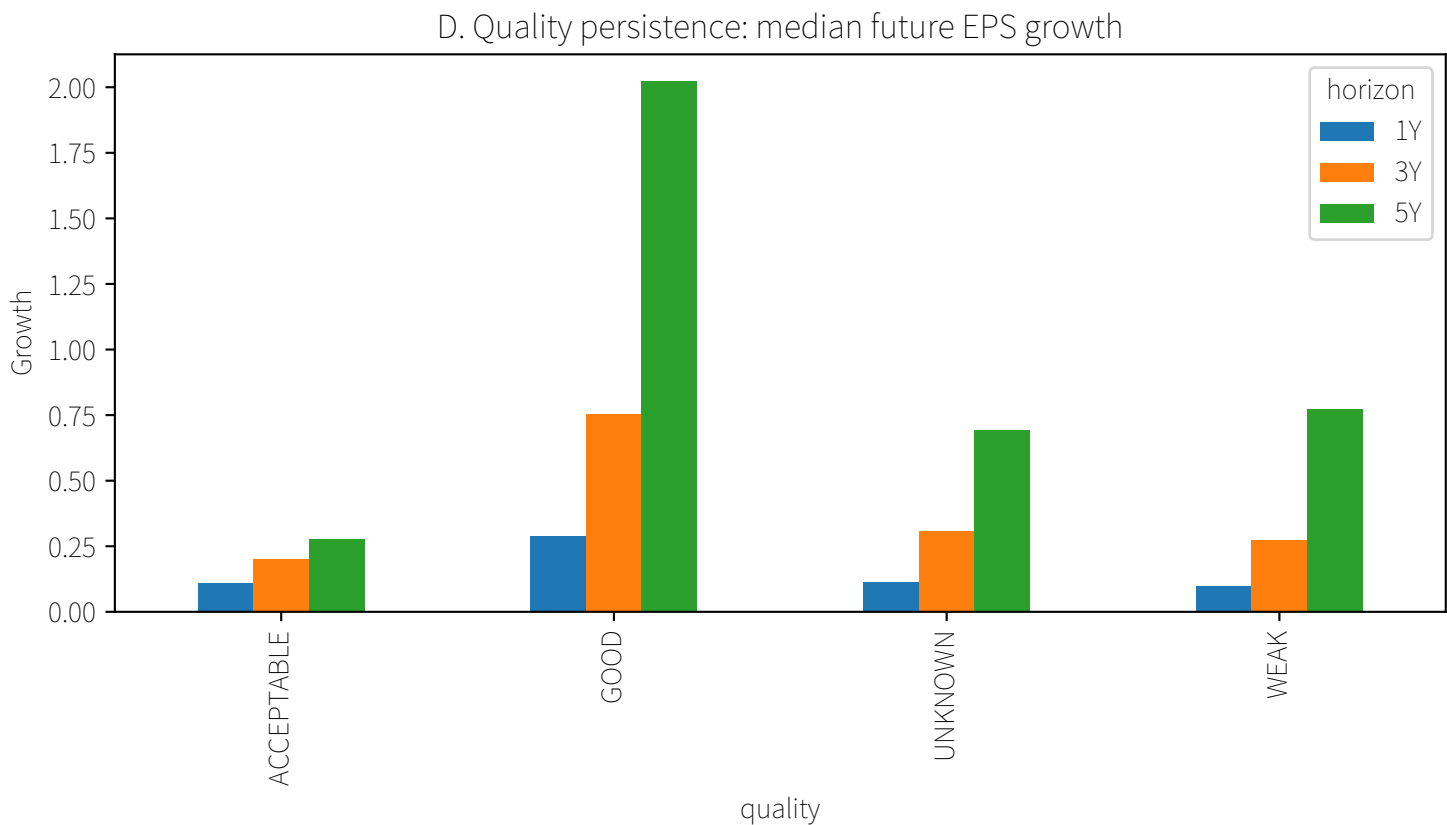

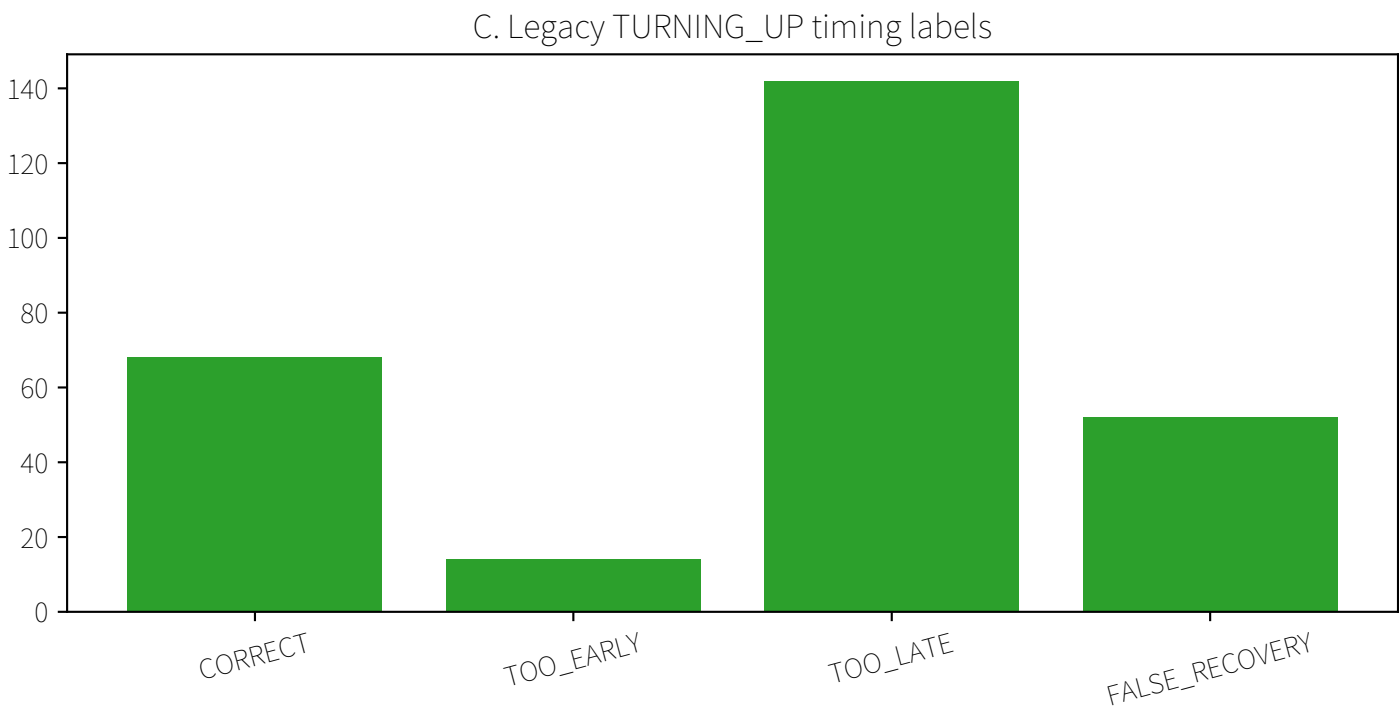

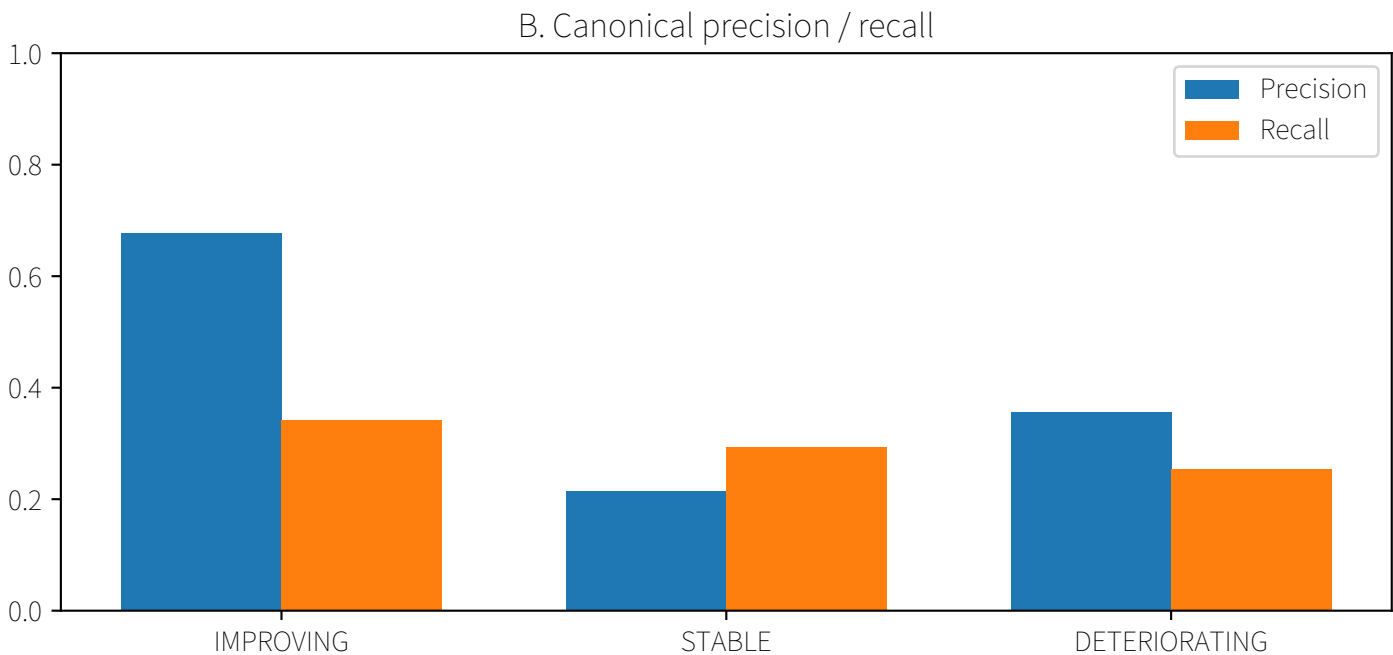

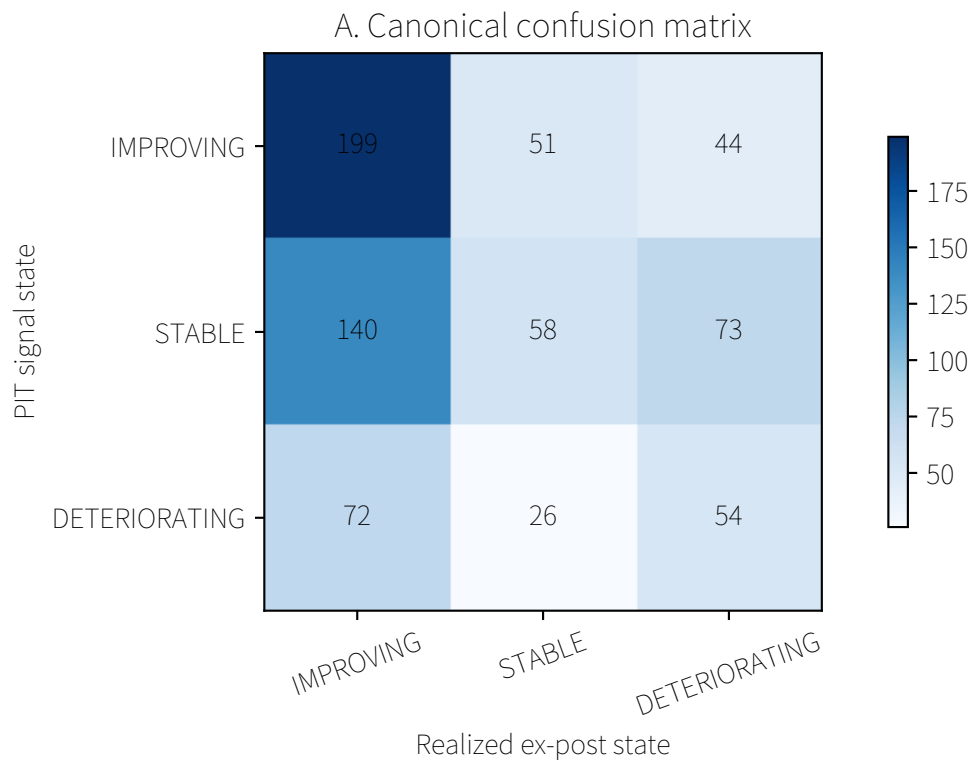

40 vendor quarters now exist, but the reviewed head had a 5-quarter fallback; cross-vintage continuity is unverified.

Known observations remain in the CSV/JSON bundle.
Sparse series are intentionally not connected into potentially misleading charts.

