

0050 Fundamental Quality & Valuation Model v0.1 — Executive Summary

Current constituents only. Historical tests carry survivorship bias, conservative filing-date proxies, and secondary-source adjusted returns.
No Fundamental Score, Quality Score, Technical Score, Total Score, or weighted ranking is produced.

0050 Current State Matrix (no composite score)

1. Price + fundamental-state transitions

2. Revenue / revenue growth

3. EPS / TTM EPS

4. Margins (%)

5. ROE / ROIC (%)

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

8. P/B / dividend yield

Quality: ROE, ROIC and operating margin meet the durable-profitability gate; Revenue and EPS grew over three years without contradictory FCF evidence; Operating cash flow supports earnings and free cash flow is persistent; Balance-sheet resilience gate is met | State: Revenue direction is weakening with EPS or margin-and-cash-flow deterioration | Valuation: P/E is in the lowest historical quartile with P/B or positive-FCF corroboration

1. Price + fundamental-state transitions

2. Revenue / revenue growth

3. EPS / TTM EPS

4. Margins (%)

5. ROE / ROIC (%)

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

8. P/B / dividend yield

Quality: Operating cash flow supports earnings and free cash flow is persistent; Balance-sheet resilience gate is met | State: Mixed fundamental directions do not satisfy a named state gate | Valuation: P/E and available P/B context are in the highest historical quartile

2059 川湖 | GOOD × MATURE_GROWTH × HIGH

1. Price + fundamental-state transitions

2. Revenue / revenue growth

3. EPS / TTM EPS

4. Margins (%)

5. ROE / ROIC (%)

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

8. P/B / dividend yield

Quality: ROE, ROIC and operating margin meet the durable-profitability gate; Revenue and EPS grew over three years without contradictory FCF evidence; Operating cash flow supports earnings and free cash flow is persistent; Balance-sheet resilience gate is met | State: Revenue and EPS growth have remained positive across eight observations | Valuation: P/E and available P/B context are in the highest historical quartile

2301 光寶科 | GOOD × CONFIRMED_GROWTH × HIGH

1. Price + fundamental-state transitions

2. Revenue / revenue growth

3. EPS / TTM EPS

4. Margins (%)

5. ROE / ROIC (%)

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

8. P/B / dividend yield

Quality: ROE, ROIC and operating margin meet the durable-profitability gate; Revenue and EPS grew over three years without contradictory FCF evidence; Operating cash flow supports earnings and free cash flow is persistent; Balance-sheet resilience gate is met | State: Revenue and EPS growth are positive across three observations | Valuation: P/E and available P/B context are in the highest historical quartile

2303 聯電 | ACCEPTABLE × UNKNOWN × HIGH

1. Price + fundamental-state transitions

2. Revenue / revenue growth

3. EPS / TTM EPS

4. Margins (%)

5. ROE / ROIC (%)

6. Operating cash flow / FCF (NT\$bn)

7. Historical P/E range

8. P/B / dividend yield

Quality: ROE, ROIC and operating margin meet the durable-profitability gate; Operating cash flow supports earnings and free cash flow is persistent; Balance-sheet resilience gate is met | State: Mixed fundamental directions do not satisfy a named state gate | Valuation: P/E and available P/B context are in the highest historical quartile

2308 台達電 | GOOD × TURNING_UP × HIGH

Quality: Free cash flow was positive in fewer than half of observed TTM periods | State: Revenue and EPS remain positive but have decelerated for three observations | Valuation: P/E is in the lowest historical quartile with P/B or positive-FCF corroboration

1. Price + fundamental-state transitions

INSUFFICIENT FINANCIAL HISTORY
5 PIT-available quarterly observations; at least 12 are required for quality classification.

Known observations remain in the CSV/JSON bundle.
Sparse series are intentionally not connected into potentially misleading charts.

1. Price + fundamental-state transitions

INSUFFICIENT FINANCIAL HISTORY

5 PIT-available quarterly observations; at least 12 are required for quality classification.

Known observations remain in the CSV/JSON bundle.
Sparse series are intentionally not connected into potentially misleading charts.

Representative Cases — selection is descriptive, not a ranking

Required case	Selected observation	Why / availability
GOOD + TURNING_UP + LOW	No current case	No observation satisfies the pre-registered case
GOOD + TURNING_UP + HIGH	2308 台達電	P/E and available P/B context are in the highest historical quartile
GOOD + CONFIRMED_GROWTH	2301 光寶科	P/E and available P/B context are in the highest historical quartile
Possible Value Trap	1216 統一	P/E is in the lowest historical quartile with P/B or positive-FCF corroboration
Cyclical Low-P/E Trap	2344 華邦電	Normalized P/E is above the historical upper quartile; Current P/E is materially below normalized P/E; peak-earnings distortion is possible
Financial-sector special case	2880 華南金	P/B is in the highest historical quartile
TURNING_UP correct historical case	1216 統一 (2022-08-29)	CORRECT
TURNING_UP incorrect historical case	1216 統一 (2022-11-29)	FALSE_RECOVERY

Historical Validation — provisional evidence

These are analysis-quality diagnostics. They do not establish investment prediction.

Valuation Outcomes and Required Baselines

Secondary-source adjusted returns and current-universe survivorship bias prohibit a predictive claim.

Frozen Technical v0.6 Cross-display

NOT AVAILABLE IN THE INSPECTED REPOSITORY

The research branch does not recreate, tune, or alter Technical v0.6.
When an authenticated frozen output artifact is supplied, it may be joined by ticker and as-of date for display only.
No combined score or buy/sell signal will be produced.

Research Questions and Claim Boundary

Q1 Quality separation: descriptive output produced; formal discrimination requires cleaner PIT and sector data.

Q2 TURNING_UP recognition: provisional correct share = 23.1%; inspect sample counts and label definitions.

Q3 GOOD persistence: compare the Quality Persistence table; missing future 3Y/5Y observations remain explicit.

Q4 Valuation outcomes: computed for LOW/NORMAL/HIGH, but secondary-source adjusted returns and survivorship bias prevent inference.

Q5 Full model vs baselines: 1Y evaluable full-model observations = 48; confidence intervals are reported.

Q6 Technical + fundamental: not evaluated because the frozen Technical v0.6 artifact was absent.

Conclusion boundary:

'The model can analyse a company' is assessed by state recognition, persistence, reasons, and data quality.

'The model predicts investment returns' needs adjusted returns, historical constituents, verified filing timestamps, OOS evidence, and uncertainty tests.

This v0.1 run does not establish the second claim.