Representative Cases — selection is descriptive, not a ranking

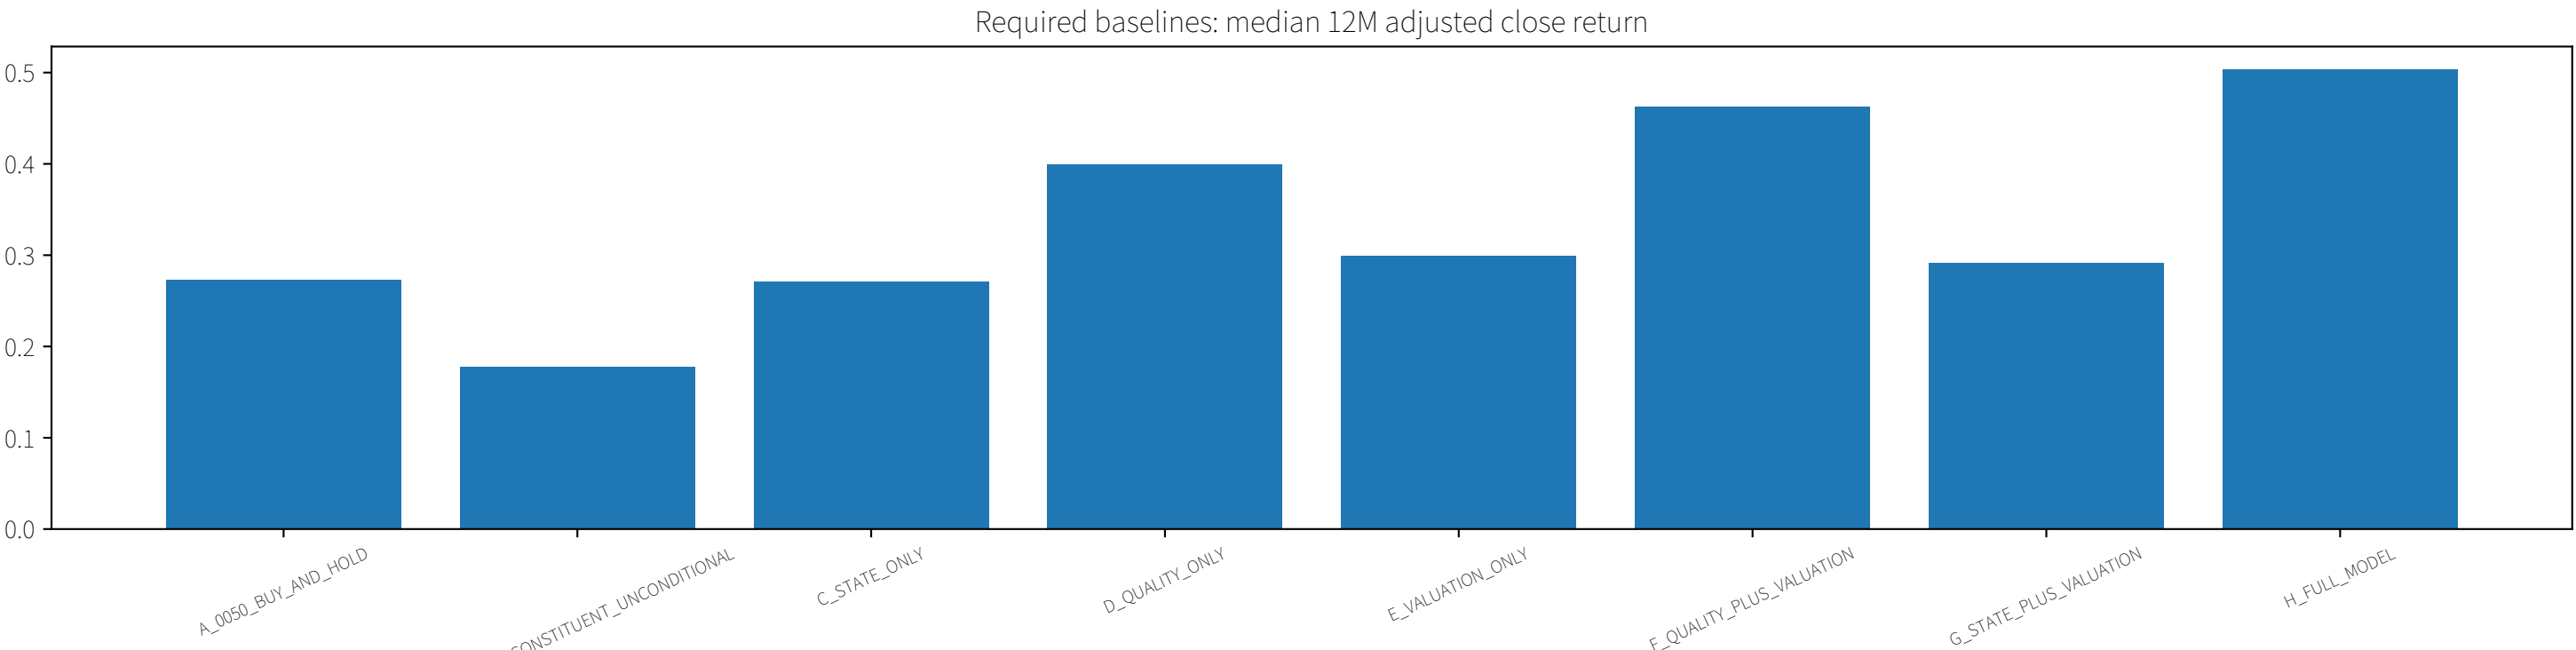

Required case	Selected observation	Why / availability
GOOD + IMPROVING/TURNING_UP + LOW	No current case	No observation satisfies the pre-registered case
GOOD + IMPROVING/TURNING_UP + HIGH	2308 台達電	P/E and available P/B context are in the highest historical quartile
GOOD + STABLE/CONFIRMED_GROWTH	2301 光寶科	P/E and available P/B context are in the highest historical quartile
Possible Value Trap	1216 統一	P/E is in the lowest historical quartile with P/B or positive-FCF corroboration
Cyclical Low-P/E Trap	1303 南亞	Normalized P/E is above the historical upper quartile; Current P/E is materially below normalized P/E; peak-earnings distortion is possible
Financial-sector special case	2880 華南金	Reliable PIT bank/insurance-specific core fields are unavailable in the v0.1 source contract; Financial realized/signal state is unsupported under the v0.1 PIT source contract
TURNING_UP correct historical case	1216 統一 (2022-08-29)	CORRECT
TURNING_UP incorrect historical case	1216 統一 (2022-11-29)	FALSE_RECOVERY

Layer 1 — Fundamental State Identification Accuracy

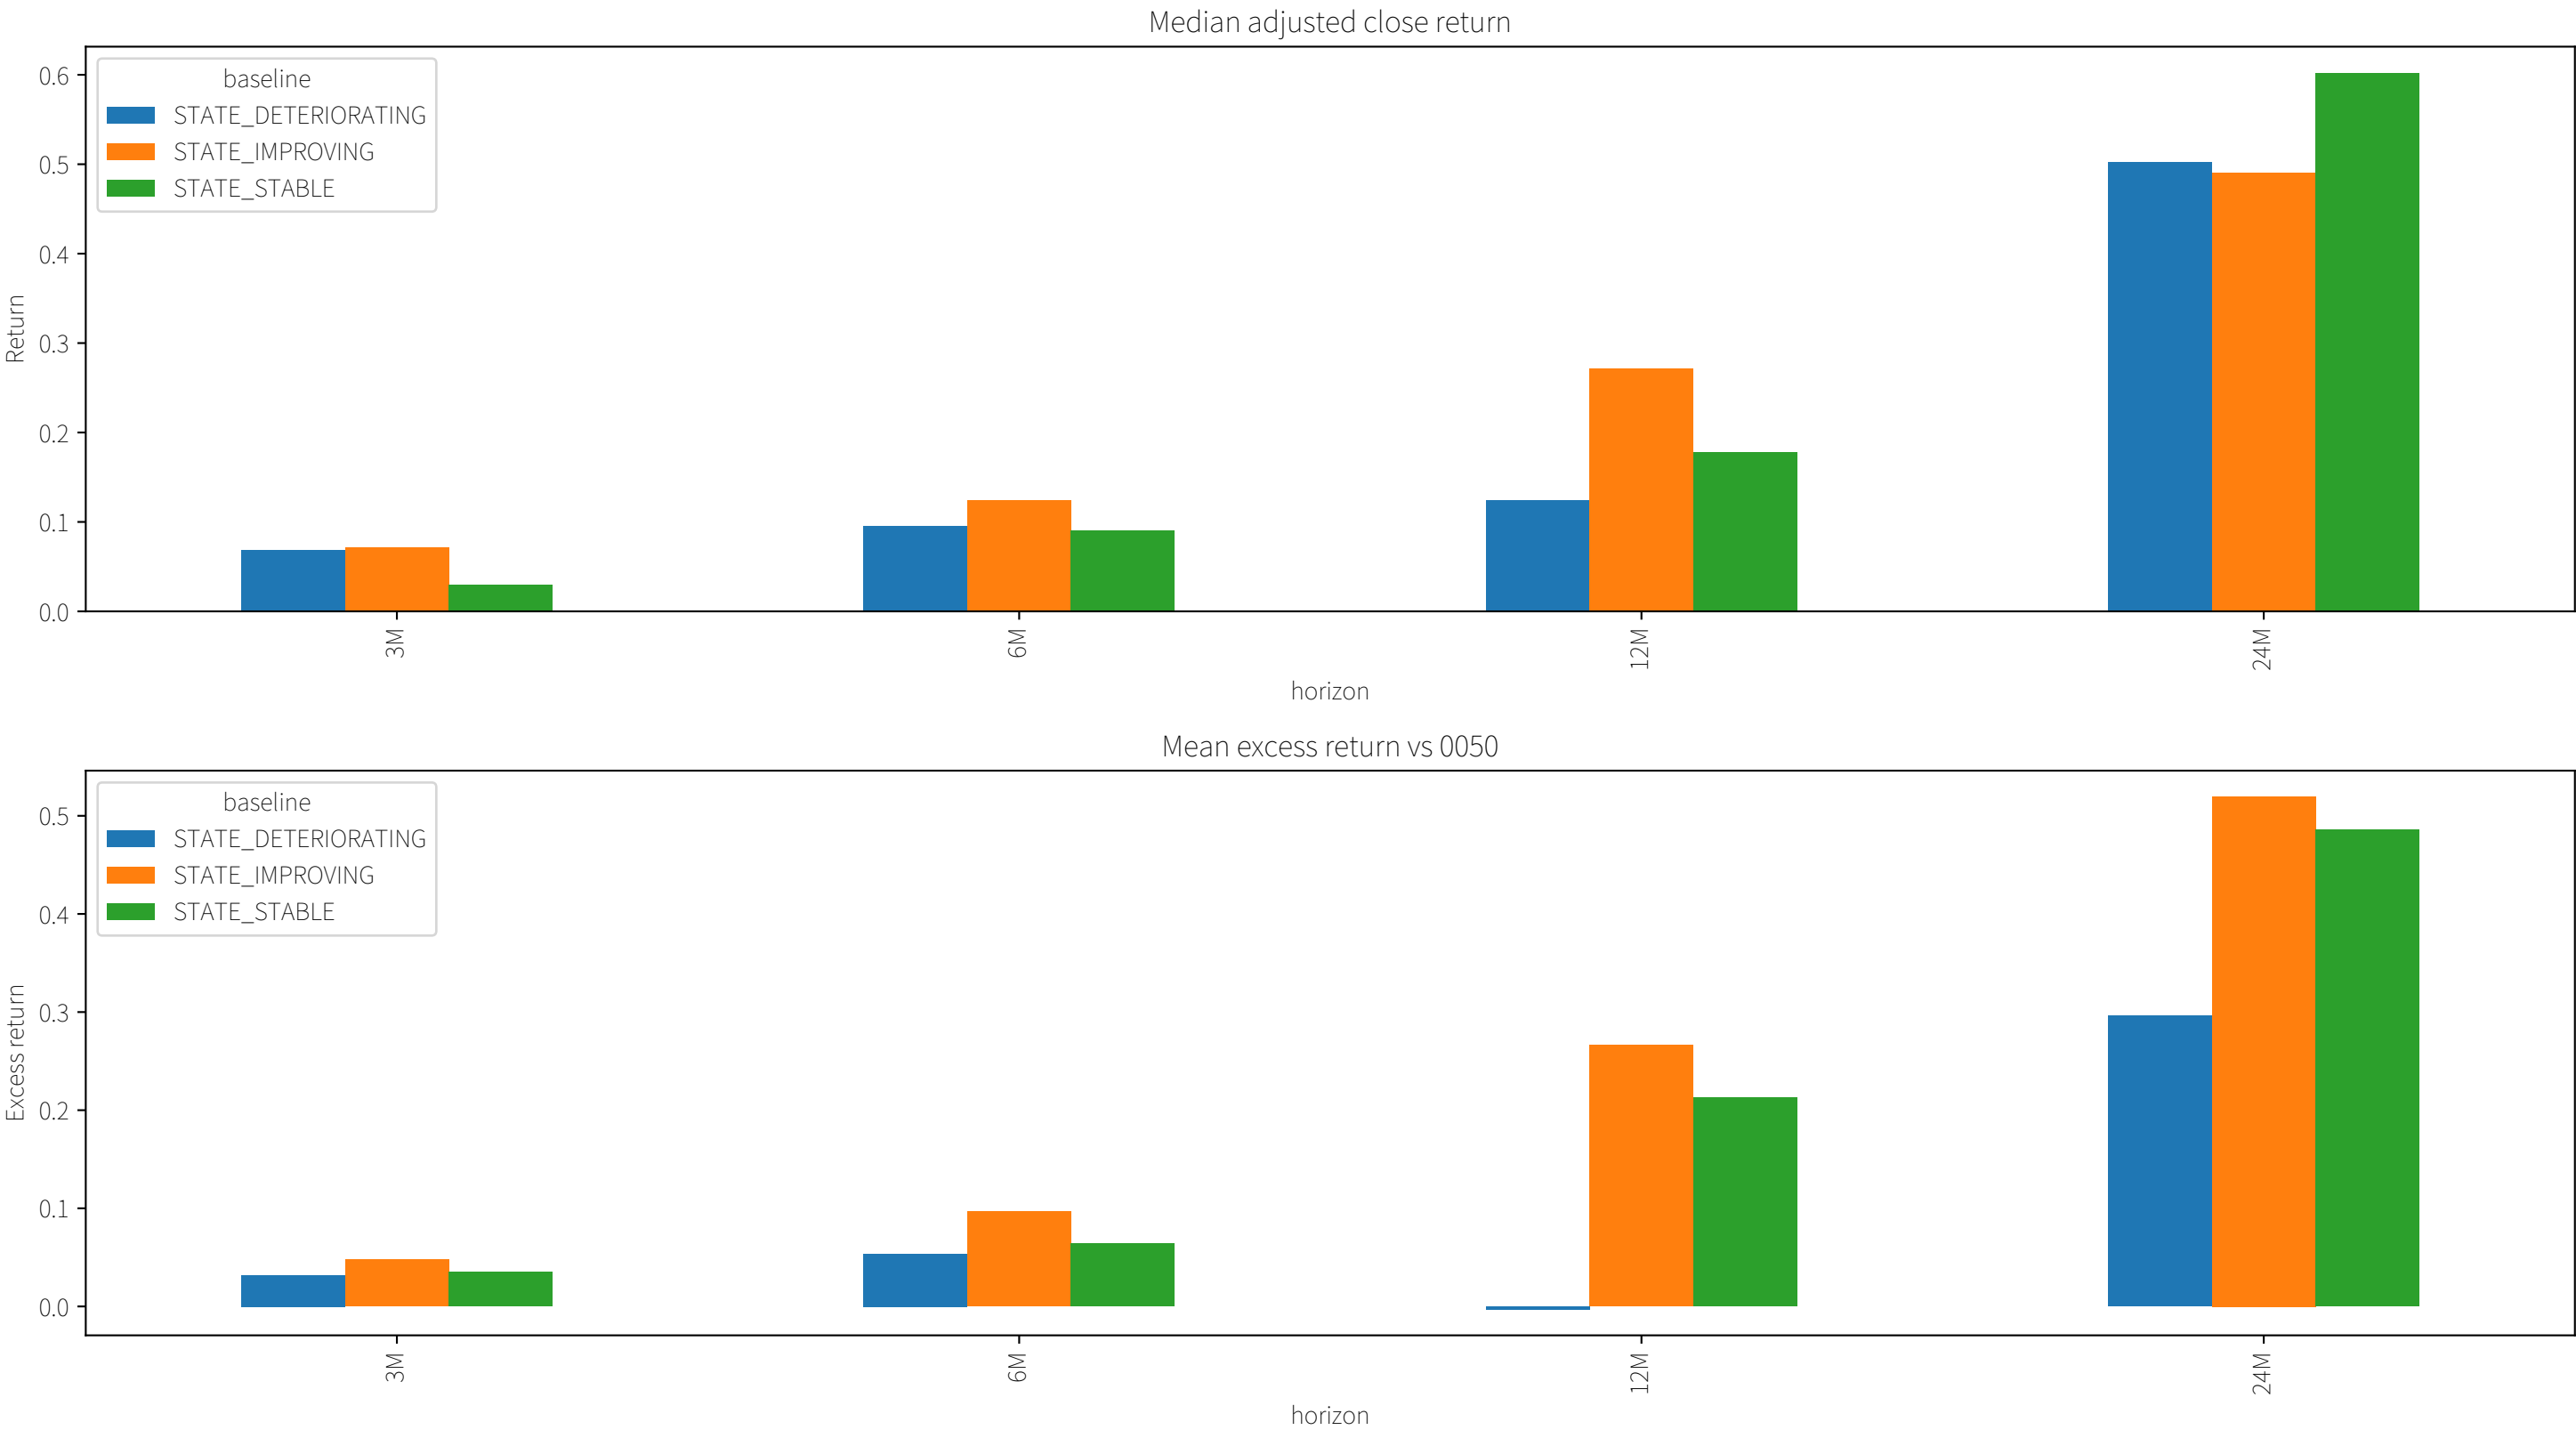

Realized labels use future published fundamentals for evaluation only; they never enter contemporaneous signals.

Layer 2 — Downstream Investment Relevance (Diagnostic Only)

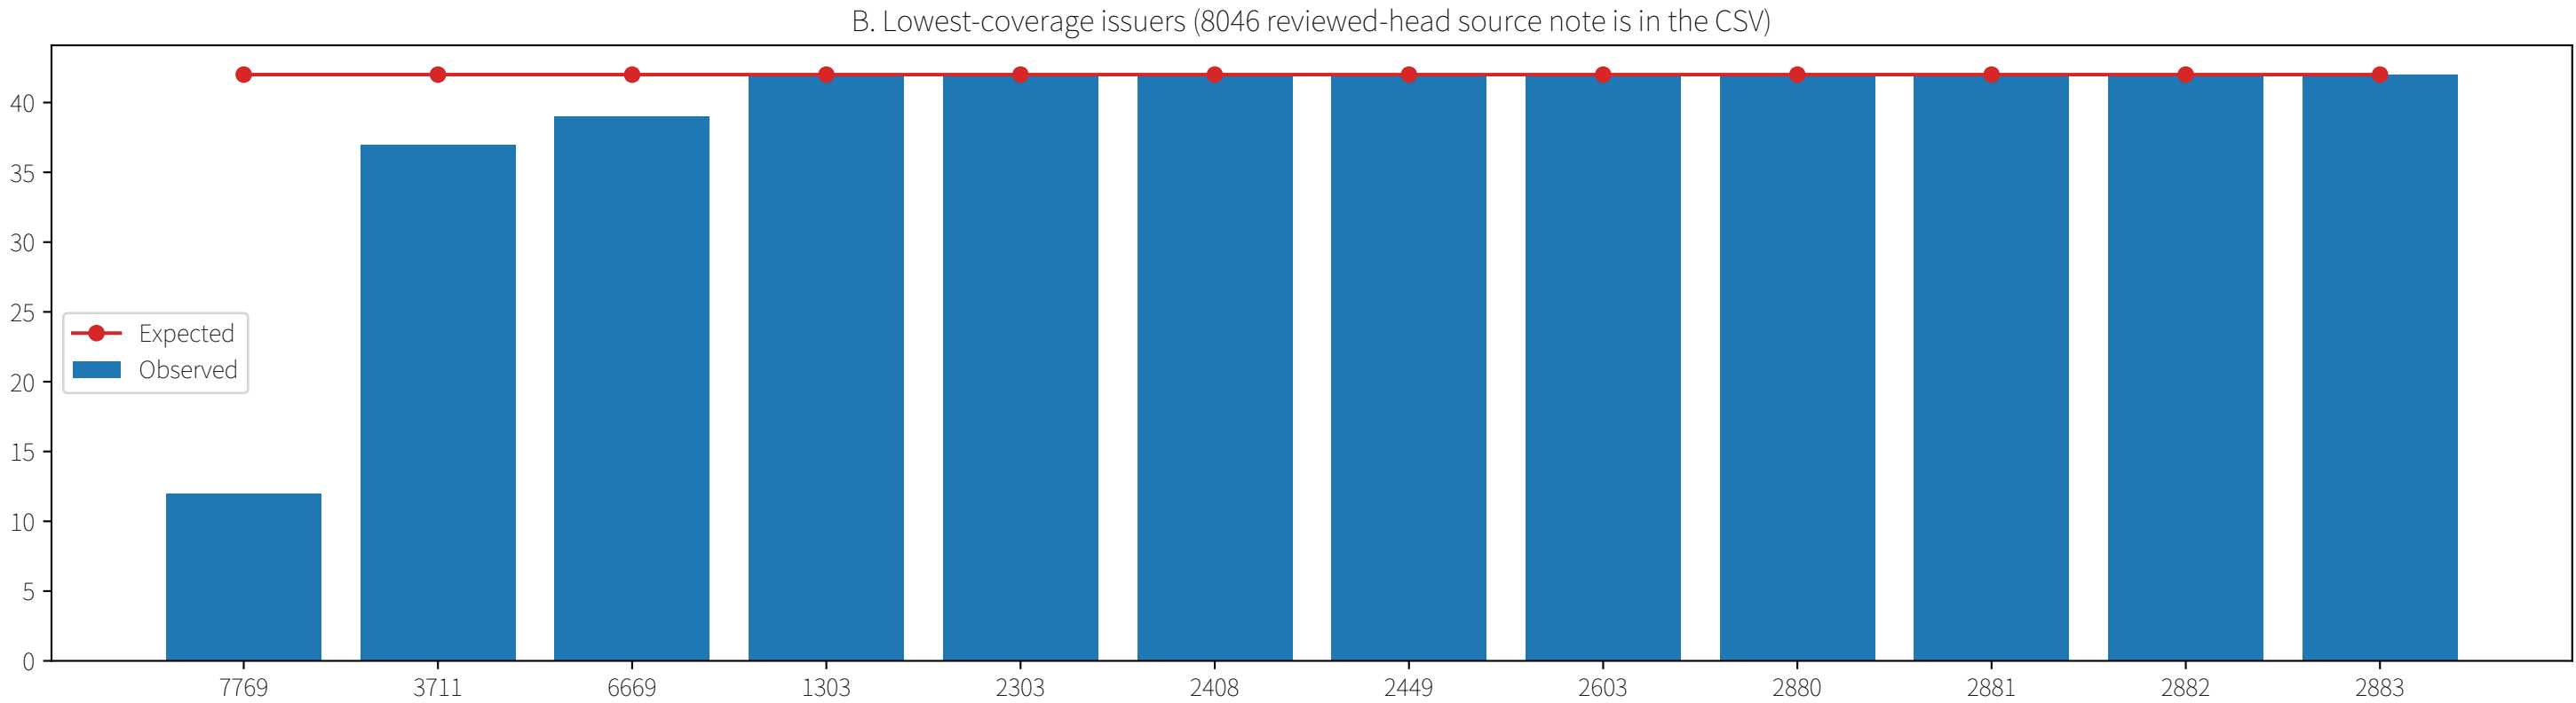

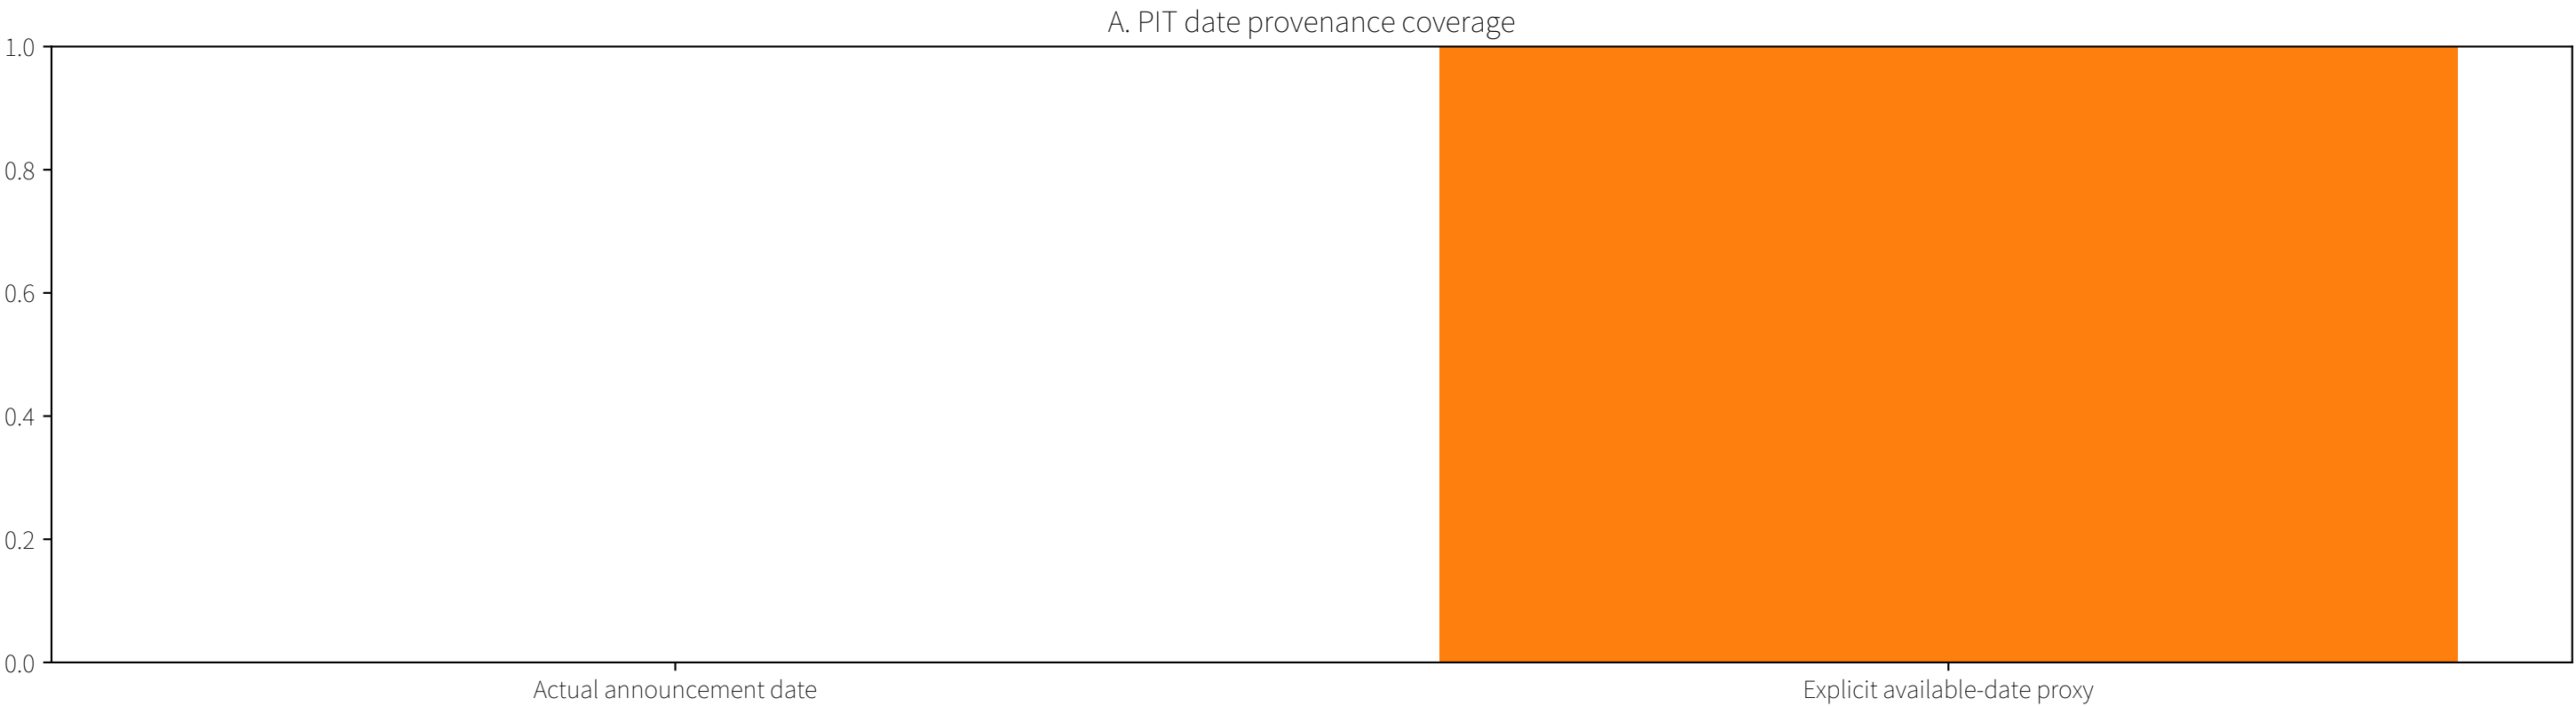

Events are non-IID; issuer- and time-cluster estimates are in CSV/JSON. Current constituents only: no historical 0050 strategy claim.

3M / 6M / 12M / 24M Return Diagnostics by Canonical State

Downstream diagnostic only. Returns do not define or tune Fundamental State.

PIT and Data-Quality Coverage

UNKNOWN / INSUFFICIENT is intentional when evidence is missing; no imputation is used to force a state.

Frozen Technical v0.6 Cross-display

NOT AVAILABLE IN THE INSPECTED REPOSITORY

The research branch does not recreate, tune, or alter Technical v0.6.
When an authenticated frozen output artifact is supplied, it may be joined by ticker and as-of date for display only.
No combined score or buy/sell signal will be produced.

Research Questions and Claim Boundary

Q1 Quality separation: descriptive output produced; formal discrimination requires cleaner PIT and sector data.

Q2 IMPROVING recognition: precision 67.7%, recall 34.1%; inspect support and confusion matrix.

Q3 GOOD persistence: compare the Quality Persistence table; missing future 3Y/5Y observations remain explicit.

Q4 Valuation outcomes: computed for LOW/NORMAL/HIGH, but secondary-source adjusted returns and survivorship bias prevent inference.

Q5 Full model vs baselines: 12M evaluable full-model observations = 32; IID and clustered estimates are reported.

Q6 Technical + fundamental: not evaluated because the frozen Technical v0.6 artifact was absent.

Conclusion boundary:

'The model can analyse a company' is assessed by state recognition, persistence, reasons, and data quality.

'The model predicts investment returns' requires historical constituents, verified filing timestamps, OOS evidence, and robust uncertainty tests.

This v0.1 run does not establish the second claim.
